

Project Gutenberg's A Lady's Visit to the Gold Diggings of Australia in 1852-3
by Mrs Charles (Ellen) Clacy

Copyright laws are changing all over the world, be sure to check
the laws for your country before redistributing these files!!!

Please take a look at the important information in this header.
We encourage you to keep this file on your own disk, keeping an
electronic path open for the next readers.

Please do not remove this.

This should be the first thing seen when anyone opens the book.
Do not change or edit it without written permission. The words
are carefully chosen to provide users with the information they
need about what they can legally do with the texts.

Welcome To The World of Free Plain Vanilla Electronic Texts

Etexts Readable By Both Humans and By Computers, Since 1971

*****These Etexts Are Prepared By Thousands of Volunteers!*****

Information on contacting Project Gutenberg to get Etexts, and
further information is included below, including for donations.

The Project Gutenberg Literary Archive Foundation is a 501(c)(3)
organization with EIN [Employee Identification Number] 64-6221541

Title: A Lady's Visit to the Gold Diggings of Australia in 1852-53

Author: Mrs Charles (Ellen) Clacy

Release Date: May, 2003 [Etext #4054]
[Yes, we are about one year ahead of schedule]
[The actual date this file first posted = 10/22/01]

Edition: 10

Language: English

Project Gutenberg's A Lady's Visit to the Gold Diggings of Australia in 1852-3
*****This file should be named lvtgd10.txt or lvtgd10.zip*****

Corrected EDITIONS of our etexts get a new NUMBER, lvtgd11.txt
VERSIONS based on separate sources get new LETTER, lvtgd10a.txt

This etext was produced by Col Choat.

Project Gutenberg Etexts are usually created from multiple editions,

all of which are in the Public Domain in the United States, unless a copyright notice is included. Therefore, we usually do NOT keep any of these books in compliance with any particular paper edition.

We are now trying to release all our books one year in advance of the official release dates, leaving time for better editing. Please be encouraged to send us error messages even years after the official publication date.

Please note neither this listing nor its contents are final til midnight of the last day of the month of any such announcement. The official release date of all Project Gutenberg Etexts is at Midnight, Central Time, of the last day of the stated month. A preliminary version may often be posted for suggestion, comment and editing by those who wish to do so.

Most people start at our sites at:

<http://gutenberg.net>

<http://promo.net/pg>

Those of you who want to download any Etext before announcement can surf to them as follows, and just download by date; this is also a good way to get them instantly upon announcement, as the indexes our cataloguers produce obviously take a while after an announcement goes out in the Project Gutenberg Newsletter.

<http://www.ibiblio.org/gutenberg/etext03>

or

<ftp://ftp.ibiblio.org/pub/docs/books/gutenberg/etext03>

Or /etext02, 01, 00, 99, 98, 97, 96, 95, 94, 93, 92, 91 or 90

Just search by the first five letters of the filename you want, as it appears in our Newsletters.

Information about Project Gutenberg (one page)

We produce about two million dollars for each hour we work. The time it takes us, a rather conservative estimate, is fifty hours to get any etext selected, entered, proofread, edited, copyright searched and analyzed, the copyright letters written, etc. This projected audience is one hundred million readers. If our value per text is nominally estimated at one dollar then we produce \$2 million dollars per hour this year as we release fifty new Etext files per month, or 500 more Etexts in 2000 for a total of 3000+. If they reach just 1-2% of the world's population then the total should reach over 300 billion Etexts given away by year's end.

The Goal of Project Gutenberg is to Give Away One Trillion Etext Files by December 31, 2001. [10,000 x 100,000,000 = 1 Trillion] This is ten thousand titles each to one hundred million readers,

which is only about 4% of the present number of computer users.

At our revised rates of production, we will reach only one-third of that goal by the end of 2001, or about 4,000 Etexts unless we manage to get some real funding.

The Project Gutenberg Literary Archive Foundation has been created to secure a future for Project Gutenberg into the next millennium.

We need your donations more than ever!

As of July 12, 2001 contributions are only being solicited from people in: Arkansas, Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Iowa, Kansas, Louisiana, Maine, Massachusetts, Minnesota, Missouri, Montana, Nebraska, New Mexico, Nevada, New Jersey, New York, North Carolina, Ohio, Oklahoma, Oregon, Rhode Island, South Carolina*, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, and Wyoming.

*In Progress

We have filed in about 45 states now, but these are the only ones that have responded.

As the requirements for other states are met, additions to this list will be made and fund raising will begin in the additional states. Please feel free to ask to check the status of your state.

In answer to various questions we have received on this:

We are constantly working on finishing the paperwork to legally request donations in all 50 states. If your state is not listed and you would like to know if we have added it since the list you have, just ask.

While we cannot solicit donations from people in states where we are not yet registered, we know of no prohibition against accepting donations from donors in these states who approach us with an offer to donate.

International donations are accepted, but we don't know ANYTHING about how to make them tax-deductible, or even if they CAN be made deductible, and don't have the staff to handle it even if there are ways.

All donations should be made to:

Project Gutenberg Literary Archive Foundation

PMB 113
1739 University Ave.
Oxford, MS 38655-4109

The Project Gutenberg Literary Archive Foundation is a 501(c)(3) organization with EIN [Employee Identification Number] 64-6221541, and has been approved as a 501(c)(3) organization by the US Internal Revenue Service (IRS). Donations are tax-deductible to the maximum extent permitted by law. As the requirements for other states are met, additions to this list will be made and fund raising will begin in the additional states.

We need your donations more than ever!

You can get up to date donation information at:

<http://www.gutenberg.net/donation.html>

If you can't reach Project Gutenberg,
you can always email directly to:

Michael S. Hart <hart@pobox.com>

hart@pobox.com forwards to hart@prairienet.org and archive.org
if your mail bounces from archive.org, I will still see it, if
it bounces from prairienet.org, better resend later on. . . .

Prof. Hart will answer or forward your message.

We would prefer to send you information by email.

Example command-line FTP session:

```
ftp ftp.ibiblio.org
login: anonymous
password: your@login
cd pub/docs/books/gutenberg
cd etext90 through etext99 or etext00 through etext02, etc.
dir [to see files]
get or mget [to get files. . .set bin for zip files]
GET GUTINDEX.?? [to get a year's listing of books, e.g., GUTINDEX.99]
GET GUTINDEX.ALL [to get a listing of ALL books]
```

The Legal Small Print

(Three Pages)

START**THE SMALL PRINT!**FOR PUBLIC DOMAIN ETEXTS**START

Why is this "Small Print!" statement here? You know: lawyers. They tell us you might sue us if there is something wrong with your copy of this etext, even if you got it for free from someone other than us, and even if what's wrong is not our fault. So, among other things, this "Small Print!" statement disclaims most of our liability to you. It also tells you how you may distribute copies of this etext if you want to.

***BEFORE!* YOU USE OR READ THIS ETEXT**

By using or reading any part of this PROJECT GUTENBERG-tm etext, you indicate that you understand, agree to and accept this "Small Print!" statement. If you do not, you can receive a refund of the money (if any) you paid for this etext by sending a request within 30 days of receiving it to the person you got it from. If you received this etext on a physical medium (such as a disk), you must return it with your request.

ABOUT PROJECT GUTENBERG-TM ETEXTS

This PROJECT GUTENBERG-tm etext, like most PROJECT GUTENBERG-tm etexts, is a "public domain" work distributed by Professor Michael S. Hart through the Project Gutenberg Association (the "Project"). Among other things, this means that no one owns a United States copyright on or for this work, so the Project (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth below, apply if you wish to copy and distribute this etext under the "PROJECT GUTENBERG" trademark.

Please do not use the "PROJECT GUTENBERG" trademark to market any commercial products without permission.

To create these etexts, the Project expends considerable efforts to identify, transcribe and proofread public domain works. Despite these efforts, the Project's etexts and any medium they may be on may contain "Defects". Among other things, Defects may take the form of incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other etext medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

LIMITED WARRANTY; DISCLAIMER OF DAMAGES

But for the "Right of Replacement or Refund" described below, [1] Michael Hart and the Foundation (and any other party you may receive this etext from as a PROJECT GUTENBERG-tm etext) disclaims all liability to you for damages, costs and expenses, including legal fees, and [2] YOU HAVE NO REMEDIES FOR NEGLIGENCE OR UNDER STRICT LIABILITY, OR FOR BREACH OF WARRANTY OR CONTRACT,

INCLUDING BUT NOT LIMITED TO INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES, EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

If you discover a Defect in this etext within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending an explanatory note within that time to the person you received it from. If you received it on a physical medium, you must return it with your note, and such person may choose to alternatively give you a replacement copy. If you received it electronically, such person may choose to alternatively give you a second opportunity to receive it electronically.

THIS ETEXT IS OTHERWISE PROVIDED TO YOU "AS-IS". NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, ARE MADE TO YOU AS TO THE ETEXT OR ANY MEDIUM IT MAY BE ON, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Some states do not allow disclaimers of implied warranties or the exclusion or limitation of consequential damages, so the above disclaimers and exclusions may not apply to you, and you may have other legal rights.

INDEMNITY

You will indemnify and hold Michael Hart, the Foundation, and its trustees and agents, and any volunteers associated with the production and distribution of Project Gutenberg-tm texts harmless, from all liability, cost and expense, including legal fees, that arise directly or indirectly from any of the following that you do or cause: [1] distribution of this etext, [2] alteration, modification, or addition to the etext, or [3] any Defect.

DISTRIBUTION UNDER "PROJECT GUTENBERG-tm"

You may distribute copies of this etext electronically, or by disk, book or any other medium if you either delete this "Small Print!" and all other references to Project Gutenberg, or:

[1] Only give exact copies of it. Among other things, this requires that you do not remove, alter or modify the etext or this "small print!" statement. You may however, if you wish, distribute this etext in machine readable binary, compressed, mark-up, or proprietary form, including any form resulting from conversion by word processing or hypertext software, but only so long as *EITHER*:

[*] The etext, when displayed, is clearly readable, and does *not* contain characters other than those intended by the author of the work, although tilde

(~), asterisk (*) and underline () characters may be used to convey punctuation intended by the author, and additional characters may be used to indicate hypertext links; OR

[*] The etext may be readily converted by the reader at no expense into plain ASCII, EBCDIC or equivalent form by the program that displays the etext (as is the case, for instance, with most word processors); OR

[*] You provide, or agree to also provide on request at no additional cost, fee or expense, a copy of the etext in its original plain ASCII form (or in EBCDIC or other equivalent proprietary form).

[2] Honor the etext refund and replacement provisions of this "Small Print!" statement.

[3] Pay a trademark license fee to the Foundation of 20% of the gross profits you derive calculated using the method you already use to calculate your applicable taxes. If you don't derive profits, no royalty is due. Royalties are payable to "Project Gutenberg Literary Archive Foundation" the 60 days following each date you prepare (or were legally required to prepare) your annual (or equivalent periodic) tax return. Please contact us beforehand to let us know your plans and to work out the details.

WHAT IF YOU *WANT* TO SEND MONEY EVEN IF YOU DON'T HAVE TO?

Project Gutenberg is dedicated to increasing the number of public domain and licensed works that can be freely distributed in machine readable form.

The Project gratefully accepts contributions of money, time, public domain materials, or royalty free copyright licenses.

Money should be paid to the:

"Project Gutenberg Literary Archive Foundation."

If you are interested in contributing scanning equipment or software or other items, please contact Michael Hart at: hart@pobox.com

[Portions of this header are copyright (C) 2001 by Michael S. Hart and may be reprinted only when these Etexts are free of all fees.]

[Project Gutenberg is a TradeMark and may not be used in any sales of Project Gutenberg Etexts or other materials be they hardware or software or any other related product without express permission.]

Chapter I.

INTRODUCTORY REMARKS

It may be deemed presumptuous that one of my age and sex should venture to give to the public an account of personal adventures in a land which has so often been descanted upon by other and abler pens; but when I

reflect on the many mothers, wives, and sisters in England, whose hearts are ever longing for information respecting the dangers and privations to which their relatives at the antipodes are exposed, I cannot but hope that the presumption of my undertaking may be pardoned in consideration of the pleasure which an accurate description of some of the Australian Gold Fields may perhaps afford to many; and although the time of my residence in the colonies was short, I had the advantage (not only in Melbourne, but whilst in the bush) of constant intercourse with many experienced diggers and old colonists--thus having every facility for acquiring information respecting Victoria and the other colonies.

It was in the beginning of April, 185-, that the excitement occasioned by the published accounts of the Victoria "Diggings," induced my brother to fling aside his Homer and Euclid for the various "Guides" printed for the benefit of the intending gold-seeker, or to ponder over the shipping columns of the daily papers. The love of adventure must be contagious, for three weeks after (so rapid were our preparations) found myself accompanying him to those auriferous regions. The following pages will give an accurate detail of my adventures there--in a lack of the marvellous will consist their principal faults but not even to please would I venture to turn uninteresting truth into agreeable fiction. Of the few statistics which occur, I may safely say, as of the more personal portions, that they are strictly true.

Chapter II.

THE VOYAGE OUT

Everything was ready--boxes packed, tinned, and corded; farewells taken, and ourselves whirling down by rail to Gravesend--too much excited--too full of the future to experience that sickening of the heart, that desolation of the feelings, which usually accompanies an expatriation, however voluntary, from the dearly loved shores of one's native land. Although in the cloudy month of April, the sun shone brightly on the masts of our bonny bark, which lay in full sight of the windows of the "Old Falcon," where we had taken up our temporary quarters. The sea was very rough, but as we were anxious to get on board without farther delay, we entrusted our valuable lives in a four-oared boat, despite the dismal prognostications of our worthy host. A pleasant row that was, at one moment covered over with salt-water--the next riding on the top of a wave, ten times the size of our frail conveyance--then came a sudden concussion--in veering our rudder smashed into a smaller boat, which immediately filled and sank, and our rowers disheartened at this mishap would go no farther. The return was still rougher--my face smarted dreadfully from the

cutting splashes of the salt-water; they contrived, however, to land us safely at the "Old Falcon," though in a most pitiable plight; charging only a sovereign for this delightful trip--very moderate, considering the number of salt-water baths they had given us gratis. In the evening a second trial proved more successful, and we reached our vessel safely.

A first night on board ship has in it something very strange, and the first awakening in the morning is still more so. To find oneself in a space of some six feet by eight, instead of a good-sized room, and lying in a cot, scarce wide enough to turn round in, as a substitute for a four-post bedstead, reminds you in no very agreeable manner that you have exchanged the comforts of Old England for the "roughing it" of a sea life. The first sound that awoke me was the "cheerily" song of the sailors, as the anchor was heaved--not again, we trusted, to be lowered till our eyes should rest on the waters of Port Philip. And then the cry of "raise tacks and sheets" (which I, in nautical ignorance, interpreted "hay-stacks and sheep") sent many a sluggard from their berths to bid a last farewell to the banks of the Thames.

In the afternoon we parted company with our steam-tug, and next morning, whilst off the Isle of Wight, our pilot also took his departure. Sea-sickness now became the fashion, but, as I cannot speak from experience of its sensations, I shall altogether decline the subject. On Friday, the 30th, we sighted Stark Point; and as the last speck of English land faded away in the distance, an intense feeling of misery crept over me, as I reflected that perchance I had left those most dear to return to them no more. But I forget; a description of private feelings is, to uninterested readers, only so much twaddle, besides being more egotistical than even an account of personal adventures could extenuate; so, with the exception of a few extracts from my "log," I shall jump at once from the English Channel to the more exciting shores of Victoria.

WEDNESDAY, MAY 5, lat. 45 degrees 57 minutes N., long. 11 degrees 45 minutes W.--Whilst off the Bay of Biscay, for the first time I had the pleasure of seeing the phosphoric light in the water, and the effect was indeed too beautiful to describe. I gazed again and again, and, as the darkness above became more dense, the silence of evening more profound, and the moving lights beneath more brilliant, I could have believed them the eyes of the Undines, who had quitted their cool grottos beneath the sea to gaze on the daring ones who were sailing above them. At times one of these stars of the ocean would seem to linger around our vessel, as though loth to leave the admiring eyes that watched its glittering progress.* * * * *

SUNDAY, 9, lat. 37 degrees 53 minutes N., long. 15 degrees 32 minutes W.--Great excitement throughout the ship. Early in the morning a homeward-bound sail hove in sight, and as the sea was very calm, our captain kindly promised to lower a boat and send letters by her. What a scene then commenced; nothing but scribes and writing-desks met the view, and nought was heard but the scratching of pens, and energetic demands for

foreign letter-paper, vestas, or sealing-wax; then came a rush on deck, to witness the important packet delivered to the care of the first mate, and watch the progress of the little bark that was to bear among so many homes the glad tidings of our safety. On she came--her stunsails set--her white sails glittering in the sun--skimming like a sea-bird over the waters. She proved to be the Maltese schooner 'Felix,' bound for Bremen. Her captain treated the visitors from our ship with the greatest politeness, promised to consign our letters to the first pilot he should encounter off the English coast, and sent his very last oranges as a present to the ladies, for which we sincerely thanked him; the increasing heat of the weather made them acceptable indeed.

WEDNESDAY, 12, lat. 33 degrees 19 minutes N., long. 17 degrees 30 minutes W.--At about noon we sighted Madeira. At first it appeared little more than a dark cloud above the horizon; gradually the sides of the rocks became clearly discernible, then the wind bore us onward, and soon all traces of the sunny isle were gone.

FRIDAY, 28, lat. 4 degrees 2 minutes N., long. 21 degrees 30 minutes W.--Another opportunity of sending letters, but as this was the second time of so doing, the excitement was proportionately diminished. This vessel was bound for the port of Liverpool, from the coast of Africa; her cargo (so said those of our fellow-travellers who boarded her), consisted of ebony and gold-dust, her only passengers being monkeys and parrots.

SUNDAY, JUNE 6, long. 24 degrees 38 minutes W.--Crossed the Line, to the great satisfaction of all on board, as we had been becalmed more than a week, and were weary of gazing upon the unruffled waters around us, or watching the sails as they idly flapped to and fro. Chess, backgammon, books and cards, had ceased to beguile the hours away, and the only amusement left was lowering a boat and rowing about within a short distance of the ship, but this (even by those not pulling at the oars) was considered too fatiguing work, for a tropical sun was above us, and the heat was most intense. Our only resource was to give ourselves up to a sort of DOLCE FAR NIENTE existence, and lounge upon the deck, sipping lemonade or lime-juice, beneath a large awning which extended from the fore to the mizen masts.

TUESDAY, AUGUST 17, lat. 39 degrees 28 minutes S., long. 136 degrees 31 minutes E.--Early this morning one of the sailors died, and before noon the last services of the Church of England were read over his body; this was the first and only death that occurred during our long passage, and the solemnity of committing his last remains to their watery grave cast a saddening influence over the most thoughtless. I shall never forget the moment when the sewn-up hammock, with a gaily coloured flag wrapped round it, was launched into the deep; those who can witness with indifference a funeral on land, would, I think, find it impossible to resist the thrilling awe inspired by such an event at sea.

FRIDAY, 20, lat. 38 degrees 57 minutes S., long. 140 degrees 5 minutes E.--Sighted Moonlight Head, the next day Cape Otway; and in the afternoon of Sunday, the 22nd, we entered the Heads, and our pilot came on board. He was a smart, active fellow, and immediately anchored us within the bay

(a heavy gale brewing); and then, after having done colonial justice to a substantial dinner, he edified us with the last Melbourne news. "Not a spare room or bed to be had--no living at all under a pound a-day--every one with ten fingers making ten to twenty pounds a-week." "Then of course no one goes to the diggings?" "Oh, that pays better still--the gold obliged to be quarried--a pound weight of no value." The excitement that evening can scarcely be imagined, but it somewhat abated next morning on his telling us to diminish his accounts some 200 per cent.

MONDAY, 23.--The wind high, and blowing right against us. Compelled to remain at anchor, only too thankful to be in such safe quarters.

TUESDAY, 24.--Got under weigh at half-past seven in the morning, and passed the wrecks of two vessels, whose captains had attempted to come in without a pilot, rather than wait for one--the increased number of vessels arriving, causing the pilots to be frequently all engaged. The bay, which is truly splendid, was crowded with shipping. In a few hours our anchor was lowered for the last time--boats were put off towards our ship from Liardet's Beach--we were lowered into the first that came alongside--a twenty minutes' pull to the landing-place--another minute, and we trod the golden shores of Victoria.

Chapter III.

STAY IN MELBOURNE

At last we are in Australia. Our feet feel strange as they tread upon TERRA FIRMA, and our SEA-LEGS (to use a sailor's phrase) are not so ready to leave us after a four months' service, as we should have anticipated; but it matters little, for we are in the colonies, walking with undignified, awkward gait, not on a fashionable promenade, but upon a little wooden pier.

The first sounds that greet our ears are the noisy tones of some watermen, who are loitering on the building of wooden logs and boards, which we, as do the good people of Victoria, dignify with the undeserved title of PIER. There they stand in their waterproof caps and skins--tolerably idle and exceedingly independent--with one eye on the look out for a fare, and the other cast longingly towards the open doors of Liardet's public-house, which is built a few yards from the landing-place, and alongside the main road to Melbourne.

"Ah, skipper! times isn't as they used to was," shouted one, addressing the captain of one of the vessels then lying in the bay, who was rowing himself to shore, with no other assistant or companion than a sailor-boy. The captain, a well-built, fine-looking specimen of an

English seaman, merely laughed at this impromptu salutation.

"I say, skipper, I don't quite like that d----d stroke of yours."

No answer; but, as if completely deaf to these remarks, as well as the insulting tone in which they were delivered, the "skipper" continued giving his orders to his boy, and then leisurely ascended the steps. He walked straight up to the waterman, who was lounging against the railing.

"So, my fine fellow, you didn't quite admire that stroke of mine. Now, I've another stroke that I think you'll admire still less," and with one blow he sent him reeling against the railing on the opposite side.

The waterman slowly recovered his equilibrium, muttering, "that was a safe dodge, as the gentleman knew he was the heaviest man of the two."

"Then never let your tongue say what your fist can't defend," was the cool retort, as another blow sent him staggering to his original place, amidst the unrestrained laughter of his companions, whilst the captain unconcernedly walked into Liardet's, whither we also betook ourselves, not a little surprised and amused by this our first introduction to colonial customs and manners.

The fact is, the watermen regard the masters of the ships in the bay as sworn enemies to their business; many are runaway sailors, and therefore, I suppose, have a natural antipathy that way; added to which, besides being no customers themselves, the "skippers," by the loan of their boats, often save their friends from the exorbitant charges these watermen levy.

Exorbitant they truly are. Not a boat would they put off for the nearest ship in the bay for less than a pound, and before I quitted those regions, two and three times that sum was often demanded for only one passenger. We had just paid at the rate of only three shillings and sixpence each, but this trifling charge was in consideration of the large party--more than a dozen--who had left our ship in the same boat together.

