ONE of the most delightful books in my father's library was White's "Natural History of Selborne." For me it has rather gained in charm with years. I used to read it without knowing the secret of the pleasure I found in it, but as I grow older I begin to detect some of the simple expedients of this natural magic. Open the book where you will, it takes you out of doors. In our broiling July weather one can walk out with this genially garrulous Fellow of Oriel and find refreshment instead of fatigue. You have no trouble in keeping abreast of him as he ambles along on his hobby-horse, now pointing to a pretty view, now stopping to watch the motions of a bird or an insect, or to bag a specimen for the Honorable Daines Barrington or Mr. Pennant. In simplicity of taste and natural refinement he reminds one of Walton; in tenderness toward what he would have called the brute creation, of Cowper. I do not know whether his descriptions of scenery are good or not, but they have made me familiar with his neighborhood. Since I first read him, I have walked over some of his favorite haunts, but I still see them through his eyes rather than by any recollection of actual and personal vision. The book has also the delightfulness of absolute leisure. Mr. White seems never to have had any harder work to do than to study the habits of his feathered fellow-townsfolk, or to watch the ripening of his peaches on the wall. His volumes are the journal of Adam in Paradise,

"Annihilating all that's made
To a green thought in a green shade."

It is positive rest only to look into that garden of his. It is vastly better than to

"See great Diocletian walk
In the Salonian garden's noble shade,"

for thither ambassadors intrude to bring with them the noises of Rome, while here the world has no entrance. No rumor of the revolt of the American Colonies seems to have reached him. "The natural term of an hog's life" has more interest for him than that of an empire. Burgoyne may surrender and welcome; of what consequence is *that* compared with the fact that we can explain the odd tumbling of rooks in the air by their turning over "to scratch themselves with one claw"? All the couriers in Europe spurring rowel-deep make no stir in Mr. White's little Chartreuse;(1) but the arrival of the house-martin a day earlier or later than last year is a piece of news worth sending express to all his correspondents.

(1) *La Grande Chartreuse* was the original Carthusian monastery in France, where the most austere privacy was maintained. Another secret charm of this book is its inadvertent humor, so much the more delicious because unsuspected by the author. How pleasant is his innocent vanity in adding to the list of the British, and still more of the Selbornian, *fauna!* I believe he would gladly have consented to be eaten by a tiger or a crocodile, if by that means the occasional presence within the parish limits of either of these anthropophagous brutes could have been established. He brags of no fine society, but is plainly a little elated by "having considerable acquaintance with a tame brown owl." Most of us have known our share of owls, but few can boast of intimacy with a feathered one. The great events of Mr. White's life, too, have that disproportionate importance which is always humorous. To

My Garden Acquaintance

think of his hands having actually been though worthy (as neither Willoughby's nor Ray's were) to hold a stilted plover, the *Charadrius himaniopus,* with no back toe, and therefore "liable, in speculation, to perpetual vacillations"! I wonder, by the way, if metaphysicians have no hind toes. In 1770 he makes the acquaintance in Sussex of "an old family tortoise," which had then been domesticated for thirty years. It is clear that he fell in love with it at first sight. We have no means of tracing the growth of his passion; but in 1780 we find him eloping with its object in a post-chaise. "The rattle and hurry of the journey so perfectly roused it that, when I turned it out in a border, it walked twice down to the bottom of my garden." It reads like a Court Journal: "Yesterday morning H.R.H. the Princess Alice took an airing of half an hour on the terrace of Windsor Castle." This tortoise might have been a member of the Royal Society, if he could have condescended to so ignoble an ambition. It had but just been discovered that a surface inclined at a certain angle with the plane of the horizon took more of the sun's rays. The tortoise had always known this (though he unostentatiously made no parade of it), and used accordingly to tilt himself up against the garden-wall in the autumn. He seems to have been more of a philosopher than even Mr. White himself, caring for nothing but to get under a cabbage-leaf when it rained, or the sun was too hot, and to bury himself alive before frost,—a four-footed Diogenes, who carried his tub on his back.