Meanwhile we have entered Liardet's EN ATTENDANT the Melbourne omnibus, some of our number, too impatient to wait longer, had already started on foot. We were shown into a clean, well-furnished sitting-room, with mahogany dining-table and chairs, and a showy glass over the mantelpiece. An English-looking barmaid entered. "Would the company like some wine or spirits?" Some one ordered sherry, of which I only remember that it was vile trash at eight shillings a bottle.

And now the cry of "Here's the bus," brought us quickly outside again, where we found several new arrivals also waiting for it. I had hoped, from the name, or rather misname, of the conveyance, to gladden my eyes with the sight of something civilized. Alas, for my disappointment! There stood a long, tumble-to-pieces-looking waggon, not covered

in, with a plank down each side to sit upon, and a miserable narrow plank it was. Into this vehicle were crammed a dozen people and an innumerable host of portmanteaus, large and small, carpet-bags, baskets, brown-paper parcels, bird-cage and inmate, &c., all of which, as is generally the case, were packed in a manner the most calculated to contribute the largest amount of inconvenience to the live portion of the cargo. And to drag this grand affair into Melbourne were harnessed thereto the most wretched-looking objects in the shape of horses that I had ever beheld.

A slight roll tells us we are off.

"And is THIS the beautiful scenery of Australia?" was my first melancholy reflection. Mud and swamp--swamp and mud--relieved here and there by some few trees which looked as starved and miserable as ourselves. The cattle we passed appeared in a wretched condition, and the human beings on the road seemed all to belong to one family, so truly Vandemonian was the cast of their countenances.

"The rainy season's not over," observed the driver, in an apologetic tone. Our eyes and uneasy limbs most FEELINGLY corroborated his statement, for as we moved along at a foot-pace, the rolling of the omnibus, owing to the deep ruts and heavy soil, brought us into most unpleasant contact with the various packages before-mentioned. On we went towards Melbourne--now stopping for the unhappy horses to take breath--then passing our pedestrian messmates, and now arriving at a small specimen of a swamp; and whilst they (with trowsers tucked high above the knee and boots well saturated) step, slide and tumble manfully through it, we give a fearful roll to the left, ditto, ditto to the right, then a regular stand-still, or perhaps, by way of variety, are all but jolted over the animals' heads, till at length all minor considerations of bumps and bruises are merged in the anxiety to escape without broken bones.

"The Yarra," said the conductor. I looked straight ahead, and innocently asked "Where?" for I could only discover a tract of marsh or swamp, which I fancy must have resembled the fens of Lincolnshire, as they were some years ago, before draining was introduced into that county. Over Princes Bridge we now passed, up Swanston Street, then into Great Bourke Street, and now we stand opposite the Post-office--the appointed rendezvous with the walkers, who are there awaiting us. Splashed, wet and tired, and also, I must confess, very cross, right thankful was I to be carried over the dirty road and be safely deposited beneath the wooden portico outside the Post-office. Our ride to Melbourne cost us only half-a-crown a piece, and a shilling for every parcel. The distance we had come was between two and three miles.

The non-arrival of the mail-steamer left us now no other care save the all-important one of procuring food and shelter. Scouts were accordingly despatched to the best hotels; they returned with long faces--"full." The second-rate, and in fact every respectable inn and boarding or lodging-house were tried but with no better success. Here

and there a solitary bed could be obtained, but for our digging party entire, which consisted of my brother, four shipmates, and myself, no accommodation could be procured, and we wished, if possible, to keep together. "It's a case," ejaculated one, casting his eyes to the slight roof above us as if calculating what sort of night shelter it would afford. At this moment the two last searchers approached, their countenances not quite so woe-begone as before. "Well?" exclaimed we all in chorus, as we surrounded them, too impatient to interrogate at greater length. Thank Heavens! they had been successful! The house-keeper of a surgeon, who with his wife had just gone up to Forest Creek, would receive us to board and lodge for thirty shillings a week each; but as the accommodation was of the indifferent order, it was not as yet UNE AFFAIRE ARRANGÉE. On farther inquiry, we found the indifferent accommodation consisted in their being but one small sleeping-room for the gentlemen, and myself to share the bed and apartment of the temporary mistress. This was vastly superior to gipsying in the dirty streets, so we lost no time in securing our new berths, and ere very long, with appetites undiminished by these petty anxieties, we did ample justice to the dinner which our really kind hostess quickly placed before us.

The first night on shore after so long a voyage could scarcely seem otherwise than strange, one missed the eternal rocking at which so many grumble on board ship. Dogs (Melbourne is full of them) kept up an incessant barking; revolvers were cracking in all directions until daybreak, giving one a pleasant idea of the state of society; and last, not least, of these annoyances was one unmentionable to ears polite, which would alone have sufficed to drive sleep away from poor wearied me. How I envied my companion, as accustomed to these disagreeables, she slept soundly by my side; but morning at length dawned, and I fell into a refreshing slumber.

The next few days were busy ones for all, though rather dismal to me, as I was confined almost entirely within doors, owing to the awful state of the streets; for in the colonies, at this season of the year, one may go out prepared for fine weather, with blue sky above, and dry under foot, and in less than an hour, should a COLONIAL shower come on, be unable to cross some of the streets without a plank being placed from the middle of the road to the pathway, or the alternative of walking in water up to the knees.

This may seem a doleful and overdrawn picture of my first colonial experience, but we had arrived at a time when the colony presented its worst aspect to a stranger. The rainy season had been unusually protracted this year, in fact it was not yet considered entirely over, and the gold mines had completely upset everything and everybody, and put a stop to all improvements about the town or elsewhere.

Our party, on returning to the ship the day after our arrival, witnessed the French-leave-taking of all her crew, who during the absence of the captain, jumped overboard, and were quickly picked up and landed by the various boats about. This desertion of the ships by

the sailors is an every-day occurrence; the diggings themselves, or the large amount they could obtain for the run home from another master, offer too many temptations. Consequently, our passengers had the amusement of hauling up from the hold their different goods and chattels; and so great was the confusion, that fully a week elapsed before they were all got to shore. Meanwhile we were getting initiated into colonial prices--money did indeed take to itself wings and fly away. Fire-arms were at a premium; one instance will suffice--my brother sold a six-barrelled revolver for which he had given sixty shillings at Baker's, in Fleet Street, for sixteen pounds, and the parting with it at that price was looked upon as a great favour. Imagine boots, and they very second-rate ones, at four pounds a pair. One of our between-deck passengers who had speculated with a small capital of forty pounds in boots and cutlery, told me afterwards that he had disposed of them the same evening he had landed, at a net profit of ninety pounds--no trifling addition to a poor man's purse. Labour was at a very high price, carpenters, boot and shoemakers, tailors, wheelwrights, joiners, smiths, glaziers, and, in fact, all useful trades, were earning from twenty to thirty shillings a day--the very men working on the roads could get eleven shillings PER DIEM, and, many a gentleman in this disarranged state of affairs, was glad to fling old habits aside and turn his hand to whatever came readiest. I knew one in particular, whose brother is at this moment serving as colonel in the army in India, a man more fitted for a gay London life than a residence in the colonies. The diggings were too dirty and uncivilized for his taste, his capital was quickly dwindling away beneath the expenses of the comfortable life he led at one of the best hotels in town, so he turned to what as a boy he had learnt for amusement, and obtained an addition to his income of more than four hundred pounds a year as house carpenter. In the morning you might see him trudging off to his work, and before night might meet him at some ball or soiree among the elite of Melbourne.

I shall not attempt an elaborate description of the town of Melbourne, or its neighbouring villages. A subject so often and well discussed might almost be omitted altogether. The town is very well laid out; the streets (which are all straight, running parallel with and across one another) are very wide, but are incomplete, not lighted, and many are unpaved. Owing to the want of lamps, few, except when full moon, dare stir out after dark. Some of the shops are very fair; but the goods all partake too largely of the flash order, for the purpose of suiting the tastes of successful diggers, their wives and families; it is ludicrous to see them in the shops--men who, before the gold-mines were discovered, toiled hard for their daily bread, taking off half-a-dozen thick gold rings from their fingers, and trying to pull on to their rough, well-hardened hands the best white kids, to be worn at some wedding party; whilst the wife, proud of the novel ornament, descants on the folly of hiding them beneath such useless articles as gloves.

The two principal streets are Collins Street and Elizabeth Street. The former runs east and west, the latter crossing it in the centre. Melbourne is built on two hills, and the view from the top of Collins

Street East, is very striking on a fine day when well filled with passengers and vehicles. Down the eye passes till it reaches Elizabeth Street at the foot; then up again, and the moving mass seems like so many tiny black specks in the distance, and the country beyond looks but a little piece of green. A great deal of confusion arises from the want of their names being painted on the corners of the streets: to a stranger, this is particularly inconvenient, the more so, as being straight, they appear all alike on first acquaintance. The confusion is also increased by the same title, with slight variation, being applied to so many, as, for instance, Collins Street East; Collins Street West; Little Collins Street East; Little Collins Street West, &c. &c. Churches and chapels for all sects and denominations meet the eye; but the Established Church has, of all, the worst provision for its members, only two small churches being as yet completed; and Sunday after Sunday do numbers return from St. Peter's, unable to obtain even standing room beneath the porch. For the gay, there are two circuses and one theatre, where the "ladies" who frequent it smoke short tobacco-pipes in the boxes and dress-circle.

The country round is very pretty, particularly Richmond and Collingwood; the latter will, I expect, soon become part of Melbourne itself. It is situated at the fashionable--that is, EAST--end of Melbourne, and the buildings of the city and this suburban village are making rapid strides towards each other. Of Richmond, I may remark that it does possess a "Star and Garter," though a very different affair to its namesake at the antipodes, being only a small public-house. On the shores of the bay, at nice driving distances, are Brighton and St. Kilda. Two or three fall-to-pieces bathing-machines are at present the only stock in trade of these watering-places; still, should some would-be fashionables among my readers desire to emigrate, it may gratify them to learn that they need not forego the pleasure of visiting Brighton in the season.

When I first arrived, as the weather was still very cold and wet, my greatest source of discomfort arose from the want of coal-fires, and the draughts, which are innumerable, owing to the slight manner in which the houses are run up; in some the front entrance opens direct into the sitting-rooms, very unpleasant, and entirely precluding the "not at home" to an unwelcome visitor. Wood fires have at best but a cheerless look, and I often longed for the bright blaze and merry fireside of an English home. Firewood is sold at the rate of fifty shillings for a good-sized barrow-full.

The colonists (I here speak of the old-established ones) are naturally very hospitable, and disposed to receive strangers with great kindness; but the present ferment has made them forget everything in the glitter of their own mines, and all comfort is laid aside; money is the idol, and making it is the one mania which absorbs every other thought.

The walking inhabitants are of themselves a study: glance into the streets--all nations, classes, and costumes are represented there. Chinamen, with pigtails and loose trowsers; Aborigines, with a solitary blanket flung over them; Vandemonian pickpockets, with cunning eyes and

light fingers--all, in truth, from the successful digger in his blue serge shirt, and with green veil still hanging round his wide-awake, to the fashionably-attired, newly-arrived "gent" from London, who stares around him in amazement and disgust. You may see, and hear too, some thoroughly colonial scenes in the streets. Once, in the middle of the day, when passing up Elizabeth Street, I heard the unmistakeable sound of a mob behind, and as it was gaining upon me, I turned into the enclosed ground in front of the Roman Catholic cathedral, to keep out of the way of the crowd. A man had been taken up for horse-stealing and a rare ruffianly set of both sexes were following the prisoner and the two policemen who had him in charge. "If but six of ye were of my mind," shouted one, "it's this moment you'd release him." The crowd took the hint, and to it they set with right good will, yelling, swearing, and pushing, with awful violence. The owner of the stolen horse got up a counter demonstration, and every few yards, the procession was delayed by a trial of strength between the two parties. Ultimately the police conquered; but this is not always the case, and often lives are lost and limbs broken in the struggle, so weak is the force maintained by the colonial government for the preservation of order.

Another day, when passing the Post-office, a regular tropical shower of rain came on rather suddenly, and I hastened up to the platform for shelter. As I stood there, looking out into Great Bourke Street, a man and, I suppose, his wife passed by. He had a letter in his hand for the post; but as the pathway to the receiving-box looked very muddy, he made his companion take it to the box, whilst he himself, from beneath his umbrella, complacently watched her getting wet through. "Colonial politeness," thought I, as the happy couple walked on.

Sometimes a jovial wedding-party comes dashing through the streets; there they go, the bridegroom with one arm round his lady's waist, the other raising a champagne-bottle to his lips; the gay vehicles that follow contain company even more unrestrained, and from them noisier demonstrations of merriment may be heard. These diggers' weddings are all the rage, and bridal veils, white kid gloves, and, above all, orange blossoms are generally most difficult to procure at any price.

At times, you may see men, half-mad, throwing sovereigns, like halfpence, out of their pockets into the streets; and I once saw a digger, who was looking over a large quantity of bank-notes, deliberately tear to pieces and trample in the mud under his feet every soiled or ragged one he came to, swearing all the time at the gold-brokers for "giving him dirty paper money for pure Alexander gold; he wouldn't carry dirt in his pocket; not he; thank God! he'd plenty to tear up and spend too."

Melbourne is very full of Jews; on a Saturday, some of the streets are half closed. There are only two pawnbrokers in the town.

The most thriving trade there, is keeping an hotel or public-house, which always have a lamp before their doors. These at night serve as a

beacon to the stranger to keep as far from them as possible, they being, with few exceptions, the resort, after dark, of the most ruffianly characters.

* * * * *

On the 2nd of September, the long-expected mail steamer arrived, and two days after we procured our letters from the Post-office. I may here remark, that the want of proper management in this department is the greatest cause of inconvenience to fresh arrivals, and to the inhabitants of Melbourne generally. There is but ONE SMALL WINDOW, whence letters directed to lie at the office are given out; and as the ships from England daily discharged their living cargoes into Melbourne, the crowd round this inefficient delivering-place rendered getting one's letters the work, not of hours, but days. Newspapers, particularly pictorial ones, have, it would appear, a remarkable facility for being lost EN ROUTE. Several numbers of the "Illustrated London News" had been sent me, and, although the letters posted with them arrived in safety, the papers themselves never made their appearance. I did hear that, when addressed to an uncolonial name, and with no grander direction than the Post-office itself, the clerks are apt to appropriate them--this is, perhaps, only a wee bit of Melbourne scandal.

The arrival of our letters from England left nothing now to detain us, and made us all anxious to commence our trip to the diggings, although the roads were in an awful condition. Still we would delay no longer, and the bustle of preparation began. Stores of flour, tea, and sugar, tents and canvas, camp-ovens, cooking utensils, tin plates and pannikins, opossum rugs and blankets, drays, carts and horses, cradles, &c. &c., had to be looked at, bought and paid for.

On board ship, my brother had joined himself to a party of four young men, who had decided to give the diggings a trial. Four other of our shipmates had also joined themselves into a digging-party, and when they heard of our intended departure, proposed travelling up together and separating on our arrival. This was settled, and a proposal made that between the two sets they should raise funds to purchase a dray and horses, and make a speculation in flour, tea, &c., on which an immense profit was being made at the diggings. It would also afford the convenience of taking up tents, cradles, and other articles impossible to carry up without. The dray cost one hundred pounds, and the two strong cart-horses ninety and one hundred pounds respectively. This, with the goods themselves, and a few sundries in the shape of harness and cords, made only a venture of about fifty pounds a-piece. While these arrangements were rapidly progressing, a few other parties wished to join ours for safety on the road, which was agreed to, and the day fixed upon for the departure was the 7th of September. Every one, except myself, was to walk, and we furthermore determined to "camp out" as much as possible, and thus avoid the vicinity of the inns and halting-places on the way, which are frequently the lurking-places of thieves and bushrangers.

* * * * *

On the Sunday previous to the day on which our journey was to commence, I had a little adventure, which pleased me at the time, though, but for the sequel, not worth mentioning here. I had walked with my brother and a friend to St. Peter's Church; but we were a few minutes behind time, and therefore could find no unoccupied seat. Thus disappointed, we strolled over Princes Bridge on to the other side of the Yarra. Between the bridge and the beach, on the south side of the river, is a little city of tents, called Little Adelaide. They were inhabited by a number of families, that the rumour of the Victoria gold-mines had induced to leave South Australia, and whose finances were unequal to the high prices in Melbourne.

Government levies a tax of five shillings a week on each tent, built upon land as wild and barren as the bleakest common in England. We did not wander this morning towards Little Adelaide; but followed the Yarra in its winding course inland, in the direction of the Botanical Gardens.

Upon a gentle rise beside the river, not far enough away from Melbourne to be inconvenient, but yet sufficiently removed from its mud and noise, were pitched two tents, evidently new, with crimson paint still gay upon the round nobs of the centre posts, and looking altogether more in trim for a gala day in Merry England than a trip to the diggings. The sun was high above our heads, and the day intensely hot; so much so, that I could not resist the temptation of tapping at the canvas door to ask for a draught of water. A gentleman obeyed the summons, and on learning the occasion of this unceremonious visit, politely accommodated me with a camp-stool and some delicious fresh milk--in Melbourne almost a luxury. Whilst I was imbibing this with no little relish, my friends were entering into conversation with our new acquaintance. The tents belonged to a party just arrived by the steamer from England, with everything complete for the diggings, to which they meant to proceed in another week, and where I had the pleasure of meeting them again, though under different and very peculiar circumstances. The tent which I had invaded was inhabited by two, the elder of whom, a powerfully-built man of thirty, formed a strong contrast to his companion, a delicate-looking youth, whose apparent age could not have exceeded sixteen years.

After a short rest, we returned to Melbourne, well pleased with our little adventure.

The next day was hardly long enough for our numerous preparations, and it was late before we retired to rest. Six was the hour appointed for the next morning's breakfast. Excited with anticipating the adventures to commence on the morrow, no wonder that my dreams should all be GOLDEN ones.

Chapter IV.

CAMPING UP--MELBOURNE TO THE BLACK FOREST

The anxiously-expected morning at length commenced, and a dismal-looking morning it was--hazy and damp, with a small drizzling rain, which, from the gloomy aspect above, seemed likely to last. It was not, however, sufficient to damp our spirits, and the appointed hour found us all assembled to attack the last meal that we anticipated to make for some time to come beneath the shelter of a ceiling. At eight o'clock our united party was to start from the "Duke of York" hotel, and as that hour drew nigh, the unmistakeable signs of "something up," attracted a few idlers to witness our departure. In truth, we were a goodly party, and created no little sensation among the loungers--but I must regularly introduce our troop to my readers.

First then, I must mention two large drays, each drawn by a pair of stout horses--one the property of two Germans, who were bound for Forest Creek, the other belonged to ourselves and shipmates. There were three pack-horses--one (laden with a speculation in bran) belonged to a queer-looking sailor, who went by the name of Joe, the other two were under the care of a man named Gregory, who was going to rejoin his mates at Eagle Hawk Gully. As his destination was the farthest, and he was well acquainted with the roads, he ought to have been elected leader, but from some mis-management that dignity was conferred upon a stout old gentleman, who had taken a pleasure-trip to Mount Alexander, the previous summer.

Starting is almost always a tedious affair, nor was this particular case an exception. First one had forgotten something--another broke a strap, and a new one had to be procured--then the dray was not properly packed, and must be righted--some one else wanted an extra "nobbler"--then a fresh, and still a fresh delay, so that although eight was the appointed hour, it was noon ere we bade farewell to mine host of the "Duke of York."

At length the word of command was spoken. Foremost came the gallant captain (as we had dubbed him), and with him two ship doctors, in partnership together, who carried the signs of their profession along with them in the shape of a most surgeon-like mahogany box. Then came the two Germans, complacently smoking their meerschaums, and attending to their dray and horses, which latter, unlike their masters, were of a very restless turn of mind. After these came a party of six, among whom was Gregory and two lively Frenchmen, who kept up an incessant chattering. Joe walked by himself, leading his pack-horse, then came our four shipmates, two by two, and last, our own particular five.

Most carried on their backs their individual property--blankets, provisions for the road, &c., rolled in a skin, and fastened over the shoulders by leathern straps. This bundle goes by the name of "swag,"

and is the digger's usual accompaniment--it being too great a luxury to place upon a dray or pack-horse anything not absolutely necessary. This will be easily understood when it is known that carriers, during the winter, obtained 120 pounds and sometimes 150 pounds a ton for conveying goods to Bendigo (about one hundred miles from Melbourne). Nor was the sum exorbitant, as besides the chance of a few weeks' stick in the mud, they run great risk of injuring their horses or bullocks; many a valuable beast has been obliged to be shot where it stood, it being found impossible to extricate it from the mud and swamp. At the time we started, the sum generally demanded was about 70 pounds per ton. On the price of carriage up, depended of course the price of provisions at the diggings.

The weight of one of these "swags" is far from light; the provender for the road is itself by no means trifling, though that of course diminishes by the way, and lightens the load a little. Still there are the blankets, fire-arms, drinking and eating apparatus, clothing, chamois-leather for the gold that has yet to be dug, and numberless other cumbersome articles necessary for the digger. In every belt was stuck either a large knife or a tomahawk; two shouldered their guns (by the bye, rather imprudent, as the sight of fire-arms often brings down an attack); some had thick sticks, fit to fell a bullock; altogether, we seemed well prepared to encounter an entire army of bushrangers. I felt tolerably comfortable perched upon our dray, amid a mass of other soft lumber; a bag of flour formed an easy support to lean against; on either side I was well walled in by the canvas and poles of our tent; a large cheese made a convenient footstool. My attire, although well suited for the business on hand, would hardly have passed muster in any other situation. A dress of common dark blue serge, a felt wide-awake, and a waterproof coat wrapped round me, made a ludicrous assortment.

Going along at a foot-pace we descended Great Bourke Street, and made our first halt opposite the Post-office, where one of our party made a last effort to obtain a letter from his lady-love, which was, alas! unsuccessful. But we move on again--pass the Horse Bazaar--turn into Queen Street--up we go towards Flemington, leaving the Melbourne cemetery on our right, and the flag-staff a little to the left; and now our journey may be considered fairly begun.

Just out of Melbourne, passing to the east of the Benevolent Asylum, we went over a little rise called Mount Pleasant, which, on a damp sort of a day, with the rain beating around one, seemed certainly a misnomer. After about two miles, we came to a branch-road leading to Pentridge, where the Government convict establishment is situated. This we left on our right, and through a line of country thickly wooded (consisting of red and white gum, stringy bark, cherry and other trees), we arrived at Flemington, which is about three miles and a half from town.

Flemington is a neat little village or town-ship, consisting of about forty houses, a blacksmith's shop, several stores, and a good inn, built of brick and stone, with very fair accommodation for travellers, and a large stable and stock-yards.