There are moods in which this kind of history is infinitely refreshing. These creatures whom we affect to look down upon as the drudges of instinct are members of a commonwealth whose constitution rests on immovable bases. never any need of reconstruction there! *They* never dream of settling it by vote that eight hours are equal to ten, or that one creature is as clever as another and no more. *They* do not use their poor wits in regulating God's clocks, nor think they cannot go astray so long as they carry their guide-board about with them,—a delusion we often practise upon ourselves with our high and mighty reason, that admirable finger-post which points every way and always right. It is good for us now and then to converse with a world like Mr. White's, where Man is the least important of animals. But one who, like me, has always lived in the country and always on the same spot, is drawn to his book by other occult sympathies. Do we not share his indignation at that stupid Martin who had graduated his thermometer no lower than 40 above zero of Fahrenheit, so that in the coldest weather ever known the mercury basely absconded into the bulb, and left us to see the victory slip through our fingers, just as they were closing upon it? No man, I suspect, ever lived long in the country without being bitten by these meteorological ambitions. He likes to be hotter and colder, to have been more deeply snowed up, to have more trees and larger blow down than his neighbors. With us descendants of the Puritans especially, these weather-competitions supply the abnegated excitement of the race-course. Men learn to value thermometers of the true imaginative temperament, capable of prodigious elations and corresponding dejections. The other day (5th July) I marked 980 in the shade, my high water mark, higher by one degree than I had ever seen it before. I happened to meet a neighbor; as we mopped our brows at each other, he told me that he had just cleared 1000, and I went home a beaten man. I had not felt the heat before, save as a beautiful exaggeration of sunshine; but now it oppressed me with the prosaic vulgarity of an oven. What had been poetic intensity became all at once rhetorical hyperbole. I might suspect his thermometer (as indeed I did, for we Harvard men are apt to think ill of any graduation but our own); but it was a poor consolation. The fact remained that his herald Mercury, standing a tiptoe, could look down on mine. I seem to glimpse something of this familiar weakness in Mr. White. He, too, has shared in these mercurial triumphs and defeats. Nor do I doubt that he had a true country-gentleman's interest in the weather-cock; that his first question on coming down of a morning was, like Barabas's,

"Into what quarter peers my halcyon's bill?"

It is an innocent and healthful employment of the mind, distracting one from too continual study of himself, and leading him to dwell rather upon the indigestions of the elements than his own. "Did the wind back round, or go about with the sun?" is a rational question that bears not remotely on the making of hay and the prosperity of crops. I have little doubt that the regulated observation of the vane in many different places, and the interchange of results by telegraph, would put the weather, as it were, in our power, by betraying its ambushes before it is ready to give the assault. At first sight, nothing seems more drolly trivial than the lives of those whose single achievement is to record the wind and the temperature three times a day. Yet such men are doubtless sent into the world for this special end, and perhaps there is no kind of accurate observation, whatever its object, that has not

My Garden Acquaintance

its final use and value for some one or other. It is even to be hoped that the speculations of our newspaper editors and their myriad correspondence upon the signs of the political atmosphere may also fill their appointed place in a well-regulated universe, if it be only that of supplying so many more jack-o'-lanterns to the future historian. Nay, the observations on finance of an M.C. whose sole knowledge of the subject has been derived from a life-long success in getting a living out of the public without paying any equivalent therefor, will perhaps be of interest hereafter to some explorer of our *cloaca maxima,* whenever it is cleansed.

For many years I have been in the habit of noting down some of the leading events of my embowered solitude, such as the coming of certain birds and the like,—a kind of *memoires pour servir,* after the fashion of White, rather than properly digested natural history. I thought it not impossible that a few simple stories of my winged acquaintances might be found entertaining by persons of kindred taste.

There is a common notion that animals are better meteorologists than men, and I have little doubt that in immediate weather-wisdom they have the advantage of our sophisticated senses (though I suspect a sailor or shepherd would be their match), but I have seen nothing that leads me to believe their minds capable of erecting the horoscope of a whole season, and letting us know beforehand whether the winter will be severe or the summer rainless. I more than suspect that the clerk of the weather himself does not always know very long in advance whether he is to draw an order for hot or cold, dry or moist, and the musquash is scarce likely to be wiser. I have noted but two days' difference in the coming of the song-sparrow between a very early and a very backward spring. This very year I saw the linnets at work thatching, just before a snow-storm which covered the ground several inches deep for a number of days. They struck work and left us for a while, no doubt in search of food. Birds frequently perish from sudden changes in our whimsical spring weather of which they had no foreboding. More than thirty years ago, a cherry-tree, then in full bloom, near my window, was covered with humming-birds benumbed by a fall of mingled rain and snow, which probably killed many of them. It should seem that their coming was dated by the height of the sun, which betrays them into unthrifty matrimony;