After leaving Flemington, we passed several nice-looking homesteads; some are on a very large scale, and belong to gentlemen connected with Melbourne, who prefer "living out of town." On reaching the top of the hill beyond Flemington there is a fine view of Melbourne, the bay, William's Town, and the surrounding country, but the miserable weather prevented us at this time from properly enjoying it. Sunshine was all we needed to have made this portion of our travels truly delightful.

The road was nicely level, fine trees sheltered it on either side, whilst ever and anon some rustic farm-house was passed, or coffee-shop, temporarily erected of canvas or blankets, offered refreshment (such as it was), and the latest news of the diggings to those who had no objection to pay well for what they had. This Flemington road (which is considered the most Pleasant in Victoria, or at least anywhere near Melbourne) is very good as far as Tulip Wright's, which we now approached.

Wright's public-house is kept by the man whose name it bears; it is a rambling ill-built, but withal pleasing-looking edifice, built chiefly of weather-board and shingle, with a verandah all round. The whole is painted white, and whilst at some distance from it a passing ray of sunshine gave it a most peculiar effect. In front of the principal entrance is a thundering large lamp, a most conspicuous looking object. Wright himself was formerly in the police, and being a sharp fellow, obtained the cognomen of "Tulip," by which both he and his house have always been known; and so inseparable have the names become, that, whilst "Tulip Wright's" is renowned well-nigh all over the colonies, the simple name of the owner would create some inquiries. The state of accommodation here may be gathered from the success of some of the party who had a PENCHANT for "nobbles" of brandy. "Nothing but bottled beer in the house." "What could we have for dinner?" inquired one, rather amused at this Hobson's choice state of affairs. "The eatables was only cold meat; and they couldn't cook nothink fresh," was the curt reply. "Can we sleep here?" "Yes--under your drays." As we literally determined to "camp out" on the journey, we passed on, without partaking of their "cold eatables," or availing ourselves of their permission to sleep under our own drays, and, leaving the road to Sydney on our right, and the one to Keilor straight before us, we turned short off to the left towards the Deep Creek.

Of the two rejected routes I will give a very brief account.

The right-hand road leads to Sydney, VIA Kilmore, and many going to the diggings prefer using this road as far as that township. The country about here is very flat, stony and destitute of timber; occasionally the journey is varied by a water-hole or surface-spring. After several miles, a public-house called the "Lady of the Lake" is reached, which is reckoned by many the best country inn on this or any other road in the colonies. The accommodation is excellent, and the rooms well arranged, and independent of the house. There are ten or twelve rooms which, on a push, could accommodate fifty or sixty people; six are

arranged in pairs for the convenience of married persons, and the fashionable trip during the honey-moon (particularly for diggers' weddings) is to the "Lady of the Lake." Whether Sir Walter's poem be the origin of the sign, or whether the swamps in the rear, I cannot say, but decidedly there is no lake and no lady, though I have heard of a buxom lass, the landlord's daughter, who acts as barmaid, and is a great favourite. This spot was the scene last May of a horrible murder, which has added no little to the notoriety of the neighbourhood.

After several miles you at length arrive at Kilmore, which is a large and thriving township, containing two places of worship, several stores and inns. There is a resident magistrate with his staff of officials, and a station for a detachment of mounted police. Kilmore is on the main overland road from Melbourne to Sydney, and, although not on the confines of the two colonies, is rather an important place, from being the last main township until you reach the interior of New South Wales. The Government buildings are commodious and well arranged. There are several farms and stations in the neighbourhood, but the country round is flat and swampy.

The middle road leads you direct to Keilor, and you must cross the Deep Creek in a dangerous part, as the banks thereabouts are very steep, the stream (though narrow) very rapid, and the bottom stony. In 1851, the bridge (an ordinary log one) was washed down by the floods, and for two months all communication was cut off. Government have now put a punt, which is worked backwards and forwards every half-hour from six in the morning till six at night, at certain fares, which are doubled after these hours. These fares are: for a passenger, 6d.; a horse or bullock, 1s.; a two-wheeled vehicle, 1s. 6d.; a loaded dray, 2s. The punt is tolerably well managed, except when the man gets intoxicated--not an unfrequent occurrence. When there was neither bridge nor punt, those who wished to cross were obliged to ford it; and so strong has been the current, that horses have been carried down one or two hundred yards before they could effect a landing. Keilor is a pretty little village with a good inn, several nice cottages, and a store or two. The country round is hilly and barren--scarcely any herbage and that little is rank and coarse; the timber is very scarce. This road to the diggings is not much used.

But to return to ourselves. The rain and bad roads made travelling so very wearisome, that before we had proceeded far it was unanimously agreed that we should halt and pitch our first encampment. "Pitch our first encampment! how charming!" exclaims some romantic reader, as though it were an easily accomplished undertaking. Fixing a gipsy-tent at a FETE CHAMPETRE, with a smiling sky above, and all requisites ready to hand, is one thing, and attempting to sink poles and erect tents out of blankets and rugs in a high wind and pelting rain, is (if I may be allowed the colonialism) "a horse of quite another colour." Some sort of sheltering-places were at length completed; the horses were taken from the dray and tethered to some trees within sight, and then we made preparations for satisfying the unromantic cravings of hunger--symptoms of which we all, more or less,

began to feel. With some difficulty a fire was kindled and kept alight in the hollow trunk of an old gum tree. A damper was speedily made, which, with a plentiful supply of steaks and boiled and roasted eggs, was a supper by no means to be despised. The eggs had been procured at four shillings a dozen from a farm-house we had passed.

It was certainly the most curious tea-table at which I had ever assisted. Chairs, of course, there were none, we sat or lounged upon the ground as best suited our tired limbs; tin pannicans (holding about a pint) served as tea-cups, and plates of the same metal in lieu of china; a teapot was dispensed with; but a portly substitute was there in the shape of an immense iron kettle, just taken from the fire and placed in the centre of our grand tea-service, which being new, a lively imagination might mistake for silver. Hot spirits, for those desirous of imbibing them, followed our substantial repast; but fatigue and the dreary weather had so completely damped all disposition to conviviality, that a very short space of time found all fast asleep except the three unfortunates on the watch, which was relieved every two hours.

WEDNESDAY, SEPTEMBER 8.--I awoke rather early this morning, not feeling over-comfortable from having slept in my clothes all night, which it is necessary to do on the journey, so as never to be unprepared for any emergency. A small corner of my brother's tent had been partitioned off for my BED-ROOM; it was quite dark, so my first act on waking was to push aside one of the blankets, still wet, which had been my roof during the night, and thus admit air and light into my apartments. Having made my toilette--after a fashion--I joined my companions on the watch, who were deep in the mysteries of preparing something eatable for breakfast. I discovered that their efforts were concentrated on the formation of a damper, which seemed to give them no little difficulty. A damper is the legitimate, and, in fact, only bread of the bush, and should be made solely of flour and water, well mixed and kneaded into a cake, as large as you like, but not more than two inches in thickness, and then placed among the hot ashes to bake. If well-made, it is very sweet and a good substitute for bread. The rain had, however, spoiled our ashes, the dough would neither rise nor brown, so in despair we mixed a fresh batch of flour and water, and having fried some rashers of fat bacon till they were nearly melted, we poured the batter into the pan and let it fry till done. This impromptu dish gave general satisfaction and was pronounced a cross between a pancake and a heavy suet pudding.

Breakfast over, our temporary residences were pulled down, the drays loaded, and our journey recommenced.

We soon reached the Deep Creek, and crossed by means of a punt, the charges being the same as the one at Keilor. Near here is a station belonging to Mr. Ryleigh, which is a happy specimen of a squatter's home--everything being managed in a superior manner. The house itself is erected on a rise and surrounded by an extensive garden, vinery and orchard, all well stocked and kept; some beautifully enclosed paddocks reach to the Creek, and give an English park-like appearance to the

whole. The view from here over the bay and Brighton is splendid; you can almost distinguish Geelong. About a quarter of a mile off is a little hamlet with a neat Swiss-looking church, built over a school-room on a rise of ground; it has a most peculiar effect, and is the more singular as the economizing the ground could not be a consideration in the colony; on the left of the church is a pretty little parsonage, whitewashed, with slate roof and green-painted window-frames.

I still fancy, though our redoubtable captain most strenuously denied it, that we had in some manner gone out of our way; however that may be, the roads seemed worse and worse as we proceeded, and our pace became more tedious as here and there it was up-hill work till at length we reached the Keilor plains. It was almost disheartening to look upon that vast expanse of flat and dreary land except where the eye lingered on the purple sides of Mount Macedon, which rose far distant in front of us. On entering the plains we passed two or three little farm-houses, coffee-shops, &c., and encountered several parties coming home for a trip to Melbourne. For ten miles we travelled on dismally enough, for it rained a great deal, and we were constantly obliged to halt to get the horses rested a little. We now passed a coffee-shop, which although only consisting of a canvas tent and little wooden shed, has been known to accommodate above forty people of a night. As there are always plenty of bad characters lounging in the neighbourhood of such places, we kept at a respectful distance, and did not make our final halt till full two miles farther on our road. Tents were again pitched, but owing to their not being fastened over securely, many of us got an unwished-for shower-bath during the night; but this is nothing--at the antipodes one soon learns to laugh at such trifles.

THURSDAY, 9.--This morning we were up betimes, some of our party being so sanguine as to anticipate making the "Bush Inn" before evening. As we proceeded, this hope quickly faded away. The Keilor plains seemed almost impassable, and what with pieces of rock here, and a water-hole there, crossing them was more dangerous than agreeable. Now one passed a broken-down dray; then one's ears were horrified at the oaths an unhappy wight was venting at a mud-hole into which he had stumbled. A comical object he looked, as, half-seas-over, he attempted to pull on a mud-covered boot, which he had just extricated from the hole where it and his leg had parted company. A piece of wood, which his imagination transformed into a shoe-horn, was in his hand. "Put it into the larboard side," (suiting the action to the word), "there it goes--damn her, she won't come on! Put it into the starboard side there it goes--well done, old girl," and he triumphantly rose from the ground, and reeled away.

With a hearty laugh, we proceeded on our road, and after passing two or three coffee-tents, we arrived at Gregory's Inn. The landlord is considered the best on the road, and is a practical example of what honesty and industry may achieve. He commenced some nine months before without a shilling--his tarpaulin tent and small stock of tea, sugar, coffee, &c., being a loan. He has now a large weather-board house,

capable of making up one hundred beds, and even then unable to accommodate all his visitors, so numerous are they, from the good name he bears. Here we got a capital cold dinner of meat, bread, cheese, coffee, tea, &c., for three shillings a-piece, and, somewhat refreshed, went forwards in better spirits, though the accounts we heard there of the bad roads in the Black Forest would have disheartened many.

Mount Macedon now formed quite a beautiful object on our right: a little below that mountain appeared a smaller one, called the Bald Hill, from its peak being quite barren, and the soil of a white limestone and quartz nature, which gives it a most peculiar and splendid appearance when the sun's rays are shining upon it. As we advanced, the thickly-wooded sides of Mount Macedon became more distinct, and our proximity to a part of the country which we knew to be auriferous, exercised an unaccountable yet pleasureable influence over our spirits, which was perhaps increased by the loveliness of the spot where we now pitched our tents for the evening. It was at the foot of the Gap. The stately gum-tree, the shea-oak, with its gracefully drooping foliage, the perfumed yellow blossom of the mimosa, the richly-wooded mountain in the background, united to form a picture too magnificent to describe. The ground was carpeted with wild flowers; the sarsaparilla blossoms creeping everywhere; before us slowly rippled a clear streamlet, reflecting a thousand times the deepening tints which the last rays of the setting sun flung over the surrounding scenery; the air rang with the cawing of the numerous cockatoos and parrots of all hues and colours who made the woods resound with their tones, whilst their restless movements and gay plumage gave life and piquancy to the scene.

This night our beds were composed of the mimosa, which has a perfume like the hawthorn. The softest-looking branches were selected, cut down, and flung upon the ground beneath the tents, and formed a bed which, to my wearied limbs, appeared the softest and most luxuriant upon which I had slept since my arrival in the colonies.

FRIDAY, 10.--With some reluctance I aroused myself from a very heavy slumber produced by the over fatigue of the preceding day. I found every one preparing to start; kindly considerate, my companions thought a good sleep more refreshing for me than breakfast, and had deferred awakening me till quite obliged, so taking a few sailors' biscuits in my pocket to munch on the way, I bade farewell to a spot whose natural beauties I have never seen surpassed.

Proceeding onwards, we skirted the Bald Hill, and entering rather a scrubby tract, crossed a creek more awkward for our drays than dangerous to ourselves; we then passed two or three little coffee-shops, which being tents are always shifting their quarters, crossed another plain, very stony and in places swampy, which terminated in a thickly-wooded tract of gum and wattle trees. Into this wood we now entered. After about five miles uncomfortable travelling we reached the "Bush Inn."

I must here observe that no DISTINCT road is ever cut out, but the

whole country is cut up into innumerable tracks by the carts and drays, and which are awfully bewildering to the new-comer as they run here and there, now crossing a swamp, now a rocky place, here a creek, there a hillock, and yet, in many cases, all leading BONA FIDE to the same place.

The "Bush Inn" (the genuine one, for there are two) consists of a large, well-built, brick and weather-board house, with bed-rooms for private families. There is a detached weather-board, and stone kitchen, and tap-room, with sleeping-lofts above, a large yard with sheds and good stabling. A portion of the house and stables is always engaged for the use of the escort. About two hundred yards off is the "New Bush Inn," somewhat similar to the other, not quite so large, with an attempt at a garden. The charges at these houses are enormous. Five and six shillings per meal, seven-and-sixpence for a bottle of ale, and one shilling for half a glass or "nobbler" of brandy. About half a mile distant is a large station belonging to Mr. Watson; the houses, huts and yards are very prettily laid out, and, in a few years he will have the finest vineyard in the neighbourhood. Two miles to the east is the residence of Mr. Poullett, Commissioner of Crown Lands, which is very pleasantly situated on the banks of an ever-running stream. The paddock, which is a large one (10 square miles, or 6400 acres), is well wooded. Some new police barracks and stabling yards are in the course of erection.

We did not linger in the "Bush Inn," but pursued our way over a marshy flat, crossed a dangerous creek, and having ascended a steep and thickly wooded hill on the skirts of the Black Forest, we halted and pitched our tents. It was little more than mid-day, but the road had been fearful--as bad as wading through a mire; men and beasts were worn out, and it was thought advisable to recruit well before entering the dreaded precincts of the Black Forest. Fires were lit, supper was cooked, spirits and pipes made their appearance, songs were sung, and a few of the awful exploits of Black Douglas and his followers were related. Later in the evening, an opossum was shot by one of us. Its skin was very soft, with rich, brown hair.

SATURDAY, 11--A dismal wet day--we remained stationary, as many of our party were still foot-sore, and all were glad of a rest. Some went out shooting, but returned with only a few parrots and cockatoos, which they roasted, and pronounced nice eating. Towards evening, a party of four, returning from the diggings, encamped at a little distance from us. Some of our loiterers made their acquaintance. They had passed the previous night in the Black Forest, having wandered out of their way. To add to their misfortunes, they had been attacked by three well-armed bushrangers, whom they had compelled to desist from their attempt, not, however, before two of the poor men had been wounded, one rather severely. Hardly had they recovered this shock, than they were horrified by the sudden discovery in a sequestered spot of some human bones, strewn upon the ground beside a broken-down cart. Whether accident or design had brought these unfortunates to an untimely end, none know; but this ominous appearance seemed to have terrified them even more than the bushrangers themselves. These accounts sobered

our party not a little, and it was deemed advisable to double the watch that night.

Chapter V.

CAMPING UP--BLACK FOREST TO EAGLE HAWK GULLY

SUNDAY, 12.--A lovely summer morning, which raised our spirits to something like their usual tone, with the exception of our gallant(?) captain, who resigned his post, declaring it his intention to return to Melbourne with the four returning diggers. Poor fellow! their awful account of the Black Forest had been too much for his courage. Gregory was elected in his place, and wishing him a pleasant trip home, our journey was resumed as usual, and we entered the forest. Here the trees grow very closely together; in some places they are so thickly set that the rear-guard of the escort cannot see the advance-guard in the march. There is a slight undergrowth of scrub. We saw some of the choicest of the ERICA tribe in full bloom, like a beautiful crimson waxen bell-blossom, and once whilst walking (which I frequently did to relieve the monotony of being perched on the dray by myself) I saw a fine specimen of the ORELUDIAE at the foot of a tree growing from the wood; it was something like a yellow sweet-pea, but really too beautiful to describe. The barks of the trees, and also the ground, have a black, charred appearance (hence the name of the forest); this is said to have been caused by its having once been on fire. Many of the ambuscades of the noted Douglas were passed, and the scenes of some most fearful murders pointed out. We only halted once--so anxious were we to leave behind us this dreaded spot--and at sunset reached the borders of the Five Mile Creek.

MONDAY, 13.--Another fine day. Crossed the Five Mile Creek by means of a rickety sort of bridge. There are two inns here, with plenty of accommodation for man and beast. We patronized neither, but made the best of our way towards Kyneton. Our road lay through a densely wooded country till we arrived at Jacomb's Station; this we left, and turning to the right, soon reached Kyneton, which lies on the river Campaspe.

Carlshue lies to the right, about three miles distant, on rather low land; this is the chief station of the Government escort; the barrack accommodation is first-rate, with stabling and paddocks for the horses, &c.

Kyneton is about sixty-one miles from Melbourne. There are two large inns, with ample accommodation for four hundred people between them, several stores, with almost every needful article. A neat little church, capable of holding nearly three hundred persons, with a school

and parsonage. There is a resident magistrate and constabulary, with a police-court and gaol in progress of erection. The township is rather straggling, but what houses there are have a very picturesque appearance. The only draw-back to this little town is the badness of the streets. Although it is rather on an elevated spot, the streets and roads, from the loamy nature of the sod, are a perfect quagmire, even abominable in summer time. The charges here are high, but not extortionate, as, besides the two inns alluded to, there are several coffee-shops and lodging-houses; so competition has its effect even in the bush.

The Campaspe is a large river, and is crossed by a substantial timber bridge.

We still adhered to our original plan of camping out; a few necessaries were purchased in the town, and after continuing our journey to a little distance from it, we halted for the night.

TUESDAY 14.--This morning commenced with a colonial shower, which gave us all a good drenching. Started about eight o'clock; returned to Kyneton; crossed the bridge, and passed several farm-houses. The country here is very changeable, sometimes flat and boggy, at others, very hilly and stony. We were obliged to ford several small creeks, evidently tributaries to the Campaspe, and at about ten miles from Kyneton, entered the Coliban range, which is thickly wooded. The river itself is about fourteen miles from Kyneton. Here we camped, in the pouring rain. Some of our party walked to the town of Malmsbury, about a mile and a half from our camping place. The town consisted of about three tents, and an inn dignified by the appellation of the "Malmsbury Hotel". It is a two-storied, weather-board, and pale house, painted blue, with a lamp before it of many colours, large enough for half-a-dozen people to dine in. It (the inn, not the lamp,) is capable of accommodating two hundred people, independent of which there is a large tent, similar to the booths at a fair, about 100 feet long by 30 wide, for the convenience of those who prefer sleeping under cover when the house is full. Being hungry with their walk, our comrades dined here, for which they paid 3s. 6d. a-piece; ale was 1s. 6d. a glass; brandy 2s. per half glass, or "nobbler;" cheese, 4s. 6d. a pound; bread, 5s. the four-pound loaf; wine, 25s. a bottle. By the time they returned, we had struck our tents, intending to cross a muddy-banked creek that lay in our road that evening, as we were told that the waters might be too swollen to do it next day. The water reached above their waists, and as my usual post was very insecure, I was obliged to be carried over on their shoulders, which did not prevent my feet from being thoroughly soaked before reaching the other side, where we remained all night.

WEDNESDAY, 15.--Rainy day again, so much so, that we thought it advisable not to shift our quarters. In the afternoon, three returning diggers pitched their tents not far from ours. They were rather sociable, and gave us a good account of the diggings. They had themselves been very fortunate. On the same day that we had been idly resting on the borders of the Black Forest, they had succeeded in

taking twenty-three pounds weight out of their claim, and two days after, two hundred and six ounces more, making, in all, gold to the value (in England) of about eighteen hundred pounds. They were returning to Melbourne for a spree, (which means to fling their gains away as quickly as possible,) and then as soon as the dry season was regularly set in, they meant to return to Bendigo for another spell at work. On representing to them the folly of not making better use of their hard-earned wages, the answer invariably was, "Plenty more to be got where this came from," an apt illustration of the proverb, "light come, light go." Two of these diggers had with them their licences for the current month, which they offered to sell for ten shillings each; two of our company purchased them. This, although a common proceeding, was quite illegal, and, of course, the two purchasers had to assume for the rest of the month the names of the parties to whom the licences had been issued. As evening approached, our new acquaintances became very sociable, and amused us with their account of the diggings; and the subject of licensing being naturally discussed, led to our being initiated into the various means of evading it, and the penalties incurred thereby. One story they related amused us at the time, and as it is true I will repeat it here, though I fancy the lack of oral communication will subtract from it what little interest it did possess.

Before I commence, I must give my readers some little insight into the nature of the licence tax itself. The licence, (for which thirty shillings, or half an ounce of gold, is paid per month) is in the following form:

VICTORIA GOLD LICENCE.

No. 1710, Sept. 3, 1852.

The Bearer, Henry Clements, having paid to me the Sum of One Pound, Ten Shillings, on account of the Territorial Revenue, I hereby Licence him to dig, search for, and remove Gold on and from any such Crown Land within the Upper Loddon District, as I shall assign to him for that purpose during the month of September, 1852, not within half-a-mile of any Head station.

This Licence is not transferable, and to be produced whenever demanded by me or any other person acting under the Authority of the Government, and to be returned when another Licence is issued.

(SIGNED) B. BAXTER, Commissioner.

At the back of the Licence are the following rules:

REGULATIONS TO BE OBSERVED BY THE PERSONS DIGGING FOR GOLD, OR OTHERWISE EMPLOYED AT THE GOLD FIELDS.

1. Every Licensed Person must always have his Licence with him, ready

to be produced whenever demanded by a Commissioner, or Person acting under his instructions, otherwise he is liable to be proceeded against as an Unlicensed person.

2. Every Person digging for Gold, or occupying Land, without a Licence, is liable by Law to be fined, for the first offence, not exceeding 5 pounds; for a second offence, not exceeding 15 pounds; and for a subsequent offence, not exceeding 30 pounds.

3. Digging for Gold is not allowed within Ten feet of any Public Road, nor are the Roads to be undermined.

4. Tents or buildings are not to be erected within Twenty feet of each other, or within Twenty feet of any Creek.

5. It is enjoined that all Persons at the Gold Fields maintain and assist in maintaining a due and proper observance of Sundays.