"So priketh hem Nature in hir corages;"(1)

but their going is another matter. The chimney swallows leave us early, for example, apparently so soon as their latest fledglings are firm enough of wing to attempt the long rowing-match that is before them. On the other hand the wild-geese probably do not leave the North till they are frozen out, for I have heard their bugles sounding southward so late as the middle of December. What may be called local migrations are doubtless dictated by the chances of food. I have once been visited by large flights of cross-bills; and whenever the snow lies long and deep on the ground, a flock of cedar-birds comes in mid-winter to eat the berries on my hawthorns. I have never been quite able to fathom the local, or rather geographical partialities of birds. never before this summer (1870) have the king-birds, handsomest of flycatchers, built in my orchard; though I always know where to find them within half a mile. The rose-breasted grosbeak has been a familiar bird in Brookline (three miles away), yet I never saw one here till last July, when I found a female busy among my raspberries and surprisingly bold. I hope she was *prospecting* with a view to settlement in our garden. She seemed, on the whole, to think well of my fruit, and I would gladly plant another bed if it would help to win over so delightful a neighbor.

(1) Chaucer's *Canterbury Tales, Prologue,* line 11.

The return of the robin is commonly announced by the newspapers, like that of eminent or notorious people to a watering-place, as the first authentic notification of spring. And such his appearance in the orchard and garden undoubtedly is. But, in spite of his name of migratory thrush, he stays with us all winter, and I have seen him when the thermometer marked 15 degrees below zero of Fahrenheit, armed impregnably within,(1) like Emerson's Titmouse, and as cheerful as he. The robin has a bad reputation among people who do not value themselves less for being fond of cherries. There is, I admit, a spice of vulgarity in him, and his song is rather of the Bloomfield sort, too largely ballasted with prose. His ethics are of the Poor Richard school, and the main chance which calls forth all his energy is altogether of the belly. He never has these fine intervals of lunacy into which his cousins, the catbird and the mavis, are apt to fall. But for a' that and twice as muckle 's a' that, I would not exchange him for all the cherries that ever came out of Asia Minor. With whatever faults, he has not wholly forfeited that superiority which belongs to the children of nature. He has a finer taste in fruit than could be distilled from many

My Garden Acquaintance

successive committees of the Horticultural Society, and he eats with a relishing gulp not inferior to Dr. Johnson's. He feels and freely exercises his right of eminent domain. His is the earliest mess of green peas; his all the mulberries I had fancied mine. But if he get also the lion's share of the raspberries, he is a great planter, and sows those wild ones in the woods that solace the pedestrian, and give a momentary calm even to the jaded victims of the White Hills. he keeps a strict eye over one's fruit, and knows to a shade of purple when your grapes have cooked long enough in the sun. During the severe drought a few years ago the robins wholly vanished from my garden. I neither saw nor heard one for three weeks. meanwhile a small foreign grape-vine, rather shy of bearing, seemed to find the dusty air congenial, and, dreaming, perhaps of its sweet Argos across the sea, decked itself with a score or so of fair bunches. I watched them from day to day till they should have secreted sugar enough from the sunbeams, and at last made up my mind that I would celebrate my vintage the next morning. But the robins, too, had somehow kept note of them. They must have sent out spies, as did the Jews into the promised land, before I was stirring. When I went with my basket at least a dozen of these winged vintagers bustled out from among the leaves, and alighting on the nearest trees interchanged some shrill remarks about me of a derogatory nature. They had fairly sacked the vine. Not Wellington's veterans made cleaner work of a Spanish town; not Federals or Confederates were ever more impartial in the confiscation of neutral chickens. I was keeping my grapes a secret to surprise the fair Fidele with, but the robins made them a profounder secret to her than I had meant. The tattered remnant of a single bunch was all my harvest-home. How paltry it looked at the bottom of my basket,—as if a humming-bird had laid her egg in an eagle's nest! I could not help laughing; and the robins seemed to join heartily in the merriment. There was a native grape-vine close by, blue with its less refined abundance, but my cunning thieves preferred the foreign flavor. Could I tax them with want of taste?

(1) "For well the soul, if stout within,
Can arm impregnably the skin."
The Titmouse, lines 75, 76.

The robins are not good solo singers, but their chorus, as, like primitive fire-worshippers, they hail the return of light and warmth to the world, is unrivalled. There are a hundred singing like one. They are noisy enough then, and sing, as poets should, with no afterthought. But when they come after cherries to the tree near my window, they muffle their voices, and their faint *pip pip pop!* sounds far away at the bottom of the garden, where they know I shall not suspect them of robbing the great black-walnut of its bitter-rinded store.(1) They are feathered Pecksniffs, to be sure, but then how brightly their breasts, that look rather shabby in the sunlight, shine in a rainy day against the dark green of the fringe-tree! After they have pinched and shaken all the life of an earthworm, as Italian cooks pound all the spirit out of a steak, and then gulped him, they stand up in honest self-confidence, expand their red waistcoats with the virtuous air of a lobby member, and outface you with an eye that calmly challenges inquiry. "Do *I* look like a bird that knows the flavor of raw vermin? I throw myself upon a jury of my peers. Ask any robin if he ever ate anything less ascetic than the frugal berry of the juniper, and he will answer that his vow forbids him." Can such an open bosom cover such depravity? Alas, yes! I have no doubt his breast was redder at that very moment with the blood of my raspberries. On the whole, he is a doubtful friend in the garden. He makes his dessert of all kinds of berries, and is not averse from early pears. But when we remember how omnivorous he is, eating his own weight in an incredibly short time, and that Nature seems exhaustless in her invention of new insects hostile to vegetation, perhaps we may reckon that he does more good than harm. For my own part, I would rather have his cheerfulness and kind neighborhood than many berries.

(1) The screech-owl, whose cry, despite his ill name, is one of the sweetest sounds in nature, softens his voice in the same way with the most beguiling mockery of distance. J.R.L.

For his cousin, the catbird, I have a still warmer regard. Always a good singer, he sometimes nearly equals the brown thrush, and has the merit of keeping up his music later in the evening than any bird of my familiar acquaintance. Ever since I can remember, a pair of them have built in a gigantic syringa near our front door, and I have known the male to sing almost uninterruptedly during the evenings of early summer till twilight duskened into dark. They differ greatly in vocal talent, but all have a delightful way of crooning over, and, as it were, rehearsing their song in an undertone, which makes their nearness always unobtrusive. Though there is the most

My Garden Acquaintance

trustworthy witness to the imitative propensity of this bird, I have only once, during an intimacy of more than forty years, heard him indulge it. In that case, the imitation was by no means so close as to deceive, but a free reproduction of the notes of some other birds, especially of the oriole, as a kind of variation in his own song. The catbird is as shy as the robin is vulgarly familiar. Only when his nest or his fledglings are approached does he become noisy and almost aggressive. I have known him to station his young in a thick cornel-bush on the edge of the raspberry-bed, after the fruit began to ripen, and feed them there for a week or more. In such cases he shows none of that conscious guilt which makes the robin contemptible. On the contrary, he will maintain his post in the thicket, and sharply scold the intruder who ventures to steal *his* berries. After all, his claim is only for tithes, while the robin will bag your entire crop if he get a chance.

Dr. Watts's statement that "birds in their little nests agree," like too many others intended to form the infant mind, is very far from being true. On the contrary, the most peaceful relation of the different species to each other is that of armed neutrality. they are very jealous of neighbors. A few years ago I was much interested in the housebuilding of a pair of summer yellow-birds. They had chosen a very pretty site near the top of a tall white lilac, within easy eye-shot of a chamber window. A very pleasant thing it was to see their little home growing with mutual help, to watch their industrious skill interrupted only by little flirts and snatches of endearment, frugally cut short by the common-sense of the tiny house-wife. They had brought their work nearly to an end, and had already begun to line it with fern-down, the gathering of which demanded more distant journeys and longer absences. But, alas! the syringa, immemorial manor of the catbirds, was not more than twenty feet away, and these "giddy neighbors" had, as it appeared, been all along jealously watchful, though silent, witnesses of what they deemed an intrusion of squatters. No sooner were the pretty mates fairly gone for a new load of lining, than

"To their unguarded nest these weasel Scots
Came stealing." (1)

Silently they flew back and forth, each giving a vengeful dab at the nest in passing. They did not fall-to and deliberately destroy it, for they might have been caught at their mischief. As it was, whenever the yellow-birds came back, their enemies were hidden in their own sight-proof bush. Several times their unconscious victims repaired damages, but at length, after counsel taken together, they gave it up. Perhaps, like other unlettered folk, they came to the conclusion that the Devil was in it, and yielded to the invisible persecution of witchcraft.