* * * * *

So great is the crowd around the Commissioner's tent at the beginning of the month, that it is a matter of difficulty to procure it, and consequently the inspectors rarely begin their rounds before the 10th, when (as they generally vary the fine according to the date at which the delinquency is discovered), a non-licensed digger would have the pleasure of accompanying a crowd of similar offenders to the Commissioners, sometimes four or five miles from his working-place, pay a fine of about 3 pounds, and take out a licence. After the 20th of the month, the fine inflicted is generally from 5 pounds to 10 pounds and a licence, which is rather a dear price to pay for a few days' permission to dig, as a licence, although granted on the 30th of one month, would be unavailable for the next. The inspectors are generally strong-built, rough-looking customers, they dress like the generality of the diggers, and are only known by their carrying a gun in lieu of a pick or shovel. Delinquents unable to pay the fine, have the pleasure of working it out on the roads.

Now for my story--such as it is.

Mike and Robert were two as good mates as any at the Mount Alexander diggings. They had had a good spell of hard work, and, as is usually the way, returned to Melbourne for a holiday at Christmas-time; and then it was that the bright eyes of Susan Hinton first sowed discord between them. Mike was the successful wooer, and the old man gave his consent; for Mike, with one exception, had contrived to make himself a favourite with both father and daughter. The exception was this. Old Hinton was a strict disciplinarian--one of what is called the "good old school"--he hated radicals, revolutionists, and reformers, or any opposition to Church or State. Mike, on the contrary, loved nothing better than to hold forth against the powers that be; and it was his greatest boast that Government had never pocketed a farthing from him in the way of a licence. This, in the old man's eyes, was his solitary fault, and when Mike declared his intention of taking another

trip to the "lottery fields" before taking a ticket in the even greater lottery of marriage, he solemnly declared that no daughter of his should ever marry a man who had been openly convicted of in any way evading the licence fee.

This declaration from any other man, who had already promised his daughter in marriage, would not have had much weight; but Mike knew the stern, strict character of Hinton, and respected this determination accordingly. The day of their departure arrived, and with a tearful injunction to bear in mind her father's wishes, Susan bade her lover farewell, and Robert and he proceeded on their journey. Full of his own happiness, Mike had never suspected his comrade's love for Susan, and little dreamt he of the hatred against himself to which it had given birth--hatred the more to be dreaded since it was concealed under a most friendly exterior.

For the first month Mike behaved to the very letter of the law, and having for the sum of one pound ten shillings purchased his legal right to dig for gold, felt himself a most exemplary character. Success again crowned their efforts, and a speedy return to Melbourne was contemplated. In the ardour of this exciting work another month commenced, and Mike at first forgot and then neglected to renew his licence. "The inspector rarely came his rounds before the 14th; the neighbourhood was considered deserted--fairly 'worked out;' he'd never come round there." Thus argued Mike, and his friend cordially agreed with him. "Lose a day's work standing outside the Commissioner's tent broiling in a crowd, when two days would finish the job? Not he, indeed! Mike might please himself, but HE shouldn't get a licence;" and this determination on the part of his "mate" settled the matter.

In one respect Mike's self-security was not unfounded; the gully in which their tent was now pitched was nearly deserted. Some while previous there had been a great rush to the place, so great that it was almost excavated; then the rush took a different direction, and few now cared to work on the two or three spots that had been left untouched. Like many other localities considered "worked out," as much remained in the ground as had been taken from it, and as each day added to their store, Mike's hilarity increased.

It was now the 10th of the month; their hole had been fairly "bottomed," a nice little nest of nuggets discovered, their gains divided, and the gold sent down to the escort-office for transit to Melbourne. A few buckets-full of good washing-stuff was all that was left undone.

"To-day will finish that," thought Mike, and to it he set with hearty good-will, to the intense satisfaction of his comrade, who sat watching him at a little distance. Suddenly Mike felt a heavy hand upon his shoulder: he looked up, and saw before him--the inspector. He had already with him a large body of defaulters, and Mike little doubted but that he must be added to their number. Old Hinton's determined speech, Susan's parting words and tears, flashed across his mind.

"You've lost your bonnie bride," muttered Robert, loud enough to reach his rival's ears.

Mike glanced at him, and the look of triumph he saw there roused every spark of energy within him, and it was in a tone of well-assumed composure that he replied to the inspector, "My licence is in my pocket, and my coat is below there;" and without a moment's hesitation sprang into his hole to fetch it. Some minutes elapsed. The inspector waxed impatient. A suspicion of the truth flashed across Robert's mind, and he too descended the hole. THERE was the coat and the licence of the past month in the pocket; but the owner had gone, vanished, and an excavation on one side which led into the next hole and thence into a complete labyrinth underground, plainly pointed out the method of escape. Seeing no use in ferreting the delinquent out of so dangerous a place, the inspector sulkily withdrew, though not without venting some of his ill-humour upon Robert, at whose representations, made to him the day previous, he had come so far out of his road.

But let us return to Mike. By a happy thought, he had suddenly remembered that whilst working some days before in the hole, his pick had let in daylight on one side, and the desperate hope presented itself to his mind that he might make a passage into the next pit, which he knew led into others, and thus escape. His success was beyond his expectation; and he regained the open air at a sufficient distance from his late quarters to escape observation. Once able to reflect calmly upon the event of the morning, it required little discrimination to fix upon Robert his real share in it. And now there was no time to lose in returning to Melbourne, and prevent by a speedy marriage any further attempt to set his intended father-in-law against him. The roads were dry, for it was the sultry month of February; and two days saw him beside his lady-love.

Although railroads are as yet unknown in Australia, everything goes on at railroad speed; and a marriage concocted one day is frequently solemnized the next. His eagerness, therefore, was no way remarkable. No time was lost; and when, three days after Mike's return, Robert (with his head full of plots and machinations) presented himself at old Hinton's door, he found them all at a well-spread wedding breakfast, round which were gathered a merry party, listening with a digger's interest to the way in which the happy bridegroom had evaded the inspector. Mike had wisely kept the story till Susan was his wife.

THURSDAY 16.--With great delight we hailed the prognostications of a fine day, and, after having eaten a hearty breakfast on the strength of it, we recommenced our travels, and crossed the Coliban Bridge. The Coliban is a fine river running through a beautiful valley bounded with green trees; the bridge is a timber one, out of repair, and dangerous. A township called Malmsbury has been laid out here in small allotments with the expectation of a future city; but as yet not a house has been erected, with the exception of the "hotel" before mentioned, putting one in mind of the American Eden in "Martin Chuzzlewit." A mile beyond the Coliban are the washing huts of John Orr's Station, and about three

miles to the left is his residence; the house is stone, with verandahs, the garden and vineyards are prettily laid out.

After passing the bridge, we took the right-hand road, which led us through a low country, and across two or three tributary creeks; we then reached the neighbourhood of Saw-pit Gully, so called from the number of saw-pits there, which formerly gave employment to numerous sawyers, whose occupation--it is almost needless to state--is now deserted. It is surrounded with fine large timber; there are several coffee-shops, a blacksmith's and wheelright's, and a neat little weather-board inn.

At this part, our German friends bade us farewell, to follow out their original plan of going to Forest Creek; they had persuaded four others to accompany them, so our number was reduced to fifteen, myself included. The scenery now became very beautiful, diversified with hill and dale, well wooded, with here and there a small creek, more agreeable to look at than to cross, as there were either no bridges or broken-down ones. The loveliness of the weather seemed to impart energy even to our horses; and we did not pitch our tents till we had travelled full sixteen miles. We were now close beside Mount Alexander, which is nearly covered with timber, chiefly white gum, wattle and stringy bark.

FRIDAY, 17.--A lovely morning; we proceeded in excellent spirits, passing some beautiful scenery, though rather monotonous. During the first few miles, we went across many little creeks, in the neighbourhood of which were indications that the diggers had been at work. These symptoms we hailed with intense delight. Gregory told us the history of a hole in this neighbourhood, out of which five people cleared 13,000 pounds worth of gold each in about a few hours. In lieu of sinking a shaft, they commenced in a gully (colonial for valley), and drove a hole on an inclined plane up the side of the hill or rise. However wet the season, they could never be inconvenienced, as the very inclination would naturally drain the hole. Such a precaution was not needed, as the whole party were perfectly satisfied with the success they had had without toiling for more. The country between here and the "Porcupine Inn" is exceedingly beautiful--not unlike many parts in the lowlands of Wales. About eight miles on the road we pass Barker's Creek, which runs through a beautiful vale.

We camped this evening about four or five miles from Bendigo, and some miles from the "Porcupine Inn," which we left behind us. The "Porcupine" is a newly built inn on an old spot, for I believe there was an inn in existence there before the diggings were ever heard or thought of. The accommodation appears on rather a small scale. Near it is a portion of the station of the Messrs. Gibson, through which the public road runs; some parts are fine, others wooded and swampy.

SATURDAY, 18.--Fine day; we now approached Bendigo. The timber here is very large. Here we first beheld the majestic iron bark, EUCALYPTI, the trunks of which are fluted with the exquisite regularity of a Doric column; they are in truth the noblest ornaments of these mighty

forests. A few miles further, and the diggings themselves burst upon our view. Never shall I forget that scene, it well repaid a journey even of sixteen thousand miles. The trees had been all cut down; it looked like a sandy plain, or one vast unbroken succession of countless gravel pits--the earth was everywhere turned up--men's heads in every direction were popping up and down from their holes. Well might an Australian writer, in speaking of Bendigo, term it "The Carthage of the Tyre of Forest Creek." The rattle of the cradle, as it swayed to and fro, the sounds of the pick and shovel, the busy hum of so many thousands, the innumerable tents, the stores with large flags hoisted above them, flags of every shape, colour, and nation, from the lion and unicorn of England to the Russian eagle, the strange yet picturesque costume of the diggers themselves, all contributed to render the scene novel in the extreme.

We hurried through this exciting locality as quickly as possible; and, after five miles travelling, reached the Eagle Hawk Gully, where we pitched our tents, supped, and retired to rest--though, for myself at least, not to sleep. The excitement of the day was sufficient cure for drowsiness. Before proceeding with an account of our doings at the Eagle Hawk, I will give a slight sketch of the character and peculiarities of the diggings themselves, which are of course not confined to one spot, but are the characteristics that usually exist in any auriferous regions, where the diggers are at work. I will leave myself, therefore, safely ensconced beneath a tent at the Eagle Hawk, and take a slight and rapid survey of the principal diggings in the neighbourhood from Saw-pit Gully to Sydney Flat.

Chapter VI.

THE DIGGINGS

Of the history of the discovery of gold in Australia I believe few are ignorant; it is therefore necessary that my recapitulation of it should be as brief as possible. The first supposed discovery took place some sixty years ago, at Port Jackson. A convict made known to Governor Phillip the existence of an auriferous region near Sydney, and on the locality being examined, particles of real gold-dust were found. Every one was astonished, and several other spots were tried without success. Suspicion was now excited, and the affair underwent a thorough examination, which elicited the following facts. The convict, in the hope of obtaining his pardon as a reward, had filed a guinea and some brass buttons, which, judiciously mixed, made a tolerable pile of gold-dust, and this he carefully distributed over a small tract of sandy land. In lieu of the expected freedom, his ingenuity was rewarded with close confinement and other punishments. Thus ended the first idea of a gold-field in those colonies.

In 1841 the Rev. W. B. Clarke expressed his belief in the existence of gold in the valley of the Macquarie, and this opinion was greatly confirmed by the observations of European geologists on the Uralian Mountains. In 1849 an indisputable testimony was added to these opinions by a Mr. Smith, who was then engaged in some iron works, near Berrima, and who brought a splendid specimen of gold in quartz to the Colonial Secretary. Sir C. A. Fitzroy evinced little sympathy with the discovery, and in a despatch to Lord Grey upon the subject, expressed his opinion that "any investigation that the Government might institute with the view of ascertaining whether gold did in reality exist to any extent or value in that part of the colony where it was supposed from its geological formation that metal would be found, would only tend to agitate the public mind, &c."

Suddenly, in 1851, at the time that the approaching opening of the Crystal Palace was the principal subject of attention in England, the colonies of Australia were in a state of far greater excitement, as the news spread like wild-fire, far and wide, that gold was really there. To Edward Hammond Hargreaves be given the honour of this discovery. This gentleman was an old Australian settler, just returned from a trip to California, where he had been struck by the similarity of the geological formation of the mountain ranges in his adopted country to that of the Sacramento district. On his return, he immediately searched for the precious metal; Ophir, the Turon, and Bathurst well repaid his labour. Thus commenced the gold diggings of New South Wales.

The good people of Victoria were rather jealous of the importance given by these events to the other colony. Committees were formed, and rewards were offered for the discovery of a gold-field in Victoria. The announcement of the Clunes Diggings in July, 1851, was the result; they were situated on a tributary of the Loddon. On September 8, those of Ballarat, and on the 10th those of Mount Alexander completely satisfied the most sceptical as to the vast mineral wealth of the colony. Bendigo soon was heard of; and gully after gully successively attracted the attention of the public by the display of their golden treasures.

The names given to these gullies open a curious field of speculation. Many have a sort of digger's tradition respecting their first discovery. The riches of Peg Leg Gully were brought to light through the surfacing of three men with wooden legs, who were unable to sink a hole in the regular way. Golden Gully was discovered by a man who, whilst lounging on the ground and idly pulling up the roots of grass within his reach, found beneath one a nest of golden nuggets. Eagle Hawk derives its name from the number of eagle-hawks seen in the gully before the sounds of the pick and shovel drove them away. Murderer's Flat and Choke'em Gully tell their own tale. The Irish clan together in Tipperary Gully. A party of South Australians gave the name of their chief town to Adelaide Gully. The Iron Bark is so called from the magnificent trees which abound there. Long, Piccaninny, and Dusty Gully need no explanation. The Jim Crow ranges are appropriately so called, for it is only by keeping up a sort of Jim Crow dancing

movement that one can travel about there; it is the roughest piece of country at the diggings. White Horse Gully obtained its name from a white horse whose hoofs, whilst the animal in a rage was plunging here and there, flung up the surface ground and disclosed the treasures beneath. In this gully was found the famous "John Bull Nugget," lately exhibited in London. The party to whom it belonged consisted of three poor sailors; the one who actually discovered it had only been a fortnight at the diggings. The nugget weighed forty-five pounds, and was only a few inches beneath the surface. It was sold for 5,000 pounds; a good morning's work that!

Let us take a stroll round Forest Creek--what a novel scene!--thousands of human beings engaged in digging, wheeling, carrying, and washing, intermingled with no little grumbling, scolding and swearing. We approach first the old Post-office Square; next our eye glances down Adelaide Gully, and over the Montgomery and White Hills, all pretty well dug up; now we pass the Private Escort Station, and Little Bendigo. At the junction of Forest, Barker, and Campbell Creeks we find the Commissioners' quarters--this is nearly five miles from our starting point. We must now return to Adelaide Gully, and keep alongside Adelaide Creek, till we come to a high range of rocks, which we cross, and then find ourselves near the head-waters of Fryer's Creek. Following that stream towards the Loddon, we pass the interesting neighbourhood of Golden Gully, Moonlight Flat, Windlass and Red Hill; this latter which covers about two acres of ground is so called from the colour of the soil, it was the first found, and is still considered as the richest auriferous spot near Mount Alexander. In the wet season, it was reckoned that on Moonlight Flat one man was daily buried alive from the earth falling into his hole. Proceeding north-east in the direction of Campbell's Creek, we again reach the Commissioners' tent.

The principal gullies about Bendigo are Sailors's, Napoleon, Pennyweight, Peg Leg, Growler's, White Horse, Eagle Hawk, Californian, American, Derwent, Long, Picaninny, Iron Bark, Black Man's, Poor Man's, Dusty, Jim Crow, Spring, and Golden--also Sydney Flat, and Specimen Hill--Haverton Gully, and the Sheep-wash. Most of these places are well-ransacked and tunnelled, but thorough good wages may always be procured by tin dish washing in deserted holes, or surface washing.

It is not only the diggers, however, who make money at the Gold Fields. Carters, carpenters, storemen, wheelwrights, butchers, shoemakers, &c., usually in the long run make a fortune quicker than the diggers themselves, and certainly with less hard work or risk of life. They can always get from one to two pounds a day without rations, whereas they may dig for weeks and get nothing. Living is not more expensive than in Melbourne: meat is generally from 4d. to 6d. a pound, flour about 1s. 6d a pound, (this is the most expensive article in house-keeping there,) butter must be dispensed with, as that is seldom less than 4s. a pound, and only successful diggers can indulge in such articles as cheese, pickles, ham, sardines, pickled salmon, or spirits, as all these things, though easily procured if you have gold to throw away, are expensive, the last-named article (diluted with water or

something less innocuous) is only to be obtained for 30s. a bottle.

The stores, which are distinguished by a flag, are numerous and well stocked. A new style of lodging and boarding house is in great vogue. It is a tent fitted up with stringy bark couches, ranged down each side the tent, leaving a narrow passage up the middle. The lodgers are supplied with mutton, damper, and tea, three times a day, for the charge of 5s. a meal, and 5s. for the bed; this is by the week, a casual guest must pay double, and as 18 inches is on an average considered ample width to sleep in, a tent 24 feet long will bring in a good return to the owner.

The stores at the diggings are large tents, generally square or oblong, and everything required by a digger can be obtained for money, from sugar-candy to potted anchovies; from East India pickles to Bass's pale ale; from ankle jack boots to a pair of stays; from a baby's cap to a cradle; and every apparatus for mining, from a pick to a needle. But the confusion--the din--the medley--what a scene for a shop walker! Here lies a pair of herrings dripping into a bag of sugar, or a box of raisins; there a gay-looking bundle of ribbons beneath two tumblers, and a half-finished bottle of ale. Cheese and butter, bread and yellow soap, pork and currants, saddles and frocks, wide-awakes and blue serge shirts, green veils and shovels, baby linen and tallow candles, are all heaped indiscriminately together; added to which, there are children bawling, men swearing, store-keeper sulky, and last, not LEAST, women's tongues going nineteen to the dozen.

Most of the store-keepers are purchasers of gold either for cash or in exchange for goods, and many are the tricks from which unsuspecting diggers suffer. One great and outrageous trick is to weigh the parcels separately, or divide the whole, on the excuse that the weight would be too much for the scales; and then, on adding up the grains and pennyweights, the sellers often lose at least half an ounce. On one occasion, out of seven pounds weight, a party once lost an ounce and three quarters in this manner. There is also the old method of false beams--one in favour of the purchaser--and here, unless the seller weighs in both pans, he loses considerably. Another mode of cheating is to have glass pans resting on a piece of green baize; under this baize, and beneath the pan which holds the weights, is a wetted sponge, which causes that pan to adhere to the baize, and consequently it requires more gold to make it level; this, coupled with the false reckoning, is ruinous to the digger. In town, the Jews have a system of robbing a great deal from sellers before they purchase the gold-dust (for in these instances it must be DUST): it is thrown into a zinc pan with slightly raised sides, which are well rubbed over with grease; and under the plea of a careful examination, the purchaser shakes and rubs the dust, and a considerable quantity adheres to the sides. A commoner practice still is for examiners of gold-dust to cultivate long finger-nails, and, in drawing the fingers about it, gather some up.

Sly grog selling is the bane of the diggings. Many--perhaps nine-tenths--of the diggers are honest industrious men, desirous of getting a little there as a stepping-stone to independence elsewhere;

but the other tenth is composed of outcasts and transports--the refuse of Van Diemen's Land--men of the most depraved and abandoned characters, who have sought and gained the lowest abyss of crime, and who would a short time ago have expiated their crimes on a scaffold. They generally work or rob for a space, and when well stocked with gold, retire to Melbourne for a month or so, living in drunkenness and debauchery. If, however, their holiday is spent at the diggings, the sly grog-shop is the last scene of their boisterous career. Spirit selling is strictly prohibited; and although Government will license a respectable public-house on the ROAD, it is resolutely refused ON the diggings. The result has been the opposite of that which it was intended to produce. There is more drinking and rioting at the diggings than elsewhere, the privacy and risk gives the obtaining it an excitement which the diggers enjoy as much as the spirit itself; and wherever grog is sold on the sly, it will sooner or later be the scene of a riot, or perhaps murder. Intemperance is succeeded by quarrelling and fighting, the neighbouring tents report to the police, and the offenders are lodged in the lock-up; whilst the grog-tent, spirits, wine, &c., are seized and taken to the Commissioners. Some of the stores, however, manage to evade the law rather cleverly--as spirits are not SOLD, "my friend" pays a shilling more for his fig of tobacco, and his wife an extra sixpence for her suet; and they smile at the store-man, who in return smiles knowingly at them, and then glasses are brought out, and a bottle produced, which sends forth NOT a fragrant perfume on the sultry air.

It is no joke to get ill at the diggings; doctors make you pay for it. Their fees are--for a consultation, at their own tent, ten shillings; for a visit out, from one to ten pounds, according to time and distance. Many are regular quacks, and these seem to flourish best. The principal illnesses are weakness of sight, from the hot winds and sandy soil, and dysentery, which is often caused by the badly-cooked food, bad water, and want of vegetables.

The interior of the canvas habitation of the digger is desolate enough; a box on a block of wood forms a table, and this is the only furniture; many dispense with that. The bedding, which is laid on the ground, serves to sit upon. Diogenes in his tub would not have looked more comfortless than any one else. Tin plates and pannicans, the same as are used for camping up, compose the breakfast, dinner, and tea service, which meals usually consist of the same dishes--mutton, damper, and tea.

In some tents the soft influence of our sex is pleasingly apparent: the tins are as bright as silver, there are sheets as well as blankets on the beds, and perhaps a clean counterpane, with the addition of a dry sack or piece of carpet on the ground; whilst a pet cockatoo, chained to a perch, makes noise enough to keep the "missus" from feeling lonely when the good man is at work. Sometimes a wife is at first rather a nuisance; women get scared and frightened, then cross, and commence a "blow up" with their husbands; but all their railing generally ends in their quietly settling down to this rough and primitive style of living, if not without a murmur, at least to all appearance with the

determination to laugh and bear it. And although rough in their manners, and not over select in their address, the digger seldom wilfully injures a woman; in fact, a regular Vandemonian will, in his way, play the gallant with as great a zest as a fashionable about town --at any rate, with more sincerity of heart.

Sunday is kept at the diggings in a very orderly manner; and among the actual diggers themselves, the day of rest is taken in a VERBATIM sense. It is not unusual to have an established clergyman holding forth near the Commissioners' tent and almost within hearing will be a tub orator expounding the origin of evil, whilst a "mill" (a fight with fisticuffs) or a dog fight fills up the background.

But night at the diggings is the characteristic time: murder here--murder there--revolvers cracking--blunderbusses bombing--rifles going off--balls whistling--one man groaning with a broken leg--another shouting because he couldn't find the way to his hole, and a third equally vociferous because he has tumbled into one--this man swearing--an other praying--a party of bacchanals chanting various ditties to different time and tune, or rather minus both. Here is one man grumbling because he has brought his wife with him, another ditto because he has left his behind, or sold her for an ounce of gold or a bottle of rum. Donnybrook Fair is not to be compared to an evening at Bendigo.