(1) Shakespeare: *King Henry V.,* act i, scene 2.

The robins, by constant attacks and annoyances, have succeeded in driving off the blue-jays who used to build in our pines, their gay colors and quaint, noisy ways making them welcome and amusing neighbors. I once had the chance of doing a kindness to a household of them, which they received with very friendly condescension. I had had my eye for some time upon a nest, and was puzzled by a constant fluttering of what seemed full-grown wings in it whenever I drew nigh. At last I climbed the tree, in spite of angry protests from the old birds against my intrusion. The mystery had a very simple solution. In building the nest, a long piece of packthread had been somewhat loosely woven in. Three of the young had contrived to entangle themselves in it, and had become full-grown without being able to launch themselves upon the air. One was unharmed; another had so tightly twisted the cord about its shank that one foot was curled up and seemed paralyzed; the third, in its struggles to escape, had sawn through the flesh of the thigh and so much harmed itself that I thought it humane to put an end to its misery. When I took out my knife to cut their hempen bonds, the heads of the family seemed to divine my friendly intent. Suddenly ceasing their cries and threats. they perched quietly within reach of my hand, and watched me in my work of manumission. This, owing to the fluttering terror of the prisoners, was an affair of some delicacy; but ere long I was rewarded by seeing one of them fly away to a neighboring tree, while the cripple, making a parachute of his wings, came lightly to the ground, and hopped off as well as he could with one leg, obsequiously waited on by his elders. A week later I had the satisfaction of meeting him in the pine-walk, in good spirits, and already so far recovered as to be able to balance himself with the lame foot. I have no doubt that in his old age he accounted for his lameness by some handsome story of a wound received at the famous Battle of the Pines, when our tribe, overcome by numbers, was driven from its ancient camping-ground. Of late years the

My Garden Acquaintance

jays have visited us only at intervals; and in winter their bright plumage, set off by the snow, and their cheerful cry, are especially welcome. They would have furnished Aesop with a fable, for the feathered crest in which they seem to take so much satisfaction is often their fatal snare. Country boys make a hole with their finger in the snow-crust just large enough to admit the jay's head, and, hollowing it out somewhat beneath, bait it with a few kernels of corn. The crest slips easily into the trap, but refuses to be pulled out again, and he who came to feast remains a prey.

Twice have the crow-blackbirds attempted a settlement in my pines, and twice have the robins, who claim a right of preemption, so successfully played the part of border-ruffians as to drive them away,—to my great regret, for they are the best substitute we have for rooks. At Shady Hill(1) (now, alas! empty of its so long-loved household) they build by hundreds, and nothing can be more cheery than their creaking clatter (like a convention of old-fashioned tavern-signs) as they gather at evening to debate in mass meeting their windy politics, or to gossip at their tent-doors over the events of the day. Their port is grave, and their stalk across the turf as martial as that of a second-rate ghost in Hamlet. They never meddled with my corn, so far as I could discover.

(1) The home of the Nortons, in Cambridge, who were at the time of this paper in Europe.

For a few years I had crows, but their nests are an irresistible bait for boys, and their settlement was broken up. They grew so wonted as to throw off a great part of their shyness, and to tolerate my near approach. One very hot day I stood for some time within twenty feet of a mother and three children, who sat on an elm bough over my head gasping in the sultry air, and holding their wings half-spread for coolness. All birds during the pairing season become more or less sentimental, and murmur soft nothings in a tone very unlike the grinding-organ repetition and loudness of their habitual song. The crow is very comical as a lover, and to hear him trying to soften his croak to the proper Saint Preux(1) standard has something the effect of a Mississippi boatman quoting Tennyson. Yet there are few things to my ear more melodious than his caw of a clear winter morning as it drops to you filtered through five hundred fathoms of crisp blue air. The hostility of all smaller birds makes the moral character of the row, for all his deaconlike demeanor and garb, somewhat questionable. He could never sally forth without insult. The golden robins, especially, would chase him as far as I could follow with my eye, making him duck clumsily to avoid their importunate bills. I do not believe, however, that he robbed any nests hereabouts, for the refuse of the gas-works, which, in our free-and-easy community, is allowed to poison the river, supplied him with dead alewives in abundance. I used to watch him making his periodical visits to the salt-marshes and coming back with a fish in his beak to his young savages, who, no doubt, like it in that condition which makes it savory to the Kanakas and other corvine races of men.

(1) See Rousseau's **La Nouvelle Heloise.**

Orioles are in great plenty with me. I have seen seven males flashing about the garden at once. A merry crew of them swing their hammocks from the pendulous boughs. During one of these later years, when the canker-worms stripped our elms as bare as winter, these birds went to the trouble of rebuilding their unroofed nests, and chose for the purpose trees which are safe from those swarming vandals, such as the ash and the button-wood. One year a pair (disturbed, I suppose, elsewhere) built a second nest in an elm within a few yards of the house. My friend, Edward E. Hale, told me once that the oriole rejected from his web all strands of brilliant color, and I thought it a striking example of that instinct of concealment noticeable in many birds, though it should seem in this instance that the nest was amply protected by its position from all marauders but owls and squirrels. Last year, however, I had the fullest proof that Mr. Hale was mistaken. A pair of orioles built on the lowest trailer of a weeping elm, which hung within ten feet of our drawing-room window, and so low that I could reach it from the ground. The nest was wholly woven and felted with ravellings of woollen carpet in which scarlet predominated. Would the same thing have happened in the woods? Or did the nearness of a human dwelling perhaps give the birds a greater feeling of security? They are very bold, by the way, in quest of cordage, and I have often watched them stripping the fibrous bark from a honeysuckle growing over the very door. But, indeed, all my birds look upon me as if I were a mere tenant at will, and they were landlords. With shame I confess it, I have been bullied even by a hummingbird. This spring, as I was cleansing a pear-tree of its lichens, one of these little zigzagging blurs came purring toward me, couching his long bill like a lance, his throat sparkling with angry fire, to warn me off from a Missouri-currant whose honey he was sipping. And many a time he has driven me out of a flower-bed. This summer, by the way, a pair of these winged emeralds fastened their mossy acorn-cup upon a bough of the same elm which the orioles had enlivened the year before. We watched all their proceedings from

My Garden Acquaintance

the window through an opera-glass, and saw their two nestlings grow from black needles with a tuft of down at the lower end, till they whirled away on their first short experimental flights. They became strong of wing in a surprisingly short time, and I never saw them or the male bird after, though the female was regular as usual in her visits to our petunias and verbenas. I do not think it ground enough for a generalization, but in the many times when I watched the old birds feeding their young, the mother always alighted, while the father as uniformly remained upon the wing.

The bobolinks are generally chance visitors, tinkling through the garden in blossoming-time, but this year, owing to the long rains early in the season, their favorite meadows were flooded, and they were driven to the upland. So I had a pair of them domiciled in my grass field. The male used to perch in an apple-tree, then in full bloom, and, while I stood perfectly still close by, he would circle away, quivering round the entire field of five acres, with no break in his song, and settle down again among the blooms, to be hurried away almost immediately by a new rapture of music. He had the volubility of an Italian charlatan at a fair, and, like him, appeared to be proclaiming the merits of some quack remedy. *Opodeldoc-opodeldoc-try-Doctor-Lincoln's-opodeldoc!* he seemed to repeat over and over again, with a rapidity that would have distanced the deftest-tongued Figaro that ever rattled. I remember Count Gurowski saying once, with that easy superiority of knowledge about this country which is the monopoly of foreigners, that we had no singing-birds! Well, well, Mr. Hepworth Dixon(1) has found the typical America in Oneida and Salt Lake City. Of course, an intelligent European is the best judge of these matters. The truth is there are more singing-birds in Europe because there are fewer forests. These songsters love the neighborhood of man because hawks and owls are rarer, while their own food is more abundant. Most people seem to think, the more trees, the more birds. Even Chateaubriand, who first tried the primitive-forest-cure, and whose description of the wilderness in its imaginative effects is unmatched, fancies the "people of the air singing their hymns to him." So far as my own observation goes, the farther one penetrates the sombre solitudes of the woods, the more seldom does he hear the voice of any singing-bird. In spite of Chateaubriand's minuteness of detail, in spite of that marvellous reverberation of the decrepit tree falling of its own weight, which he was the first to notice, I cannot help doubting whether he made his way very deep into the wilderness. At any rate, in a letter to Fontanes, written in 1804, he speaks of *mes chevaux paissant a quelque distance.* To be sure Chateaubriand was at to mount the high horse, and this may have been but an afterthought of the *grand seigneur,* but certainly one would not make much headway on horseback toward the druid fastnesses of the primaeval pine.