Success at the diggings is like drawing lottery tickets--the blanks far outnumber the prizes; still, with good health, strength, and above all perseverance, it is strange if a digger does not in the end reap a reward for his labour. Meanwhile, he must endure almost incredible hardships. In the rainy season, he must not murmur if compelled to work up to his knees in water, and sleep on the wet ground, without a fire, in the pouring rain, and perhaps no shelter above him more waterproof than a blanket or a gum tree; and this not for once only, but day after day, night after night. In the summer, he must work hard under a burning sun, tortured by the mosquito and the little stinging March flies, or feel his eyes smart and his throat grow dry and parched, as the hot winds, laden with dust, pass over him. How grateful now would be a draught from some cold sparkling streamlet; but, instead, with what sort of water must he quench his thirst? Much the same, gentle reader, as that which runs down the sides of a dirty road on a rainy day, and for this a shilling a bucket must be paid. Hardships such as these are often the daily routine of a digger's life; yet, strange to say, far from depressing the spirits or weakening the frame, they appear in most cases to give strength and energy to both. This is principally owing to the climate, which even in the wet season is mild and salubrious.

Perhaps nothing will speak better for the general order that prevails at the diggings, than the small amount of physical force maintained there by Government to keep some thousands of persons of all ages, classes, characters, religions and countries in good humour with the laws and with one another. The military force numbers 130, officers and men; the police about 300.

The Government escort is under the control of Mr. Wright, Chief Commissioner; it consists of about forty foot and sixty mounted police, with the usual complement of inspectors and sergeants; their uniform is blue--with white facings, their head-quarters are by the Commissioners' tent, Forest Creek.

The private escort uniform is a plain blue frock coat and trowsers. It is under the superintendence of Mr. Wilkinson; the head-quarters are at Montgomery Hill, Forest Creek. Both these escorts charge one per cent for conveying gold.

For the Victoria diggings, there is a Chief Commissioner, one Acting Resident Commissioner; one Assistant Commissioner at Ballarat, one at Fryer's Creek, five at Forest Creek, and six at Bendigo.

Provision is made by Government for the support, at the mines, of two clergymen of each of the four State paid churches of England, Scotland, Rome, and Wesleyan, at a salary of 300 pounds a year.

Chapter VII.

EAGLE HAWK GULLY

Before commencing an account of our operations at the Eagle Hawk, it will be necessary to write a few words in description of our gold-digging party there; their Christian names will be sufficient distinction, and will leave their incognito undisturbed.

This party, as I have said before, consisted of five gentlemen, including my brother. Of the latter I shall only say that he was young and energetic, more accustomed to use his brains than his fingers, yet with a robust frame, and muscles well strengthened by the various exercises of boating, cricketing, &c., with which our embryo collegians attempt to prepare themselves for keeping their "terms."

Frank ----- (who, from being a married man, was looked up to as the head of our rather juvenile party) was of a quiet and sedate disposition, rather given to melancholy, for which in truth he had cause. His marriage had taken place without the sanction--or rather in defiance of the wishes--of his parents, for his wife was portionless, and in a station a few grades, as they considered, below his own; moreover, Frank himself was not of age. Private income, independent of his parents, he had none. A situation as clerk in a merchant's office was his only resource, and during three years he had eked out his salary to support a delicate wife--whose ill health was a neverfailing source of anxiety and expense--two infants, and himself. An unexpected legacy of

500 pounds from a distant relative at last seemed to open a brighter prospect before them; and leaving his wife and children with their relatives, he quitted England to seek in a distant land a better home than all his exertions could procure for them in their own country. I never felt surprised or offended at his silent and preoccupied manner, accompanied at times by great depression of spirits, for it was an awful responsibility for one so young, brought up as he had been in the greatest luxury, as the eldest son of a wealthy merchant, to have not only himself but others nearest and dearest to maintain by his own exertions.

William ----, a tall, slight, and rather delicate looking man, is the next of our party whom I shall mention. His youth had been passed at Christ's Hospital. This he quitted with the firm conviction (in which all his friends of course participated) that he had been greatly wronged by not having been elected a Grecian; and a rich uncle, incited by the beforementioned piece of injustice, took him under his care, and promised to settle him in the world as soon as a short apprenticeship to business had been gone through. A sudden illness put a stop to all these schemes. The physicians recommended change of air, a warmer climate, a trip to Australia. William had relatives residing in Melbourne, so the journey was quickly decided upon, a cabin taken; and the invalid rapidly recovering beneath the exhilarating effects of the sea-breezes. How refreshing are they to the sick! how caressingly does the soft sea-air fan the wan cheeks of those exhausted with a life passed amidst the brick walls and crowded, noisy streets of a city; and William, who at first would have laughed at so ridiculous a supposition, ere the four months' voyage was terminated, had gained strength and spirits sufficient to make him determine to undertake a trip to the diggings.

He was a merry light-hearted fellow, fonder of a joke than hard work, yet ever keeping a sharp eye to the "main chance," as the following anecdote will prove.

One day during our stay in Melbourne he came to me, and said, laughing:

"Well! I've got rid of one of the bad HABITS I had on board the ----."

"Which?" was my reply.

"That old frock-coat I used to wear in the cold weather whilst we rounded the Cape. A fellow down at Liardet's admired the cut, asked me to sell it. I charged him four guineas, and walked into town in my shirt-sleeves; soon colonized, eh?"

Richard ----- was a gay young fellow of twenty, the only son of a rich member of the stock Exchange. In a fit of spleen, because the parental regulations required him always to be at home by midnight, he shipped himself off to Australia, trusting that so energetic a step "would bring the governor to his senses." He was music-mad, and appeared to know every opera by heart, and wearied us out of all patience with his everlasting humming of "Ciascun lo dice" "Non piu mesta," &c.

Octavius ----- was the eighth son of a poor professional man, who, after giving him a good general education, sent him with a small capital to try his fortune in the colonies. For this he was in every way well fitted, being possessed of a strong constitution, good common sense, and simple inexpensive habits; he was only nineteen, and the youngest of the male portion of our party.

The day after our arrival at the diggings, being Sunday, we passed in making ourselves comfortable, and devising our future plans. We determined to move from our present quarters, and pitch our tents higher up the gully, near Montgomery's store. This we accomplished the first thing on Monday morning and at about a hundred yards from us our four shipmates also fixed themselves, which added both to our comfort and security.

A few words for their introduction.

One of them was a Scotchman, who wished to make enough capital at the mines to invest in a sheep-run; and as his countrymen are proverbially fortunate in the colonies, I think it possible he may some time hence be an Australian MILLIONAIRE. Another of these was an architect, who was driven, as it were, to the diggings, because his profession, from the scarcity of labour, was at the time almost useless in Melbourne. The third was, or rather had been, a house-painter and decorator, who unfortunately possessed a tolerably fine voice, which led him gradually to abandon a good business to perform at concerts. Too late he found that he had dropped the substance for the shadow; emigration seemed his only resource; so leaving a wife and large family behind, he brought his mortified vanity and ruined fortunes to begin the world anew with in Australia. He was the only one whose means prevented him from taking a share in our venture; but to avoid confusion, the Scotchman subscribed twice the usual sum, thus securing double Profits. The fourth was a gentleman farmer, whose sole enemy, by his account, was Free Trade, and who held the names Cobden and Bright in utter detestation.

As soon as the tents were pitched, all set to work to unpack the dray: and after taking out sufficient flour, sugar, tea, &c., for use, the remainder of the goods were taken to the nearest store, where they were sold at an average of five times their original costs: the most profitable portion of the cargo consisted of some gunpowder and percussion-caps. The day after, by good fortune, we disposed of the dray and horses for 250 pounds, being only 40 pounds less than we paid for them. As the cost of keeping horses at the diggings is very great (sometimes two or three pounds a day per head), besides the constant risk of their being lost or stolen, we were well satisfied with the bargain; and never did mind young speculators, who five months previous had been utter strangers, accomplish their undertaking to themselves, or less disagreement one with another.

This business settled, the next was to procure licences, which was a walk of nearly five miles to the Commissioners' tent, Bendigo,

and wasted the best part of Wednesday.

Meanwhile we were Seriously debating about again changing our quarters. We found it almost impossible to sleep. Never before could I have imagined that a woman's voice could utter sounds sufficiently discordant to drive repose far from us, yet so it was.

The gentlemen christened her "the amiable female."

The tent of this "amiable" personage was situated at right angles with ours and our shipmates, so that the annoyance was equally felt. Whilst her husband was at work farther down the gully, she kept a sort of sly grog-shop, and passed the day in selling and drinking spirits, swearing, and smoking a short tobacco-pipe at the door of her tent. She was a most repulsive looking object. A dirty gaudy-coloured dress hung unfastened about her shoulders, coarse black hair unbrushed, uncombed, dangled about her face, over which her evil habits had spread a genuine bacchanalian glow, whilst in a loud masculine voice she uttered the most awful words that ever disgraced the mouth of man ten thousand times more awful when proceeding from a woman's lips.

But night was the dreadful time; then, if her husband had been unlucky, or herself made fewer profits during the day, it was misery to be within earshot; so much so, that we decided to leave so uncomfortable a neighbourhood without loss of time, and carrying our tents, &c., higher up the gully we finally pitched them not far from the Portland Stores.

This was done on Thursday, and the same evening two different claims were marked out ready to commence working the next day. These claims were the usual size, eight feet square.

FRIDAY, 24.--Early this morning our late travelling companion, Joe, made his appearance with a sack (full of bran, he said,) on his shoulders. After a little confidential talk with William, he left the sack in our tent, as he had no other safe place to stow it away in till the bran was sold. This gave rise to no suspicion, and in the excitement of digging was quite forgotten.

About noon I contrived to have a damper and a large joint of baked mutton ready for the "day labourers," as they styled themselves. The mutton was baked in a large camp oven suspended from three iron bars, which were fixed in the ground in the form of a triangle, about a yard apart, and were joined together at the top, at which part the oven was hung over a wood fire. This grand cooking machine was, of course, outside the tent. Sometimes I have seen a joint of meat catch fire in one of these ovens, and it is difficult to extinguish it before the fat has burnt itself away, when the meat looks like a cinder.

Our butcher would not let us have less than half a sheep at a time, for which we paid 8s. I was not good housekeeper enough to know how much it weighed, but the meat was very good. Flour was then a shilling a pound, or two hundred pounds weight for nine pounds in money. Sugar was 1s. 6d., and tea 3s. 6d. Fortunately we were Well provided with these three

latter articles.

The hungry diggers did ample justice to the dinner I had provided for them. They brought home a tin-dish full of surface soil, which in the course of the afternoon I attempted to wash.

Tin-dish-washing is difficult to describe. It requires a watchful eye and a skilful hand; it is the most mysterious department of the gold-digging business. The tin dish (which, of course, is round) is generally about eighteen inches across the top, and twelve across the bottom, with sloping sides of three or four inches deep. The one I used was rather smaller. Into it I placed about half the "dirt"--digger's technical term for earth, or soil--that they had brought, filled the dish up with water, and then with a thick stick commenced making it into a batter; this was a most necessary commencement, as the soil was of a very stiff clay. I then let this batter--I know no name more appropriate for it--settle, and carefully poured off the water at the top. I now added some clean water, and repeated the operation of mixing it up; and after doing this several times, the "dirt," of course, gradually diminishing, I was overjoyed to see a few bright specks, which I carefully picked out, and with renewed energy continued this by no means elegant work. Before the party returned to tea I had washed out all the stuff, and procured from it nearly two pennyweights of gold-dust, worth about 6s. or 7s.

Tin-dish-washing is generally done beside a stream, and it is astonishing how large a quantity of "dirt" those who have the knack of doing it well and quickly can knock off in the course of the day. To do this, however, requires great manual dexterity, and much gold is lost by careless washing. A man once extracted ten pounds weight of the precious metal from a heap of soil which his mate had washed too hurriedly.

In the evening Joe made his re-appearance, carrying another sack on his shoulders, which contained a number of empty bottles, and now for the first time we became initiated into the BRAN mystery which had often puzzled us on the road--it seemed so strange a thing to carry up to the diggings. Joe laughed at our innocence, and denied having told us anything approaching a falsehood; a slight suppression of the truth was all he would plead guilty to. I verily believe William had put him up to this dodge, to make us smile when we should have felt annoyed. Being taxed with deceit, said he: "I told you two-thirds truth; there wanted but two more letters to make it BRANDY," and with the greatest SANG-FROID he drew out a small keg of brandy from the first sack and half-filled the bottles with the spirit, after which he filled them all up to the neck with water. The bottles were then corked, and any or all of them politely offered to us at the rate of 30s a piece. We declined purchasing, but he sold them all during the evening, for which we were rather glad, as, had they been discovered by the officials in our tent, a fine of 50 pounds would have been the consequence of our foolish comrades good-nature and joke-loving propensities.

We afterwards found that Master Joe had played the same trick with our

shipmates and with the two doctors, who had bought a tent and settled themselves near our old place by Montgomery's store.

SATURDAY, 25.--The two holes were "bottomed" before noon with no paying result. It had been hard work, and they were rather low-spirited about it. The rest of the day they spent in washing some surface-soil, and altogether collected about 1 ounce and a half of gold-dust, counting the little I had washed out on the Friday. In the evening it was all dried by being placed in a spade over a quick fire. We had before determined to square accounts and divide the gold every Saturday night, but this small quantity was not worth the trouble, so it was laid by in the digger's usual treasury, a German match-box. These round boxes hold on an average eight ounces of gold.

These two unproductive holes had not been very deep. The top, or surface soil, for which a spade or shovel is used, was of clay. This was succeeded by a strata almost as hard as iron--technically called "burnt stuff,"--which robbed the pick of its points nearly as soon as the blacksmith had steeled them at a charge of 2s. 6d. a point. Luckily for their arms, this strata was but thin, and the yellow or blue clay which followed was comparatively easy work--here and there an awkward lump of quartz required the use of the pick. Suddenly they came to some glittering particles of yellow, which, with heartfelt delight they hailed as gold. It WAS MICA. Many are at first deceived by it, but it is soon distinguished by its weight, as the mica will blow away with the slightest puff. After a little useless digging among the clay, they reached the solid rock, and thus having fairly "bottomed," the holes to no purpose, they abandoned them.

SUNDAY, 26.--Although impossible at the diggings to keep this day with those outward observances which are customary in civilized life, we attempted to make as much difference as possible between the day of rest and that of work. Frank performed the office of chaplain, and read the morning service in the calm and serious manner which we expected from him.

I was rather amused to see the alacrity with which, when this slight service was over, they all prepared to assist me in the formation of a huge plum-pudding for the Sunday's dinner. Stoning plums and chopping suet seemed to afford them immense pleasure--I suppose it was a novelty; and, contrary to the fact implied in the old adage, "too many cooks spoil the broth" our pudding turned out A1.

In the afternoon we strolled about, and paid a visit to our shipmates. I was certainly most agreeably surprised by the quiet and order that everywhere prevailed.

MONDAY, 27.--Today our party commenced "sinking" in a new spot at some little distance. The first layer of black soil was removed, and on some being washed in a tin dish, it was found to contain a tolerable portion of gold, and was pronounced to be worth transporting to the tent to be regularly cradled. My first official notice of this fact was from Richard, who entered the tent humming "Suona la tromba," with a bucket

full of this heavy soil in each hand. He broke off in the middle of his song to ask for some water to drink, and grumbled most energetically at such dirty work. He then gave me an account of the morning's doings. After a thin layer of the black surface soil, it appeared they had come to a strata of thick yellow clay, in which gold was often very abundant. This soil, from being so stiff, would require "puddling," a work of which he did not seem to relish the anticipation. Before the day was over, a great number of buckets full of both soils were brought up and deposited in heaps near the tents. All, with the exception of the "operatic" Richard, seemed in good spirits, and were well satisfied with what had been done in so short a time.

In the evening the other party of our shipmates arrived, and were busy fixing their tent at a distance of about forty yards from us. Frank and the other four, though pretty tired with the days labour, lent a helping hand, the united efforts of nine speedily accomplished this business, after which an immense quantity of cold mutton, damper, and tea made a rapid disappearance, almost emptying my larder, which, by the bye, was an old tea-chest.

We asked our friends their motive for leaving the old spot, and they declared they could stand the "amiable female" no longer; she grew worse and worse. "Her tongue was sich" observed the Scotchman, "as wad drive ony pair beastie wild." She had regularly quarrelled with the two doctors because they would not give her a written certificate, that the state of her health required the constant use of spirits. She offered them two guineas for it, which they indignantly refused, and she then declared her intention of injuring their practice as much as possible, which she had power to do, as her tent was of an evening quite the centre of attraction and her influence proportionably great. Pity 'tis that such a woman should be able to mar or make the fortunes of her fellow creatures.

TUESDAY, 28.--The holes commenced yester-day were duly "bottomed," but no nice pocket-full of gold was the result; our shipmates, however, met with better success, having found three small nuggets weighing two to four ounces each at a depth of not quite five feet from the surface.

WEDNESDAY, 29.--To-day was spent in puddling and cradling.

Puddling is on the same principle as tin-dish-washing, only on a much larger scale. Great wooden tubs are filled with the dirt and fresh water, and the former is chopped about in all directions with a spade, so as to set the metal free from the adhesive soil and pipe-clay. Sometimes I have seen energetic diggers tuck up their trowsers, off with their boots, step into the tub, and crush it about with their feet in the same manner as tradition affirms that the London bakers knead their bread. Every now and again the dirtied water is poured off gently, and with a fresh supply, which is furnished by a mate with a long-handled dipper from the stream or pool, you puddle away. The great thing is, not to be afraid of over-work, for the better the puddling is, so much the more easy and profitable is the cradling. After having been well beaten in the tubs, the "dirt" is put into the

hopper of the cradle, which is then rocked gently, whilst another party keeps up a constant supply of fresh water. In the right hand of the cradler is held a thick stick, ready to break up any clods which may be in the hopper, but which a good puddler would not have sent there.

There was plenty of water near us, for a heavy rain during the night had filled several vacated holes, and as there were five pair of hands, we hoped, before evening, greatly to diminish our mud-heaps.

Now for an account of our proceedings.

Two large wooden tubs were firmly secured in the ground and four set to work puddling, whilst Frank busied himself in fixing the cradle. He drove two blocks into the ground; they were grooved for the rockers of the cradle to rest in, so as to let it rock with ease and regularity. The ground was lowered so as to give the cradle a slight slant, and thus enable the water to run off more quickly. If a cradle dips too much, a little gold may wash off with the light sand. The cradling machine, though simple in itself, is rather difficult to describe. In shape and size it resembles an infant's cradle, and over that portion of it where, if for a baby, a hood would be, is a perforated plate with wooden sides, a few inches high all round, forming a sort of box with the perforated plate for a bottom; this box is called the hopper. The dirt is here placed, and the constant supply of water, after well washing the stuff, runs out through a hole made at the foot of the cradle. The gold generally rests on a wooden shelf under the hopper, though sometimes a good deal will run down with the water and dirt into one of the compartments at the bottom, and to separate it from the sand or mud, tin-dish-washing is employed.

As soon as sufficient earth was ready, one began to rock, and another to fill the hopper with water. Richard continued puddling, William, enacted Aquarius for him, whilst a fifth was fully occupied in conveying fresh dirt to the tubs, and taking the puddled stuff from them to the hopper of the cradle. Every now and then a change of hands was made, and thus passed the day. In the evening, the products were found to be one small nugget weighing a quarter of an ounce, and in gold-dust eight pennyweights, ten grains, being worth, at the digging price for gold, about thirty-five shillings. This was rather less than we had less calculated upon, and Richard signified his intention of returning to Melbourne, "He could no longer put up with such ungentlemanly work in so very unintellectual a neighbourhood, with bad living into the bargain." These last words, which were pronounced SOTTO VOCE, gave us a slight clue to the real cause of his dislike to the diggings, though we, did not thoroughly understand it till next morning. It originated in some bottles of mixed pickles which he had in vain wanted Frank, who this week was caterer for the party, to purchase at four shillings a bottle, which sum, as we were all on economical thoughts intent, Frank refused to expend on any unnecessary article of food. This we learnt next morning at breakfast, when Richard congratulated himself on that being the last meal he should make of tea, damper and muton, without the latter having something to render it eatable. The puddling and cradling work had, I fancy, given the

finishing stroke to his disgust. Poor Dick! he met with little commiseration: we could not but remember the thousands in the old country who would have rejoiced at the simple fare he so much despised. William, in his laughing way, observed, "that he was too great a pickle himself, without buying fresh ones."

Richard left us on Thursday morning, and with him went one of the other party, the house-painter and decorator, who also found gold-digging not so Pleasant as he had expected. We afterwards learnt that before reaching Kilmore they separated. Richard arrived safely in Melbourne, and entered a goldbroker's office at a salary of three pounds a week, which situation I believe he now fills; and as "the governor," to use Richard's own expression, "has not yet come to his senses," he must greatly regret having allowed his temper to be the cause of his leaving the comforts of home. His companion, who parted with Richard at Kilmore, was robbed of what little gold he had, and otherwise maltreated, whilst passing through the Black Forest. On reaching Melbourne, he sold everything he possessed, and that not being sufficient, he borrowed enough to pay his passage back to England, where, doubtless, he will swell the number of those whose lack of success in the colonies, and vituperations against them, are only equalled by their unfitness ever to have gone there.

Thursday was past in puddling and cradling, with rather better results than on the first day, still it was not to our satisfaction, and on Friday two pits were sunk. one was shallow, and the bottom reached without a speck of gold making its appearance. The other was left over till the next morning. This was altogether very disheartening work, particularly as the expenses of living were not small. There were many, however, much worse off than ourselves, though here and there a lucky digger excited the envy of all around him. Many were the tricks resorted to in order to deceive new-comers. Holes were offered for sale, in which the few grains that were carefully placed in sight was all that the buyer gained by his purchase.

A scene of this description was enacted this Friday evening, at a little distance from us. The principal actors in it were two in number. One sat a little way from his hole with a heap of soil by his side, and a large tin dish nearly full of dirt in his hand. As he swayed the dish to and fro in the process of washing, an immense number of small nuggets displayed themselves, which fact in a loud tone he announced to his "mate", at the same time swearing at him for keeping at work so late in the evening. This digger, who was shovelling up more dirt from the hole, answered in the same elegant language, calling him an "idle good-for-nought." Every now and then he threw a small nugget to the tin-dish-washer, loudly declaring, "he'd not leave off while them bright bits were growing thick as taters underground."

"Then be d----d if I don't!" shouted the other;" and I'll sell the hole for two hundred yeller boys down."

This created a great sensation among the bystanders, who during the time had collected round, and among whom was a party of three,

evidently "new chums."

"It shall go for a hundred and fifty!" again shouted the washer, giving a glance in the direction in which they stood.

"Going for a hundred, tin-dish as well!" letting some of the water run off, and displaying the gold.

This decided the matter, and one of the three stepped forward and offered the required sum.

"Money down," said the seller; "these here fellers 'll witness it's all reg'lar."

The money was paid in notes, and the purchasers were about to commence possession by taking the tin-dish out of his hand.

"Wait till he's emptied. I promised yer the dish, but not the stuff in it," and turning out the dirt into a small tub the two worthies departed, carrying the tub away with them.

Not a grain of gold did the buyers find in the pit next morning.

SATURDAY, OCTOBER 2.--This day found the four hard at work at an early hour, and words will not describe our delight when they hit upon a "pocket" full of the precious metal. The "pocket" was situated in a dark corner of the hole, and William was the one whose fossicking-knife first brought its hidden beauties to light. Nugget after nugget did that dirty soil give up; by evening they had taken out five pounds weight of gold. Foolish Richard! we all regretted his absence at this discovery.

As the next day was the Sabbath, thirty-six hours of suspense must elapse before we could know whether this was but a passing kindness from the fickle goddess, or the herald of continued good fortune.

This night, for the first time, we were really in dread of an attack, though we had kept our success quite secret, not even mentioning it to our shipmates; nor did we intend to do so until Monday morning, when our first business would be to mark out three more claims round the lucky spot, and send our gold down to the escort-office for security. For the present we were obliged to content ourselves with "planting" it--that is, burying it in the ground; and not a footstep passed in our neighbourhood without our imagining ourselves robbed of the precious treasure, and as it was Saturday night--the noisiest and most riotous at the diggings--our panics were neither few nor far between. So true it is that riches entail trouble and anxiety on their possessor.

AN ADVENTURE

SUNDAY 3.--A fine morning. After our usual service Frank, my brother, and myself, determined on an exploring expedition, and off we went, leaving the dinner in the charge of the others. We left the busy throng of the diggers far behind us, and wandered into spots where the sound of the pick and shovel, or the noise of human traffic, had never penetrated. The scene and the day were in unison; all was harmonious, majestic, and serene. Those mighty forests, hushed in a sombre and awful silence; those ranges of undulating hill and dale never yet trodden by the foot of man; the soft still air, so still that it left every leaf unruffled, flung an intensity of awe over our feelings, and led us from the contemplation of nature to worship nature's God.

We sat in silence for some while deeply impressed by all around us, and, whilst still sitting and gazing there, a change almost imperceptibly came over the face of both earth and sky. The forest swayed to and fro, a sighing moaning sound was borne upon the wind, and a noise as of the rush of waters, dark massive clouds rolled over the sky till the bright blue heavens were completely hidden, and then, ere we had recovered from our first alarm and bewilderment, the storm in its unmitigated fury burst upon us. The rain fell in torrents, and we knew not where to turn.

Taking me between them, they succeeded in reaching an immense shea-oak, under which we hoped to find some shelter till the violence of the rain had diminished; nor were we disappointed, though it was long before we could venture to leave our place of refuge. At length however, we did so, and endeavoured to find our way back to Eagle Hawk Gully. Hopeless task! The ground was so slippery, it was as much as we could do to walk without falling; the mud and dirt clung to our boots, and a heavy rain beat against our faces and nearly blinded us.

"It is clearing up to windward," observed Frank; "another half-hour and the rain will be all but over; let us return to our tree again."

We did so. Frank was correct; in less than the time he had specified a slight drizzling rain was all of the storm that remained.

With much less difficulty we again attempted to return home, but before very long we made the startling discovery that we had completely lost our way, and to add to our misfortune the small pocket-compass, which Frank had brought with him, and which would have now so greatly assisted us, was missing, most probably dropped from his pocket during the skirmish to get under shelter. We still wandered along till stopped by the shades of evening, which came upon us--there is little or no twilight in Australia.

We seated ourselves upon the trunk of a fallen tree, wet, hungry, and,

worst of all, ignorant of where we were. Shivering with cold, and our wet garments hanging most uncomfortably around us, we endeavoured to console one another by reflecting that the next morning we could not fail to reach our tents. The rain had entirely ceased, and providentially for us the night was pitch dark--I say providentially, because after having remained for two hours in this wretched plight a small light in the distance became suddenly visible to us all, so distant, that but for the intensity of the darkness it might have passed unnoticed. "Thank God!" simultaneously burst from our lips.

"Let us hasten there," cried Frank, "a whole night like this may be your sister's death and would ruin the constitution of a giant."

To this we gladly acceded, and were greatly encouraged by perceiving that the light remained stationary. But it was a perilous undertaking. Luckily my brother had managed to get hold of a long stick with which he sounded the way, for either large stones or water-holes would have been awkward customers in the dark; wonderful to relate we escaped both, and when within hailing distance of the light, which we perceived came from a torch held by some one, we shouted with all our remaining strength, but without diminishing our exertions to reach it. Soon--with feelings that only those who have encountered similar dangers can understand--answering voices fell upon our ears. Eagerly we pressed forward, and in the excitement of the moment we relinquished all hold of one another, and attempted to wade through the mud singly.

"Stop! halt!" shouted more than one stentorian voice; but the warning came too late. My feet slipped--a sharp pain succeeded by a sudden chill--a feeling of suffocation--of my head being ready to burst--and I remembered no more.

When I recovered consciousness it was late in the morning, for the bright sun shone upon the ground through the crevices of a sail cloth tent, and so different was all that met my eyes to the dismal scene through which I had so lately passed, and which yet haunted my memory, that I felt that sweet feeling of relief which we experience when, waking from some horrid vision, we become convinced how unsubstantial are its terrors, and are ready to smile at the pain they excited.

That I was in a strange place became quickly evident, and among the distant hum of voices which ever and anon broke the silence not one familiar tone could I recognize. I endeavoured to raise myself so as to hear more distinctly, and then it was that an acute pain in the ankle of the right foot, gave me pretty strong evidence as to the reality of the last night's adventures. I was forced to lie down again, but not before I had espied a hand-bell which lay within reach on a small barrel near my bed. Determined as far as possible to fathom the mystery, I rang a loud peal with it, not doubting but what it would bring my brother to me. My surprise and delight may be easier imagined than described, when, as though in obedience to my summons, I saw a small white hand push aside the canvas at one corner of the tent, and one of my own sex entered.

She was young and fair; her step was soft and her voice most musically gentle. Her eyes were a deep blue, and a rich brown was the colour of her hair, which she wore in very short curls all round her head and parted on one side, which almost gave her the appearance of a pretty boy.

These little particulars I noticed afterwards; at that time I only felt that her gentle voice and kind friendliness of manner inexpressibly soothed me.

After having bathed my ankle, which I found to be badly sprained and cut, she related, as far as she was acquainted with them, the events the previous evening. I learnt that these tents belonged to a party from England, of one of whom she was the wife, and the tent in which I lay was her apartment. They had not been long at the diggings, and preferred the spot where they were to the more frequented parts.

The storm of yesterday had passed over them without doing much damage, and as their tents were well painted over the tops, they managed to keep themselves tolerably dry; but later in the evening, owing to the softness of the ground, one of the side-posts partly gave way, which aroused them all, and torches were lit, and every one busied in trying to prop it up till morning. Whilst thus engaged they heard our voices calling for help. They answered, at the same time getting ready some more torches before, advancing to meet us, as there were several pit-holes between us and them. Their call for us to remain stationary came too late to save me from slipping into one of their pits, thereby spraining my ankle and otherwise hurting myself, besides being buried to my forehead in mud and water. The pit was not quite five feet deep, but, unfortunately for myself in this instance, I belong to the pocket edition of the feminine sex. They soon extricated me from this perilous situation, and carried me to their tents, where, by the assistance of my new friend, I was divested of the mud that still clung to me, and placed into bed.

Before morning the storm, which we all thought had passed over, burst forth with redoubled fury; the flashes of lightning were succeeded by loud peals of thunder, and the rain came splashing down. Their tents were situated on a slight rise, or they would have run great risk of being washed away; every hole was filled with water, and the shea-oak, of whose friendly shelter we had availed ourselves the evening before, was struck by lightning, shivered into a thousand pieces. After a while the storm abated, and the warm sun and a drying wind were quickly removing all traces of it.

Frank and my brother, after an early breakfast, had set out for Eagle Hawk Gully under the guidance of my fair friend's husband, who knew the road thither very well; it was only three miles distant. He was to bring back with him a change of clothing for me, as his wife had persuaded my brother to leave me in her charge until I had quite recovered from the effects of the accident, "which he more readily promised," she observed, "as we are not quite strangers, having met once before."

This awakened my curiosity, and I would not rest satisfied till fully acquainted with the how, when, and where. Subsequently she related to me some portion of the history of her life, which it will be no breach of confidence to repeat here.

Short as it is, however, it is deserving of another chapter.

Chapter IX.

HARRIETTE WALTERS

Harriette Walters had been a wife but twelve months, when the sudden failure of the house in which her husband was a junior partner involved them in irretrievable ruin, and threw them almost penniless upon the world. At this time the commercial advantages of Australia, the opening it afforded for all classes of men, and above all, its immense mineral wealth, were the subject of universal attention. Mr. Walters' friends advised him to emigrate, and the small sum saved from the wreck of their fortune served to defray the expenses of the journey. Harriette, sorely against her wishes, remained behind with an old maiden aunt, until her husband could obtain a home for her in the colonies.

The day of parting arrived; the ship which bore him away disappeared from her sight, and almost heart-broken she returned to the humble residence of her sole remaining relative.

Ere she had recovered from the shock occasioned by her husband's departure, her aged relation died from a sudden attack of illness, and Harriette was left alone to struggle with her poverty and her grief. The whole of her aunt's income had been derived from an annuity, which of course died with her; and her personal property, when sold, realized not much more than sufficient to pay a few debts and the funeral expenses; so that when these last sad duties were performed, Harriette found herself with a few pounds in her pocket, homeless, friendless, and alone.

Her thoughts turned to the distant land, her husband's home, and every hope was centred in the one intense desire to join him there. The means were wanting, she had none from whom she could solicit assistance, but her determination did not fail. She advertized for a situation as companion to an invalid, or nurse to young children, during the voyage to Port Philip, provided her passage-money was paid by her employer. This she soon obtained. The ship was a fast sailer, the winds were favourable, and by a strange chance she arrived in Melbourne three weeks before her husband. This time was a great trial to her. Alone and unprotected in that strange, rough city, without money, without

friends, she felt truly wretched. It was not a place for a female to be without a protector, and she knew it, yet protector she had none; even the family with whom she had come out, had gone many miles up the country. She possessed little money, lodgings and food were at an awful price, and employment for a female, except of a rough sort, was not easily procured.

In this dilemma she took the singular notion into her head of disguising her sex, and thereby avoiding much of the insult and annoyance to which an unprotected female would have been liable. Being of a slight figure, and taking the usual colonial costume--loose trousers, a full, blue serge shirt, fastened round the waist by a leather belt, and a wide-awake--Harriette passed very well for what she assumed to be--a young lad just arrived from England. She immediately obtained a light situation near the wharf, where for about three weeks she worked hard enough at a salary of a pound a week, board, and permission to sleep in an old tumbledown shed beside the store.

At last the long looked-for vessel arrived. That must have been a moment of intense happiness which restored her to her husband's arms--for him not unmingled with surprise; he could not at first recognize her in her new garb. She would hear of no further separation, and when she learnt he had joined a party for the Bendigo diggings, she positively refused to remain in Melbourne, and she retained her boyish dress until their arrival at Bendigo. The party her husband belonged to had two tents, one of which they readily gave up to the married couple, as they were only too glad to have the company and in-door assistance of a sensible, active woman during their spell at the diggings. For the sake of economy, during the time that elapsed before they could commence their journey up, all of them lived in the tents which they pitched on a small rise on the south side of the Yarra. Here it was that our acquaintance first took place; doubtless, my readers will, long ere this, have recognized in the hospitable gentleman I encountered there, my friend's husband, and, in the delicate-looking youth who had so attracted my attention, the fair Harriette herself.

* * * * *

But--REVENONS A NOS MOUTONS.

On the third day of my visit I was pronounced convalescent, and that evening my brother and William came to conduct me back to Eagle Hawk Gully. It was with no little regret that I bade farewell to my new friend, and I must confess that the pleasure of her society had for the time made me quite careless as to the quantity of gold our party might be taking up during my absence. Whilst walking towards our tents, I heard the full particulars of their work, which I subjoin, so as to resume the thread of my DIGGING narrative in a proper manner.

MONDAY.--Much upset by their anxiety occasioned by the non-appearance the previous evening of Frank, my brother, and myself. The two former did not reach home till nearly noon, the roads were so heavy.

After dinner all set to work in better spirits; came to the end of the gold--took out nearly four Pounds weight.

TUESDAY AND WEDNESDAY.--Digging various holes in the vicinity of the lucky spot, but without success. The other party did the same with no better result.

Such were the tidings that I heard after my three days' absence.

THURSDAY.--To-day was spent in prospecting--that is, searching for a spot whose geological formation gives some promise of the precious metal. In the evening, William and Octavius returned with the news that they had found a place at some, distance from the gully, which they thought would prove "paying," as they had washed some of the surface soil, which yielded well. It was arranged that the party be divided into two, and take alternate days to dig there.

FRIDAY.--In pursuance of the foregoing plan William and Octavius set off, carrying a good quantity of dinner and their tools along with them. They worked hard enough during the day, but only brought back three pennyweights of gold-dust with them. My brother and Frank gained a deal more by surface washing at home.

SATURDAY.--Changed hands. Frank and my brother to the new spot, digging. Octavius and William surface washing. There results were much the same as the day before.

SUNDAY, OCTOBER 10--We took advantage of the fine weather to pay a visit to Harriette and her party. We found them in excellent spirits, for at last they had hit upon a rich vein, which had for three days been yielding an average of four pounds weight a day, and was not yet exhausted. I say AT LAST, for I have not before mentioned that they had never obtained more than an ounce of gold altogether, up to the day I left them. We were sincerely pleased with their good fortune. Harriette hoped that soon they might be able to leave this wild sort of life, and purchase a small farm, and once again have a home of their own. This could not be done near Melbourne, so they meant to go to South Australia, where any quantity of land may be bought. In THIS colony no smaller quantity than a square mile--640 acres--is sold by the Government in one lot; consequently, those whose capital is unequal to purchase this, go to some other colony, and there invest the wealth they have acquired in Victoria.

As we had some idea of leaving Eagle Hawk Gully, I bade Harriette farewell. We never expected to meet again. It chanced otherwise; but I must not anticipate.

Monday and Tuesday were most unprofitably passed in digging holes; and on Tuesday night we determined to leave the Eagle Hawk, and try our fortune in some of the neighbouring gullies.

Wednesday was a bustling day. We sold our tent, tools, cradle, &c., as we knew plenty were always to be bought of those who, like ourselves,

were changing their place. Had we known what we were about, we should never have burdened ourselves by bringing so many goods and chattels a hundred and twenty miles or more up the country; but "experience teaches." Having parted with all encumbrances, myself excepted, we started for the Iron Bark Gully. All the gold had been transmitted by the escort to Melbourne, and one fine nugget, weighing nearly five ounces, had been sent to Richard. We could not resist the pleasure of presenting him with it, although by our rules not entitled to any of the proceeds.

The following are the rules by which our affairs were regulated. They were drawn up before leaving Melbourne, and signed by all. Though crude and imperfect, they were sufficient to preserve complete harmony and good fellowship between five young men of different character, taste, and education--a harmony and good fellowship which even Richard's withdrawal did not interrupt.

The rules were these:

1. No one party to be ruler; but every week by turn, one to buy, sell, take charge of gold, and transact all business matters.
2. The gold to be divided, and accounts settled every Saturday night.
3. Any one voluntarily leaving the party, to have one-third of his original share in the expense of purchasing tent and tools returned to him, but to have no further claim upon them or upon the gold that may be found after his withdrawal. Any one dismissed the party for misconduct, to forfeit all claim upon the joint property.
4. The party agree to stand by one another in all danger, difficulty, or illness.
5. Swearing, gambling, and drinking spirits to be strictly avoided.
6. Morning service to be read every Sunday morning.
7. All disputes or appeals from the foregoing rules to be settled by a majority.

Chapter X.

IRONBARK GULLY

I have said little in description of the Eagle Hawk, for all gullies or valleys at the diggings bear a strong external resemblance one to another. This one differed from others only in being much longer and

wider; the sides, as is usually the case in the richest gullies, were not precipitous, but very gradual; a few mountains closed the background. The digging was in many places very shallow, and the soil was sometimes of a clayey description, sometimes very gravelly with slate bottom, sometimes gravelly with pipeclay bottom, sometimes quite sandy; in fact, the earth was of all sorts and depths.

At one time there were eight thousand diggers together in Eagle Hawk Gully. This was some months before we visited it. During the period of our stay at Bendigo there were not more than a thousand, and fewer still in the Iron Bark. The reasons for this apparent desertion were several.

The weather continued wet and uncertain, so that many who had gone down to Melbourne remained there, not yet considering the ground sufficiently recovered from the effects of the prolonged wet season, they had no desire to run the risk of being buried alive in their holes. Many had gone to the Adelaide diggings, of which further particulars hereafter, and many more had gone across the country to the Ovens, or, farther still, to the Sydney diggings themselves. According to digging parlance, "the Turon was looking up," and Bendigo, Mount Alexander, and Forest Creek were thinned accordingly. But perhaps the real cause of their desertion arose from the altered state of the diggings. Some time since one party netted 900 pounds in three weeks; 100 pounds a week was thought nothing wonderful. Four men found one day seventy-five pounds weight; another party took from the foot of a tree gold to the value of 2000 pounds. A friend of mine once met a man whom he knew returning to Melbourne, walking in dusty rags and dirt behind a dray, yet carrying with him 1,500 pounds worth of gold. In Peg Leg Gully, fifty and even eighty pounds weight had been taken from holes only three or four feet deep. At Forest Creek a hole produced sixty pounds weight in one day, and forty more the day after. From one of the golden gullies a party took up the incredible quantity of one hundred and ninety-eight pounds weight in six weeks. These are but two or three instances out of the many that occurred to prove the richness of this truly auriferous spot. The consequence may be easily imagined; thousands flocked to Bendigo. The "lucky bits" were still as numerous, but being disseminated among a greater number of diggers, it followed that there were many more blanks than prizes, and the disappointed multitude were ready to be off to the first new discovery. Small gains were beneath their notice. I have often heard the miners say that they would rather spend their last farthing digging fifty holes, even if they found nothing in them, than "tamely" earn an ounce a day by washing the surface soil; on the same principle, I suppose, that a gambler would throw up a small but certain income to be earned by his own industry, for the uncertain profits of the cue or dice.

For ourselves, we had nothing to complain about. During the short space of time that we had been at Eagle Hawk Gully, we had done as well as one in fifty, and might therefore be classed among the lucky diggers; but "the more people have, the more they want;" and although the many pounds weight of the precious metal that our party had "taken up" gave, when divided, a good round sum a-piece, the avaricious creatures bore

the want of success that followed more unphilosophically than they had done before the rich "pocketful" of gold had made its appearance. They would dig none but shallow holes, and a sort of gambling manner of setting to work replaced the active perseverance they had at first displayed.

Some days before we left, Eagle Hawk Gully had been condemned as a "worthless place," and a change decided on. The when and the where were fixed much in the following manner:

"I say, mates," observed William on the evening of the Sunday on which I had paid my last visit to Harriette, "I say, mates, nice pickings a man got last week in the Iron Bark--only twenty pounds weight out of one hole; that's all."

"Think it's true?" said Octavius, quietly.

"Of course; likely enough. I propose we pack up our traps, and honour this said gully with our presence forthwith."

"Let's inquire first," put in Frank; "it's foolish to change good quarters on such slight grounds."

"Good quarters! slight grounds!" cried William; "what next? what would you have? Good quarters! yes, as far as diggings concerned--whether you find anything for your digging is another matter. Slight grounds, indeed! twenty pounds weight in one day! Yes, we ought to inquire; you're right there, old boy, and the proper place to commence our inquiries is at the gully itself. Let's be off tomorrow."

"Wait two days longer," said Octavius "and I am agreeable."

And this, after a little chaffing between the impatient William and his more business-like comrades, was satisfactorily arranged.

Behold us then, on Wednesday the 13th, after having sold all our goods that were saleable, making our way to the Iron Bark Gully. William enacted the part of auctioneer, which he did in a manner most satisfactory to himself, and amusing to his audience; but the things sold very badly, so many were doing the same. The tents fetched only a few shillings each, and the tools, cradles, &c., EN MASSE, were knocked down for half a sovereign.

The morning was rather cloudy, which made our pedestrian mode of travelling not so fatiguing as it might have been, had the sun in true colonial strength been shining upon us. This was very fortunately not the case, for we more than once mistook our way, and made a long walk out of a short one--quite a work of supererogation--for the roads were heavy and tiring enough without adding an extra quantity of them.

We passed in the close neighbourhood of Sailor's, Californian, American, Long, and Piccaninny Gullies before reaching our destination. Most of these gullies are considered ransacked, but a very fair amount

of gold-dust may be obtained in either by the new comer by tin-dish fossicking in deserted holes. These deserted gullies, as they are called, contained in each no trifling population, and looked full enough for comfortable working. What must they have resembled the summer previous, when some hundreds of people leaving a flat or gully was but as a handful of sand from the sea-shore!

Before evening we arrived at the Iron Bark. This gully takes its name from the splendid trees with which it abounds; and their immense height, their fluted trunks and massive branches gave them a most majestic appearance. We paused beneath one in a more secluded part, and there determined to fix our quarters for the night. The heavy "swags" were flung upon the ground, and the construction of something resembling a tent gave them plenty to do; the tomahawks, which they carried in their belts, were put into immediate requisition, and some branches of the trees were soon formed into rough tent-poles. The tent, however, though perhaps as good as could be expected, was nothing very wonderful after all, being made only of some of the blankets which our party had brought in their swags. Beneath it I reposed very comfortably; and, thanks to my fatiguing walk, slept as soundly as I could possibly have done beneath the roof of a palace. The four gentlemen wrapped themselves in their blankets, and laid down to rest upon the ground beside the fire; their only shelter was the foliage of the friendly tree which spread its branches high above our heads.

Next morning William was for settling ourselves in the gully. He wanted tents, tools, &c., purchased, but by dint of much talking and reasoning, we persuaded him first to look well about, and judge from the success of others whether we were likely to do any good by stopping there. We soon heard the history of the "twenty-pound weight" story. As Frank and Octavius had at once surmised, it originated in a party who were desirous to sell their claims and baggage before starting for Melbourne. I believe they succeeded--there are always plenty of "new chums" to be caught and taken in--and the report had caused a slight rush of diggers, old and new, to the gully. Many of these diggers had again departed, others stayed to give the place a trial; we were not among the latter. The statements of those who were still working were anything but satisfactory, and we were all inclined to push on to Forest Creek.