(1) In his book of travels, *New America.*

The bobolinks build in considerable numbers in a meadow within a quarter of a mile of us. A houseless land passes through the midst of their camp, and in clear westerly weather, at the right season, one may hear a score of them singing at once. When they are breeding, if I chance to pass, one of the male birds always accompanies me like a constable, flitting from post to post of the rail-fence, with a short note of reproof continually repeated, till I am fairly out of the neighborhood. Then he will swing away into the air and run down the wind, gurgling music without stint over the unheeding tussocks of meadow-grass and dark clumps of bulrushes that mark his domain.

We have no bird whose song will match the nightingale's in compass, none whose note is so rich as that of the European blackbird; but for mere rapture I have never heard the bobolink's rival. But his opera-season is a short one. The ground and tree sparrows are our most constant performers. It is now late in August, and one of the latter sings every day and all day long in the garden. Till within a fortnight, a pair of indigo-birds would keep up their lively *duo* for an hour together. While I write, I hear an oriole gay as in June, and the plaintive *may-be* of the goldfinch tells me he is stealing my lettuce-seeds. I know not what the experience of others may have been, but the only bird I have ever hard sing in the night has been the chip-bird. I should say he sang about as often during the darkness as cocks crow. One can hardly help fancying that he sings in his dreams.

"Father of light, what sunnie seed,
What glance of day hast thou confined
Into this bird? To all the breed
This busie ray thou hast assigned;
Their magnetism works all night,
And dreams of Paradise and light."

My Garden Acquaintance

On second thought, I remember to have heard the cuckoo strike the hours nearly all night with the regularity of a Swiss clock.

The dead limbs of our elms, which I spare to that end, bring us the flicker every summer, and almost daily I hear his wild scream and laugh close at hand, himself invisible. He is a shy bird, but a few days ago I had the satisfaction of studying him through the blinds as he sat on a tree within a few feet of me. Seen so near and at rest, he makes good his claim to the title of pigeon-woodpecker. Lumberers have a notion that he is harmful to timber, digging little holes through the bark to encourage the settlement of insects. The regular rings of such perforations which one may see in almost any apple-orchard seem to give some probability to this theory. Almost every season a solitary quail visits us, and, unseen among the currant bushes, alls *Bob White, Bob White,* as if he were playing at hide-and-seek with that imaginary being. A rarer visitant is the turtle-dove, whose pleasant coo (something like the muffled crow of a cock from a coop covered with snow) I have sometimes heard, and whom I once had the good luck to see close by me in the mulberry-tree. The wild-pigeon, once numerous, I have not seen for many years.(1) Of savage birds, a hen-hawk now and then quarters himself upon us for a few days, sitting sluggish in a tree after a surfeit of poultry. One of them once offered me a near shot from my study-window one drizzly day for several hours. But it was Sunday, and I gave him the benefit of its gracious truce of God.

(1) They made their appearance again this summer (1870).—J.R.L.

Certain birds have disappeared from our neighborhood within my memory. I remember when the whippoorwill could be heard in Sweet Auburn. The night-hawk, once common, is now rare. The brown thrush has moved farther up country. For years I have not seen or heard any of the larger owls, whose hooting was once of my boyish terrors. The cliff-swallow, strange emigrant, that eastward takes his way, has come and gone again in my time. The bank-swallows, wellnigh innumerable during my boyhood, no longer frequent the crumbly cliff of the gravel-pit by the river. The barn-swallows, which once swarmed in our barn, flashing through the dusty sun-streak of the mow, have been gone these many years. My father would lead me out to see them gather on the roof, and take counsel before their yearly migration, as Mr. White used to see them at Selborne. *Eheu fugaces!* Thank fortune, the swift still glues his nest, and rolls his distant thunders night and day in the wide-throated chimneys, still sprinkles the evening air with his merry twittering. The populous heronry in Fresh Pond meadows has wellnigh broken up, but still a pair or two haunt the old home, as the gypsies of Ellangowan their ruined huts, and every evening fly over us riverwards, clearing their throats with a hoarse hawk as they go, and, in cloudy weather, scarce higher than the tops of the chimneys. Sometimes I have known one to alight in one of our trees, though for what purpose I never could divine. Kingfishers have sometimes puzzled me in the same way, perched at high noon in a pine, springing their watchman's rattle when they flitted away from my curiosity, and seeming to shove their top-heavy heads along as a man does a wheelbarrow.