Meanwhile, it is Thursday afternoon. All but Frank appear disposed for a siesta; he alone seems determined on a walk. I offer myself and am accepted as a companion, and off we go together to explore this new locality.

We proceeded up the gully. Deserted holes there were in numbers, many a great depth, and must have cost a vast amount of manual labour. In some places the diggers were hard at work, and the blows of the pick, the splash of water, and the rocking of the cradle made the diggings seem themselves again. There were several women about, who appeared to take as active an interest in the work as their "better halves." They may often be seen cradling with an infant in their arms. A man and a cart

preceeded us up the gully. Every now and again he shouted out in a stentorian voice that made the welkin ring; and the burden of his cry was this:

"Ere's happles, happles, Vandemonian happles, and them as dislikes the hiland needn't heat them."

The admirers of the fertile island must have been very numerous, for his customers soon made his pippins disappear.

We passed a butcher's shop, or rather tent, which formed a curious spectacle. The animals, cut into halves or quarters, were hung round; no small joints there--half a sheep or none; heads, feet, and skins were lying about for any one to have for the trouble of picking up, and a quantity of goods of all sorts and sizes, gridirons, saucepans, cradles, empty tea-chests, were lying scattered around in all directions ticketed "for sale." We quickly went on, for it was not a particularly pleasant sight, and at some distance perceived a quiet little nook rather out of the road, in which was one solitary tent. We hastened our steps, and advanced nearer, when we perceived that the tent was made of a large blanket suspended over a rope, which was tied from one tree to another. The blanket was fastened into the ground by large wooden pegs. Near to the opening of the tent, upon a piece of rock, sat a little girl of about ten years old. By her side was a quantity of the coarse green gauze of which the diggers' veils are made. She was working at this so industriously, and her little head was bent so fixedly over her fingers that she did not notice our approach. We stood for some minutes silently watching her, till Frank, wishing to see more of her countenance, clapped his hands noisily together for the purpose of rousing her.

She started, and looked up. What a volume of sorrow and of suffering did those pale features speak!

Suddenly a look of pleasure flashed over her countenance. She sprang from her seat, and advancing towards Frank, exclaimed:

"Maybe you'll be wanting a veil, Sir. I've plenty nice ones, stronger, better, and cheaper than you'll get at the store. Summer dust's coming, Sir. You'll want one, won't you? I havn't sold one this week," she added, almost imploringly, perceiving what she fancied a "no-customer" look in his face.

"I'll have one, little girl," he answered in a kindly tone, "and what price is it to be?"

"Eighteen pence, Sir, if you'd please be so good."

Frank put the money into her hand, but returned the veil. This action seemed not quite to satisfy her; either she did not comprehend what he meant, or it hurt her self-pride, for she said quickly:

"I havn't only green veils--p'raps you'd like some candles better--I

makes them too."

"YOU make them?" said Frank, laughing as he glanced at the little hands that were still holding the veil for his acceptance. "YOU make them? Your mother makes the candles, you mean."

"I have no mother now," said she, with an expression of real melancholy in her countenance and voice. "I makes the candles and the veils, and the diggers they buys them of me, cos grandfather's ill, and got nobody to work for him but me."

"Where do you and your grandfather live?" I asked. "In there?" pointing to the blanket tent.

She nodded her head, adding in a lower tone:

"He's asleep now. He sleeps more than he did. He's killed hisself digging for the gold, and he never got none, and he says 'he'll dig till he dies.'"

"Dig till he dies." Fit motto of many a disappointed gold-seeker, the finale of many a broken up, desolated home, the last dying words of many a husband, far away from wife or kindred, with no loved ones near to soothe his departing moments--no better burial--place than the very hole, perchance, in which his last earthly labours were spent. These were some of the thoughts that rapidly chased one another in my mind as the sad words and still sadder tone fell upon my ear.

I was roused by hearing Frank's voice in inquiry as to how she made her candles, and she answered all our questions with a child-like NAIVETE, peculiarly her own. She told us how she boiled down the fat--how once it had caught fire and burnt her severely, and there was the scar still showing on her brown little arm--then how she poured the hot fat into, the tin mould, first fastening in the wicks, then shut up the mould and left it to grow cold as quickly as it would; all this, and many other particulars which I have long since forgotten, she told us; and little by little we learnt too her own history.

Father, mother, grandfather, and herself had all come to the diggings the summer before. Her father met with a severe accident in digging, and returned to Melbourne. He returned only to die, and his wife soon followed him to the grave. Having no other friend or relative in the colonies, the child had been left with her aged grandfather, who appeared as infatuated with the gold-fields as a more hale and younger man. His strength and health were rapidly failing, yet he still dug on. "We shall be rich, and Jessie a fine lady before I die," was ever his promise to her, and that at times when they were almost wanting food.

It was with no idle curiosity that we listened to her; none could help feeling deeply interested in the energetic, unselfish, orphan girl. She was not beautiful, nor was she fair--she had none of those childish graces which usually attract so much attention to children of her age; her eyes were heavy and bloodshot (with work, weeping, cold, and

hunger) except when she spoke of her sick grandfather, and then they disclosed a world of tenderness; her hair hung matted round her head; her cheek was wan and sallow; her dress was ill-made and threadbare; yet even thus, few that had once looked at her but would wish to look again. There was an indescribable sweetness about the mouth; the voice was low and musical; the well-shaped head was firmly set upon her shoulders; a fine open forehead surmounted those drooping eyes; there was almost a dash of independence; a "little woman" manner about her that made one imperceptibly forget how young she was in years.

A slight noise in the tent--a gentle moan.

"He's waked; I must go to him, and," in a lower, almost a deprecating tone, "he doesn't like to hear stranger folks about."

We cheerfully complied with the hint and departed, Frank first putting some money into her hand, and promising to call again for the candles and veils she seemed quite anxious we should take in return.

Our thoughts were as busy as our tongues were silent, during the time that elapsed before we reached home. When we entered, we found a discussion going on, and words were running high. My brother and Octavius were for going somewhere to work, not idle about as they were doing now; William wanted to go for a "pleasure trip" to Forest Creek, and then return to Melbourne for a change. Frank listened to it all for some minutes, and then made a speech, the longest I ever heard from him, of which I will repeat portions, as it will explain our future movements.

"This morning, when going down the gully, I met the person whom we bought the dray-horses of in Melbourne. I asked him how he was doing, and he answered, 'badly enough; but a friend's just received accounts of some new diggings out Albury way, and there I mean to go.' He showed me also a letter he had received from a party in Melbourne, who were going there. From these accounts, gold is very plentiful at this spot, and I for one think we may as well try our fortune in this new place, as anywhere else. The route is partly along the Sydney road, which is good, but it is altogether a journey of two hundred miles. I would therefore propose (turning to my brother), that we proceed first to Melbourne, where you can leave your sister, and we can then start for the Ovens; and as provisions are at an exorbitant price there, we might risk a little money in taking up a dray-full of goods as before. And as we may never chance to be in this part of Victoria again, I vote that we take William's 'pleasure trip' to Forest Creek, stop there a few days, and then to Melbourne."

This plan was adopted.

FRIDAY MORNING.--Frank stole out early after breakfast, for a visit to little Jessie. I learnt the full particulars afterwards, and therefore will relate them as they occurred, as though myself present. He did not find her sitting outside the tent as before, and hesitated whether to

remain or go away, when a low moaning inside determined him to enter. He pushed aside the blanket, and saw her lying upon an old mattress on the ground; beside her was a dark object, which he could not at first distinguish plainly. It was her grandfather, and he was dead. The moaning came from the living orphan, and piteous it was to hear her. It took Frank but a few minutes to ascertain all this, and then he gently let down the blanket, and hastened to the butcher's shop I have already mentioned. He learnt all that there was to know: that she had no friends, no relatives, and that nothing but her own labour, and the kindness of others, had kept them from starvation through the winter. Frank left a small sum in the butcher's hands, to have the old man buried, as best could be, in so wild and unnatural a place, and then returned to the mourning child. When he looked in, she was lying silent and senseless beside the corpse. A gentle breathing--a slight heaving of the chest, was all that distinguished the living from the dead. Carefully taking her in his arms, he carried her to our tent. As I saw him thus approaching, an idea of the truth flashed across me. Frank brought her inside, and laid her upon the ground--the only resting-place we had for her. She soon opened her eyes, the quick transition through the air had assisted in reviving her, and then I could tell that the whole sad truth returned fresh to her recollection. She sat up, resting her head upon her open hands, whilst her eyes were fixed sullenly, almost doggedly, upon the ground. Our attempts at consolation seemed useless. Frank and I glanced at one another. "Tell us how it happened," said he gently.

Jessie made no answer. She seemed like one who heard not.

"It must have been through some great carelessness--some neglect," pursued Frank, laying a strong emphasis on the last word.

This effectually roused her.

"I NEVER left him--I NEVER neglected him. When I waked in the morning I thought him asleep. I made my fire. I crept softly about to make his gruel for breakfast, and I took it him, and found him dead--dead," and she burst into a passion of tears.

Frank's pretended insinuation had done her good; and now that her grief found its natural vent, her mind became calmer, and exhausted with sorrow, she fell into a soothing slumber.

We had prepared to start before noon, but this incident delayed us a little. When Jessie awoke, she seemed to feel intuitively that Frank was her best friend, for she kept beside him during our hasty dinner, and retained his hand during the walk. There was a pleasant breeze, and we did not feel over fatigued when, after having walked about eight miles, we sat down beneath a most magnificent gum tree, more than a hundred feet high. Frank very wisely made Jessie bestir herself, and assist in our preparations. She collected dry sticks for a fire, went with him to a small creek near for a supply of water; and so well did he succeed, that for a while she nearly forgot her troubles, and could almost smile at some of William's gay sallies.

Next morning, very early, breakfast rapidly disappeared, and we were marching onwards. An empty cart, drawn by a stout horse, passed us.

Frank glanced at the pale little child beside him. "Where to?" cried he.

"Forest Creek."

"Take us for what?"

"A canary a-piece."

"Agreed." And we gladly sprung in. For the sake of the uninitiated, I must explain that, in digger's slang, a "canary" and half-a-sovereign are synonymous.

We passed the "Porcupine Inn." We halted at noon, dined, and about two hours after sighted the Commissioners' tent. In a few minutes the cart stopped.

"Can't take yer not no further. If the master seed yer, I'd cotch it for taking yer at all."

We paid him and alighted.

Chapter XI.

FOREST CREEK

In my last chapter we were left standing not far from the Commissioners' tent, Forest Creek, at about three o'clock in the afternoon of Saturday, the 16th. An air of quiet prevailed, and made the scene unlike any other we had as yet viewed at the diggings. It was the middle of the month; here and there a stray applicant for a licence might make his appearance, but the body of the diggers had done so long before, and were disseminated over the creek digging, washing, or cradling, as the case might be, but here at least was quiet. To the right of the Licensing Commissioners' tent was a large one appropriated to receiving the gold to be forwarded to Melbourne by the Government escort. There were a number of police and pensioners about.

Not many months ago, the scarcity of these at the diggings had prevented the better class of diggers from carrying on their operations with any degree of comfort, or feeling that their lives and property were secure. But this was now altered; large bodies of police were placed on duty, and wooden buildings erected in various parts of the

diggings for their accommodation. Assistant Commissioners (who were also magistrates) had been appointed, and large bodies of pensioners enrolled as police, and acting under their orders. Roads were also being made in all directions, thereby greatly facilitating intercommunication.

But I must not forget that we are standing looking about us without exactly knowing where to turn. Suddenly William started off like a shot in pursuit of a man a little way from us. We could not at first guess who it was, for in the diggers' dress all men look like so many brothers; but as we approached nearer we recognised our late captain, Gregory.

"Well, old fellow, and where did you spring from?" was Frank's salutation. "I thought you were stuck fast in the Eagle Hawk."

"I may say the same," said Gregory, smiling. "How got you here?"

This was soon told, and our present dilemma was not left unmentioned.

"A friend in need is a friend indeed," says the proverb, and William echoed it, as Gregory very complaisantly informed us that, having just entered upon a store not far distant, he would be delighted to give us a shelter for a few nights. This we gladly accepted, and were soon comfortably domiciled beneath a bark and canvas tent adjoining his store. Here we supped, after which Gregory left us, and returned with mattresses, blankets, &c., which he placed on the ground, whilst he coolly ordered the gentlemen to prepare to take their departure, he himself presently setting them the example.

"I'm certain sure the young leddy's tired," said he; "and that little lassie there (pointing to Jessie) looks as pale and as wizened as an old woman of seventy--the sooner they gets to sleep the better."

We followed the kindly hint, and Jessie and myself were soon fast asleep in spite of the din close beside us. It was Saturday night, and the store was full; but the Babel-like sounds disturbed us not, and we neither of us woke till morning.

It was Sunday. The day was fine, and we strolled here and there, wandering a good way from Gregory's store. As we returned, we passed near the scene of the monster meeting of 1851. The following account of it is so correct, that I cannot do better than transcribe it.

"The exceeding richness of the Mount Alexander diggings, and extraordinary success of many of the miners, led the Government to issue a proclamation, raising the licence from thirty shillings to three pounds. As soon as these intentions became known, a public meeting of all the miners was convened, and took place on the 15th of December, 1851. This resolve of the Governor and Executive Council was injudicious, since, in New South Wales, the Government proposed to reduce the fee to 15s.; and among the miners in Victoria, dissatisfaction was rife, on account of the apparent disregard by the

Government of the wants and wishes of the people engaged in the gold diggings, and because of the absence of all police protection, while there appeared to be no effort made to remedy this defect. Indignation was, therefore, unequivocally expressed at the several diggings' meetings which were held, and at which it was resolved to hold a monster meeting. The 'Old Shepherd's Hut,' an out station of Dr. Barker's, and very near the Commissioners' tent, was the scene chosen for this display. For miles around work ceased, cradles were hushed, and, the diggers, anxious to show their determination, assembled in crowds, swarming from every creek, gully, hill, and dale, even from the distant Bendigo, twenty miles away. They felt that if they tamely allowed the Government to charge 3 pounds one month, the licensing fee might be increased to 6 pounds the next; and by such a system of oppression, the diggers' vocation would be suspended.

"It has been computed that from fifteen to twenty thousand persons were on the ground during the time of the meeting. Hundreds, who came and heard, gave place to the coming multitude, satisfied with having attended to countenance the proceedings. The meeting ultimately dispersed quietly, thereby disappointing the anticipations of those who expected, perhaps even desired, a turbulent termination. The majority determined to resist any attempt to enforce this measure, and to pay NOTHING; but, happily, they were not reduced to this extremity, since his Excellency wisely gave notice that no change would be made in the amount demanded for licence."

The trees up which the diggers had climbed during the meeting are still pointed out.

The "Old Shepherd's Hut" was standing. It seemed a most commodious little building compared to the insecure shelter of a digger's tent. The sides of the hut were formed of slabs, which were made mostly from the stringy bark,--a tree that splits easily--the roof was composed of the bark from the same tree; the chimney was of stones mortared together with mud. This is the general style of building for shepherds' huts in the bush. As we passed it I could not but mentally contrast the scene that took place there on the important day of the monster meeting, to the deep tranquillity that must have reigned around the spot for centuries before the discovery of gold drew multitudes to the place.

The trees in this neighbourhood are mostly stringy bark; almost all are peeled of their covering, as many diggers, particularly those who have their families with them, keep much to one part, and think it, therefore, no waste of time or labour to erect a hut, instead of living in a comfortless tent.

On Monday morning we determined to pursue our travels, and meant that day to pay a flying visit to Fryer's Creek. It was a lovely morning, and we set out in high spirits. A heavy rain during the night had well laid the dust. On our way we took a peep at several flats and gullies, many of which looked very picturesque, particularly one called Specimen Gully, which was but thinly inhabited.

We had hardly reached Fryer's Creek itself when we saw a vast concourse of people gathered together. Frank and my brother remained with me at a little distance, whilst Octavius and William went to learn the occasion of this commotion. It arose from an awful accident which had just occurred.

Three brothers were working in a claim beside the stream, some way apart from the other diggers. The heavy rain during the night had raised the water, and the ground between the hole where they were working and the Creek, had given way imperceptibly UNDERNEATH. One brother, who was early in the hole at work, fancied that the water at the bottom was gradually rising above his knees; he shouted to his comrades, but unfortunately they had gone, one, one way, one, another, in quest of something, and it was some minutes ere they returned.

Meanwhile the water in the hole was slowly but surely rising, and the slippery sides which were several feet high defied him to extricate himself. His cries for help became louder--he was heard, and his brothers and some neighbours hastened to his assistance. Ropes were procured after some further delay, and thrown to the unhappy man--but it was too late. None dared approach very near, for the ground was like a bog, and might at any moment give way beneath their feet; the water was nearly level with the top of the hole, and all hope of saving him was gone. The brothers had often been warned of the danger they were running.

Shuddering at the thoughts of this awful death we turned away, but no change of scene could dissipate it from our minds--the remembrance of it haunted me for many a night.

Jessie seemed pleased to see us on our return--we had left her behind with Gregory to his great delight--we abstained from mentioning before her the fearful accident we had but witnessed.

That evening we wandered about Forest Creek. We had not gone far before a digger with a pistol in his hand shot by us; he was followed by an immense mob, hooting, yelling, and screaming, as only a mob at the diggings can. It was in full pursuit, and we turned aside only in time to prevent ourselves from being knocked down in the confusion.

"Stop him--stop him," was the cry. He was captured, and the cry changed to, "String him up--string him up--it's useless taking him to the police-office."

"What has he done?" asked my brother of a quiet by-stander.

"Shot a man in a quarrel at a grogshop."

"String him up--string him up--confront him with the body," vociferated the mob.

At this moment the firmly-secured and well-guarded culprit passed by, to

be confronted with the dead body of his adversary. No sooner did he come into his presence than the CI-DEVANT corpse found his feet, "showed fight," and roared out, "Come on," with a most unghostlike vehemence. The fury of the mob cooled down; the people thought the man had been murdered, whereas the shot, fortunately for both, had glanced over the forehead without doing any serious injury. Taking advantage of this lull, the fugitive declared that the wounded man had been robbing him. This turned the tables, and, inspired by the hootings of the now indignant mob, the "dead man" took to his heels and disappeared.

The diggers in Pennyweight Flat, Nicholson's Gully, Lever Flat, Dirty Dick's Gully, Gibson's Flat, at the mouth of Dingley Dell, and in Dingley Dell itself, were tolerably contented with their gains, although in many instances, the parties who were digging in the centre of the gullies, or what is called "the slip," experienced considerable trouble in bailing the water out of their holes.

Some of the names given to the spots about Forest Creek are anything but euphonious. Dingley Dell is, however, an exception, and sounds quite musical compared to Dirty Dick's Gully. The former name was given to the place by a gentleman from Adelaide, and was suggested by the perpetual tinkling of the bullock's bells, it being a favourite camping place for bullock drivers, offering, as it did, an excellent supply of both wood, water, and food for their cattle. From whom the latter inelegant name originated I cannot precisely tell--but there are plenty of "dirty Dicks" all over the diggings.

The current prices of this date at Forest Creek were as follows: flour, 9 to 10 pounds per hundred-weight; sugar, 1s. 6d. a pound, very scarce; tea, 3s.; rice, 1s.; coffee, 3s.; tobacco, 8s.; cheese, 3s.; butter, 4s.; honey, 3s. 6d.; candles, 1s. 6d.; currants, 1s. 6d., very scarce; raisins, 1s. 6d.; figs, 2s. 6d.; salt, 1s. 6d. Picks, spades, and tin dishes, 10s. each. Gold 64s. per ounce.

TUESDAY, 19.--Before breakfast we were busily employed in packing the "swags" when Octavius suddenly dropped the strap he held in his hand for that purpose, and darted into the store. Thinking that we had omitted something which he went to fetch, we continued our work. When everything was ready and the last strap in its place, we again thought of our absent comrade, making all sorts of surmises regarding his disappearance, when, just as Frank was going after him, in he walked, accompanied by a stranger whom he introduced as his uncle. This surprised us, as we were ignorant of his having any relatives in the colonies. He then explained that a younger brother of his father's had about eight years ago gone to South Australia, and that never having heard of him for some years they had mourned him as dead. After many adventures he had taken a fancy to the diggings, and had just come from Melbourne with a dray full of goods. He went to Gregory's store to dispose of them. Octavius had heard them in conversation together, and had mistaken his uncle's for his father's voice. Hence the precipitation of his exit. The uncle was a tall sunburnt man, who looked well-inured to hardship and fatigue. He stayed and took breakfast with us, and then having satisfactorily arranged his business

with Gregory, and emptied his dray, he obligingly offered to convey Jessie and myself to Melbourne in it. Accordingly after dinner we all started together.

Our new companion was a most agreeable person, and his knowledge of the colonies was extensive. With anecdotes of the bush, the mines, and the town, he made the journey pass most pleasantly. Before evening we reached the Golden Point near Mount Alexander. This term of "Golden" has been applied to a great many spots where the deposits have been richer than, usual. There was a Golden Point at Ballarat, and when the report of the Alexander diggings drew the people from there, they carried the name with them, and applied it to this portion of the mount. To the left of the Point, which was still full of labourers, was the store of Mr. Black, with the Union-Jack flying above it. It is a most noted store, and at one time when certain delicacies were not to be had in Melbourne they were comparatively cheap here.

We passed by this busy spot and encamped at sunset at the foot of Mount Alexander. It was a lovely evening and our eyes were feasted by a Most glorious sight. All the trees of the forest gradually faded away in the darkness, but beyond them, and through them were glimpses of the granite-like walls of the mount, brilliantly shining in and reflecting the last glowing rays of the setting sun. Some of the gorgeous scenes of fairy-land seemed before us--we could have imagined that we were approaching by night some illuminated, some enchanted castle.

That evening we sat late round our fire listening to the history which the uncle of Octavius related of some of his adventures in South Australia. The posts he had filled formed a curious medley of occupations, and I almost forget the routine in which they followed one another, but I will endeavour to relate his story as much as possible in his own words.

"When I started from England, after having paid passage-money, &c., I found myself with about 200 pounds ready money in my purse--it was all I had to expect, and I determined to be very careful of it; but by a young man of five-and-twenty these resolutions, like lady's promises, are made to be broken. When I landed in Adelaide with my money in my pocket--minus a few pounds I had lost at whist and cribbage on board ship--I made my way to the best inn, where I stayed some days, and ran up rather a longish bill. Then I wanted to see the country, which I found impossible without a horse, so bought one, and rode about to the various stations, where I was generally hospitably received, and thus passed a few months very pleasantly, only my purse was running low. I sold the horse, then my watch, and spent the money. When that was gone, I thought of the letters of introduction I possessed. The first that came to hand was directed to a Wesleyan minister. I called there, looking as sanctimonious as I could. He heard my story, advised me to go to chapel regularly, 'And for your temporal wants,' said he, 'the Lord will provide.' I thanked him, and bowed myself off.