Some birds have left us, I suppose, because the country is growing less wild. I once found a summer duck's nest within a quarter of a mile of our house, but such a *trouvaille* would be impossible now as Kidd's treasure. And yet the mere taming of the neighborhood does not quite satisfy me as an explanation. Twenty years ago, on my way to bathe in the river, I saw every day a brace of woodcock, on the miry edge of a spring within a few rods of a house, and constantly visited by thirsty cows. There was no growth of any kind to conceal them, and yet these ordinarily shy birds were almost as indifferent to my passing as common poultry would have been. Since bird-nesting has become scientific, and dignified itself as oology, that, no doubt, is partly to blame for some of our losses. But some old friends are constant. Wilson's thrush comes every year to remind me of that most poetic or ornithologists. He flits before me through the pine-walk like the very genius of solitude. A pair of pewees have built immemorially on a jutting brick in the arched entrance to the ice-house; always on the same brick, and never more than a single pair, though two broods of five each are raised there every summer. How do they settle their claim to the homestead? By what right of primogeniture? Once the children of a man employed about the place *oologized* the nest, and the pewees left us for a year or two. I felt towards those boys as the messmates of the Ancient Mariner(1) did towards him after he had shot the albatross. But the pewees came back at last, and one of them is now on his wonted perch, so near my window that I can hear the click of his bill as he snaps a fly on the wing with the unerring precision a stately Trasteverina shows in the capture of her smaller deer. The pewee is the first bird to pipe up in the morning; and during the early summer he preludes his matutinal ejaculation of *pewee* with a slender whistle, unheard at any other time. He saddens with the season, and, as summer declines, he

My Garden Acquaintance

changes his note to *cheu, pewee!* as if in lamentation. Had he been an Italian bird, Ovid would have had a plaintive tale to tell about him. He is so familiar as often to pursue a fly through the open window into my library.

(1) In Coleridge's poem of that name.

There is something inexpressibly dear to me in these old friendships of a lifetime. There is scarce a tree of mine but has had, at some time or other, a happy homestead among its boughs, and to which I cannot say,

"Many light hearts and wings,
Which now be head, lodged in thy living bowers."

My walk under the pines would lose half its summer charm were I to miss that shy anchorite, the Wilson's thrush, nor hear in haying—time the metallic ring of his song, that justifies his rustic name of *scythe—whet.* I protect my game as jealously as an English squire. If anybody had oologized a certain cuckoo's nest I know of (I have a pair in my garden every year), it would have left me a sore place in my mind for weeks. I love to bring these aborigines back to the mansuetude they showed to the early voyagers, and before (forgive the involuntary pun) they had grown accustomed to man and knew his savage ways. And they repay your kindness with a sweet familiarity too delicate ever to breed contempt. I have made a Penn—treaty with them, preferring that to the Puritan way with the natives, which converted them to a little Hebraism and a great deal of Medford rum. If they will not come near enough to me (as most of them will), I bring them close with an opera—glass,—a much better weapon than a gun. I would not, if i could, convert them from their pretty pagan ways. The only one I sometimes have savage doubts about is the red squirrel. I *think* he oologizes. I *know* he eats cherries (we counted five of them at one time in a single tree, the stones pattering down like the sparse hail that preludes a storm), and that he gnaws off the small end of pears to get at the seeds. He steals the corn from under the noses of my poultry. But what would you have? He will come down upon the limb of the tree I am lying under till he is within a yard of me. He and his mate will scurry up and down the great black—walnut for my diversion, chattering like monkeys. Can I sign his death—warrant who has tolerated me about his grounds so long? Not I. Let them steal, and welcome. I am sure I should, had I had the same bringing up and the same temptation. As for the birds, I do not believe there is one of them but does more good than harm; and of how many featherless bipeds can this be said?