"My first act was to burn my packet of introductory letters, my next was to engage myself to a stock-holder at 15s. a week and my

rations. He was going up to his station at once, and I accompanied him. We travelled for about two hundred miles through a most beautiful country before we reached his home. His house was, in my ideas, a comical-looking affair--made of split logs of wood, with a bark roof, and a barrel stuck on the top of the roof at one end by way of a chimney-pot. His wife, a pale sickly little woman, seemed pleased to see us, for she had been much alarmed by the natives, who were rather numerous about the neighbourhood. There was only a young lad, and an old shepherd and his wife upon the station, besides herself. Before I had been there six weeks she died, and her new-born little baby died too; there was not a doctor for miles, and the shepherd's wife was worse than useless. I believe this often happens in the bush--it's not a place for woman-folks.

"I was here eighteen months--it was a wild sort of life, and just suited my fancy; but when I found I had some money to receive, I thought a spree in town would be a nice change, so off I marched. My spree lasted as long as my money, and then I went as barman to a public-house at Clare, some way up the country--here I got better wages and better board, and stopped about half-a-year. Then I turned brewer's drayman, and delivered casks of good Australian ale about Adelaide for 30s. a week. The brewer failed, and I joined in a speculation with an apple dealer to cart a lot up to the Kapunda copper mines. That paid well. I stopped up there as overseer over four-and-twenty bullock-drays. Well, winter came, and I had little to do, though I drew my 30s. a week regularly enough, when the directors wanted a contract for putting the small copper-dust into bags, and sewing them up. I offered to do the job at 2d. a bag, and could get through a hundred and fifty a day. How much is that? Oh! 12s. 6d. a-piece. I forgot to tell you I'd a mate at the work. That was good earnings in those days; and me and my mate, who was quite a lad, were making a pretty penny, when some others offered to do them a halfpenny a bag cheaper. I did the same, and we kept it to ourselves for about four weeks longer, when a penny a bag was offered. There was competition for you! This roused my bile--I threw it up altogether--and off to Adelaide again. Soon spent all my cash, and went into a ship-chandler's office till they failed; then was clerk to a butcher, and lost my situation for throwing a quarter of his own mutton at him in a rage; and then I again turned brewer's man. Whilst there I heard of the diggings--left the brewer and his casks to look after themselves, and off on foot to Ballarat.

"Here I found the holes averaging some thirty feet--which was a style of hard work I didn't quite admire; so hearing of the greater facility of the Alexander diggings, I went through Bully Rook Forest, and tried my luck in the Jim Crow Ranges. This paid well; and I bought a dray, and bring up goods to the stores, which I find easier work, and twice as profitable as digging. There's my story; and little I thought when I went into Gregory's store to-day, that I should find my curly-pated nephew ready to hear it."

Next day we travelled on, and halted near Saw-pit Gully; it was early in the afternoon, and we took a walk about this most interesting

locality. The earth was torn up everywhere--a few lucky hits had sufficed to re-collect a good many diggers there, and they were working vigorously. At dusk the labour ceased--the men returned to their tents, and for the last time our ears were assailed by the diggers' usual serenade. Imagine some hundreds of revolvers almost instantaneously fired--the sound reverberating through the mighty forests, and echoed far and near--again and again till the last faint echo died away in the distance. Then a hundred blazing fires burst upon the sight--around them gathered the rough miners themselves--their sun-burnt, hair-covered faces illumined by the ruddy glare. Wild songs, and still wilder bursts of laughter are heard; gradually the flames sink and disappear, and an oppressive stillness follows (sleep rarely refuses to visit the diggers' lowly couch), broken only by some midnight carouser, as he vainly endeavours to find his tent. No fear of a "peeler" taking him off to a police-station, or of being brought before a magistrate next morning, and "fined five shillings for being drunk."

Early on Tuesday morning I gave a parting look to the diggings--our dray went slowly onwards--a slight turn in the road, and the last tent has vanished from my sight. "Never," thought I, "shall I look on such a scene again!"

Chapter XII.

RETURN TO MELBOURNE

Before the evening of Wednesday the 20th, we passed through Kyneton, and found ourselves in the little village of Carlshue, where we passed the night. Here is a police-station, a blacksmith's, a few stores and some cottages, in one of which we obtained a comfortable supper and beds. A lovely view greeted us at sunrise. Behind us were still towering the lofty ranges of Mount Alexander, before us was Mount Macedon and the Black Forest. This mountain, which forms one of what is called the Macedon range, is to be seen many miles distant, and on a clear, sunny day, the purple sides of Mount Macedon, which stands aloof as it were, from the range itself, are distinctly visible from the flag-staff at Melbourne.

We had intended to have stopped for the night in Kyneton, but the charges there were so enormous that we preferred pushing on and taking our chance as to the accommodation Carlshue could afford, nor did we repent the so doing.

The following are the Kyneton prices. A meal or bed--both bad--4s; a night's stabling, one pound ten shillings per horse; hay at the rate of 9d. a pound; this is the most exorbitant charge of all.

Hay was somewhere about 20 pounds a ton in Melbourne. The carriage of it to Kyneton, now that the fine weather was setting in, would not exceed 8 pounds a ton at the outside, which would come to 28 pounds. The purchaser, by selling it at Kyneton at the rate of 9d. a pound, or 75 pounds per ton, cleared a profit of 47 pounds--NOT QUITE 200 PER CENT. If THIS is not fortune-making, I should like to know what is. It beats the diggings hollow.

Next morning we looked our last at "sweet Carlshrue," and having crossed the Five Mile Creek, camped for our mid-day meal beside the Black Forest. Here a slight discussion arose, as to whether it would be more advisable to proceed on our journey and camp in the Black Forest that night, or whether we should remain where we were outside, and recommence our journey in good time the next morning so as to get through this most uncomfortable portion of our travels in one day. Frank and Octavius were for the latter plan, as the best and safest, but the rest (thinking that, having once travelled through it without encountering any thing resembling a bushranger, they might safely do so again) protested against wasting time, and were for entering those dark shades without further delay. The uncle of Octavius whom, in future, for the sake of convenience, I shall call Mr. L----, was also of this mind, and as he was in some sort our leader during the journey, his advice decided the matter. Danger to him was only a necessary excitement. He was naturally fearless, and his merry laugh and gay joke at the expense of the bushranger fearing party gradually dissipated the unaccountable presentiment of danger which I for one had in no small degree experienced.

On we went, up hill and down dale, sometimes coming to a more open piece of ground, but more generally threading our way amid a very maze of trees, with trunks all black as the ground itself, whilst the dingy foliage and the few rays of sunshine that lit up those dark, deep glades served only to heighten the gloominess around.

After walking for about six miles--I preferred that mode of getting along to the joltings of the dray--we all felt disposed to rest ourselves. We selected a spot where the trees were less thickly clustered, and taking the horses out of the dray, tethered them by strong ropes to some trees near. The dray itself was turned up, and a blanket thrown over the up-raised shafts formed a most complete and cosy little tent.

A fire was next kindled, and a kettle full of water (with the tea in it!) was placed on to boil, some home-made bread, brought from Carlshrue, was placed upon the ground, and some chops were toasted on the ends of sticks, which are usually the impromptu toasting-forks of the bush. The old tin plates and pannicans, not quite so bright as once upon a time, but showing, despite sundry bruises and scratches, that they had seen better days, were placed upon the tea-table, which of course was the ground. Two or three knives and forks were on general service, and wandered about from hand to hand as occasion required. Altogether it was a merry, sociable party, and I

think I enjoyed that supper better than any I ever tasted before or since.

"CHACUN A SON GOUT," many a one will say.

The pleasantest moments must come to an end, and so did these. After having sat up later than usual, Jessie and I retired to our gipsy tent, leaving our guardian diggers smoking round the fire. They meant to keep watches during the night to prevent a surprise.

FRIDAY.--We were comfortably seated at our breakfast, discussing a hundred subjects besides the food before us, when a shrill "coo-ey" burst through the air; "coo-ey"--"coo-ey" again and again, till the very trees seemed to echo back the sound. We started to our feet, and, as if wondering what would come next, looked blankly at each other, and again the "coo-ey," more energetic still, rang in our ears.

This is the call of the bush, it requires some little skill and practice, and when given well can be heard a great way off. In such a place as the Black Forest it could only proceed from some one who had lost their way, or be a signal of distress from some party in absolute danger. We again looked from one to the other--it bewildered us; and again the cry, only more plaintive than before, came to us.

Simultaneously they seized their pistols, and started in the direction whence the sounds proceeded. They were all too true Englishmen to hear a fellow-creature in peril and not hasten to their succour.

Jessie and myself could not remain behind alone--it was impossible; we followed at a little distance, just keeping our comrades in sight. At last they came to a halt, not knowing where to turn, and we joined them. Frank gave a "coo-ey," and in about the space of a minute the words "help, help,--come, come," in scarcely, audible sounds, answered to the call. We penetrated about thirty yards farther, and a few low groans directed us to a spot more obscure, if possible, than the rest. There, firmly bound to two trees close together, were two men. A thick cord was passed round and round their bodies, arms, and legs, so as to leave no limb at liberty. They seemed faint and exhausted at having called so long for help.

It was the work of a moment for our party to fling down their pistols, take out knives and tomahawks, and commence the work of releasing them from their bonds. But the cords were knotted and thick, and there seemed no little labour in accomplishing it. They were also retarded by the small quantity of light, for, as I said before, it was a dark and secluded spot. At length one man was released, and so faint and exhausted was he, from the effects of whatever ill-usage he had suffered, that, being a tall, powerfully made man, it required the united strength of both Frank and Mr. L---- to prevent his falling to the ground.

Jessie and myself were standing a little apart in the shade; we seemed as if spell-bound by the incident, and incapable of rendering any assistance.

The second was soon set at liberty, and no sooner did he feel his hands and feet free from the cords than he gave a loud, shrill "coo-ey."

A shriek burst from Jessie's lips as, immediately the cry was uttered, and before any one could, recover from the bewilderment it occasioned, four well-armed men sprang upon our startled party.

Taken thus at disadvantage, unarmed, their very knives flung down in their eagerness to untwist the cords, they were soon overpowered. The wretch who had been reclining in Frank's arms quickly found his feet, and, ere Frank could recover from his surprise, one heavy blow flung him to the ground; whilst the other twined his powerful arms round Mr. L----, and, after a short but sharp struggle, in which he was assisted by a fellow-villain, succeeded in mastering him.

It was a fearful sight, and I can hardly describe my feelings as I witnessed it. My brain seemed on fire, the trees appeared to reel around me, when a cold touch acted as a sudden restorative, and almost forced a scream from my lips. It was Jessie's hand, cold as marble, touching mine. We spoke together in a low whisper, and both seemed inspired by the same thoughts, the same hope.

"I saw a little hill as we came here," said Jessie; "let's try and find it and look out for help."

I instinctively followed her, and stealthily creeping along, we gained a small rise of ground which commanded a more extended view than most places in the Black Forest, and, but for the thickness of the trees, we could have seen our own camping-place and the part where the ambuscade had been laid. From sounds of the voices, we could tell that the ruffians were leading their prisoners to the spot where we had passed the night, and the most fearful oaths and imprecations could ever and anon be heard. Well might our hearts beat with apprehension, for it was known that when disappointed in obtaining the gold they expected, they vented their rage in torturing their unfortunate victims.

Meanwhile Jessie seemed listening intently. The time she had spent in the bush and at the diggings had wonderfully refined her sense of hearing. Suddenly she gave a shrill "coo-ey." The moment after a shot was fired in the direction of our late camp. Jessie turned even paler, but recovering herself, "coo-ey" after "coo-ey" made the echoes ring. I joined my feeble, efforts to hers; but she was evidently well used to this peculiar call. On a fine still day, this cry will reach for full three miles, and we counted upon this fact for obtaining some assistance.

"Help is coming," said Jessie, in a low voice, and once more with increasing strength she gave the call.

Footsteps approached nearer and nearer. I looked up, almost expecting to see those villainous countenances again.

"Women in danger!" shouted a manly voice, and several stalwart figures bounded to our side.

"Follow, follow!" cried Jessie, rushing forwards. I scarcely remember everything that occurred, for I was dizzy with excess of pleasure. There was a short scuffle, shots were fired at retreating bushrangers, and we saw our friends safe and free.

The whole matter was then related to our preservers--for such they were--and I then learnt that when the bushrangers had marched off our party to the camping-place, they proceeded to overhaul their pockets, and then bound them securely to some trees, whilst one stood ready with a pistol to shoot the first that should call for help, and the others looked over the plunder. This was little enough, for our travelling money, which was notes, was kept--strange treasury--in the lining of the body of my dress, and here too were the gold receipts from the Escort Office. Every night I took out about sufficient to defray the day's expenses, and this was generally given into Frank's hands.

Enraged and disappointed, the villains used most frightful language, accompanied by threats of violence; and the one on guard, irritated beyond his powers of endurance, fired the pistol in the direction of William's head. At this moment Jessie's first "coo-ey" was heard: this startled him, and the shot, from the aim of the pistol being disarranged, left him unhurt.

"It's that d----d child," muttered one, with a few, additional oaths; "we'll wring her neck when we've secured the plunder."

One of the ruffians now attempted more persuasive measures, and addressing Mr. L----, whom I suppose he considered the leader, expended his powers of persuasion much in the following manner.

"You sees, mate, we risks our lives to get your gold, and have it we will. Some you've got somewhere or another, for you havn't none on you got no paper from the Escort--you planted it last night, eh? Jist show us where, and you shan't be touched at all, nor that little wretch yonder, what keeps screeching so; but if you don't--" and here his natural ferocity mastered him, and he wound up with a volley of curses, in the midst of which our rescuers rushed upon them.

When we came to talk the whole matter over calmly and quietly, no doubt was left upon our minds, as to the premeditation of the whole affair. But for the watch kept, the attack would most probably have been made during the night.

Our timely friends were a party of successful diggers returning, from work. They too had passed the night in the Black Forest--providently not very far from us. They accepted our thanks in an off-hand sort of way, only replying--which was certainly true--"that we would have done the same for them." It was in endeavouring to assist assumed sufferers that our party fell into the ambush laid for them.

They waited whilst we got the dray and horses ready, and we all journeyed on together, till the Black Forest was far behind us. We saw no more of the bushrangers, and encamped that night a few miles beyond the "Bush Inn." At this inn we parted with our gallant friends. They were of the jovial sort, and having plenty of gold, were determined on a spree. We never met them again.

On Saturday we travelled as far as the "Deep Creek Inn." Some distance before reaching that place, we passed two rival coffee-shops on the road. We stopped at the first, to know if they had any uncooked or cold meat to sell, for our provisions were running low.

"Havn't none," said the woman, shaking her head. Then looking hard at William, and judging from his good-humoured face, that he was a likely one to do what she wanted, she said to him. "Now, Sir, I'm agoing to ax a favour of you, and that is to go a little farther down the road, to the other coffee-tent, and buy for me as much meat as they'll let you have. They's got plenty, and I've none; and they knows I'll lose custom by it, so you'll not get it if they twigs (ANGLICE guesses) you comes from me. You understand, Sir," and she put sovereign into his hand to pay for it.

Laughing at the comicality of the request, and the thoroughly colonial coolness of making it, William set off, and presently returned with nearly half a sheep hanging over his shoulders, and a large joint in one hand.

"Bless me, what luck!" exclaimed the delighted woman, and loud and profuse were her thanks. She wanted to cook us a good dinner off the meat gratis; but this we steadily refused and purchasing enough for the present, we put our drays again into motion, and a little while after kindled a fire, and were our own cooks as usual. That night we camped beside the Deep Creek, about a mile from the "Deep Creek Inn." The route we were now taking was different to the one we had travelled going up--it was much more direct.

We remained all Sunday beside the creek, and the day passed quietly and pleasantly.

On Monday the 25th we were again in motion. We passed the well known inn of Tulip Wright's. How great a change those few weeks had made! Winter had given place to summer, for Australia knows no spring. We walked along the beautiful road to Flemington, gave a look at the flagstaff and cemetery, turned into Great Bourke Street, halted at the Post-office, found several letters, and finally stopped opposite the "Duke of York Hotel," where we dined.

I shall leave myself most comfortably located here, whilst I devote a chapter or two to other diggings.

Chapter XIII.

BALLARAT

Ballarat is situated about forty-five miles from Geelong, and seventy-five nearly west of Melbourne. This was the first discovered goldfield of any extent in Victoria, and was made known on the 8th of September, 1851. The rush from Geelong was immense. Shops, stores, trades, all and everything was deserted; and the press very truly declared that "Geelong was mad--stark, staring gold-mad." During the month of September five hundred and thirty-two licences were taken out; in the month following the number increased to two thousand two hundred and sixty one!

The usual road to Ballarat is by the Adelaide overland route on the Gambier Road; but the most preferable is per Geelong. The former route leads over the Keilor Plains, and through Bacchus Marsh, crossing the Werribee River in two places. Mount Buninyong then appears in sight of the well-pleased traveller, and Ballarat is soon reached.

The route VIA Geelong is much quicker, as part of the way is generally performed by steam at the rate of one pound a-piece. Those who wish to save their money go to Geelong by land. After leaving Flemington, and passing the Benevolent Asylum, the Deep Creek is crossed by means of a punt, and you then come to a dreary waste of land, called Lett's Flat. Beyond is a steep rise and a barren plain, hardly fit to graze sheep upon, and at about twenty miles from Melbourne you come to the first halting house. Some narrow but rapid creeks must be got over, and for seven miles further you wander along over a dreary sheep-run till stopped by the Broken River, which derives its name partly from the nature of its rocky bed, and partly from the native name which has a similar sound

This creek is the most steep, rapid, and dangerous on the road, having no bridge and no properly defined crossing-place or ford, except the natural rocks about. The bottom is of red sand-stone and rocks of the same description abut from the sides of the creek, and appear to abound in the neighbourhood; and all along the plains here and there are large fragments of sand and lime-stone rocks. Two hundred yards from the creek is a neat inn after the English style, with a large sitting-room, a tap, a bar, and a coffee-room. The bed-rooms are so arranged as to separate nobs from snobs--an arrangement rather inconsistent in a democratic colony. The inn also affords good stabling and high charges. Up to this distance on our road there is a scarcity of wood and springs of water.

We now pass two or three huts, and for twenty miles see nothing to please the eye, for it is a dead, flat sheep-walk. About seven miles on the Melbourne side of Geelong, the country assumes a more cheering

appearance--homesteads, gardens, and farms spring up--the roads improve, and the timber is plentiful and large, consisting of shea-oaks, wattle, stringy bark, and peppermints. Many of the houses are of a good size, and chiefly built of stone, some are of wood, and very few of brick.

Geelong, which is divided into north and south, is bounded by the Barwin, a river navigable from the bay to the town, and might be extended further; beautiful valleys well wooded lie beyond. Between the two townships a park has been reserved, though not yet enclosed; the timber in it, which is large--consisting principally of white gum and stringy bark--is not allowed to be cut or injured. There are several good inns, a court-house, police-station, and corporation offices. There is also a neat church in the early pointed style, with a parsonage and schools in the Elizabethan; all are of dark lime-stone, having a very gloomy appearance, the stones being unworked, except near the windows; the porches alone slightly ornamented. The road and pavement are good in the chief streets; there is a large square with a conduit, which is supplied by an engine from the Barwin. The shops are large and well furnished, a great many houses are three stories high, most are two, and very few one. The best part of town is about one hundred feet above the river. A large timber bridge over the Ballarat road was washed down last winter. The town is governed by a mayor and corporation. There is a city and mounted police force, and a neat police-court. A large and good race-course is situated about three miles from the town.

As regards scenery, Geelong is far superior to Melbourne, the streets are better, and so is the society of the place; none of the ruffian gangs and drunken mobs as seen in Victoria's chief city. There are various, chapels, schools, markets, banks, and a small gaol. The harbour is sheltered, but not safe for strangers, as the shoals are numerous. Geelong is surrounded by little townships. Irish Town, Little Scotland, and Little London are the principal and to show how completely the diggings drained both towns and villages of their male inhabitants, I need only mention that six days after the discovery of Ballarat, there was only one man left in Little Scotland, and he was a cripple, compelled NOLENS VOLENS to remain behind.

The road from Geelong to Ballarat is well marked out, so often has it been trodden; and there are some good inns on the way-side for the comfort of travellers. On horseback you can go from the town to the diggings in six or eight hours.

Ballarat is a barren place, the ground is interspersed with rocky fragments, the creek is small, and good water is rather scarce. In summer it almost amounts to a drought, and what there is then is generally brackish or stagnatic. It is necessary never to drink stagnant water, or that found in holes, without boiling, unless there are frogs in it, then the water is good; but the diggers usually boil the water, and a drop of brandy, if they can get it. In passing through the plains you are sure of finding water near the surface (or by seeking a few inches) wherever the tea tree grows.

The chief object at the Ballarat diggings is the Commissioners' tent, which includes the Post-office. There are good police quarters now. The old lock-up was rather of the primitive order, being the stump of an old tree, to which the the prisoners were attached by sundry chains, the handcuff being round one wrist and through a link of the chain. I believe there is a tent for their accommodation. There are several doctors about, who, as usual, drive a rare trade.

It is almost impossible to describe accurately the geological features of the gold diggings at Ballarat. Some of the surface-washing is good, and sometimes it is only requisite to sink a few feet, perhaps only a few inches, before finding the ochre-coloured earth (impregnated with mica and mixed with quartz fragments), which, when washed, pays exceedingly well. But more frequently a deep shaft has to be sunk.

Of course the depth of the shafts varies considerably; some are sixty or even eighty, and some are only ten feet deep. Sometimes after heavy rains, when the surface soil has been washed from the sides of the hills, the mica layer is similarly washed down to the valleys and lies on the original surface-soil. This constitutes the true washing stuff of the diggings. Often when a man has--to use a digger's phrase--"bottomed his hole," (that is, cut through the rocky strata, and arrived at the gold layer), he will find stray indications, but nothing remunerative, and perchance the very next hole may be the most profitable on the diggings. Whether there is any geological rule to be guided by has yet to be proved, at present no old digger will ever sink below the mica soil, or leave his hole until he arrives at it, even if he sinks to forty feet. So, therefore, it may be taken as a general rule, wherever the diggings may be, either in Victoria, New South Wales, or South Australia, that gold in "working" quantities lies only where there is found quartz or mica.

Ballarat has had the honour of producing the largest masses of gold yet discovered. These masses were all excavated from one part of the diggings, known as Canadian Gully, and were taken out of a bed of quartz, at the depths of from fifty to sixty-five feet below the surface. The deep indentures of the nuggets were filled with the quartz. The largest of these masses weighed one hundred and thirty-four pounds, of which it was calculated that fully one hundred and twenty-six pounds consisted of solid gold!

About seven miles to the north of Ballarat, some new diggings called the Eureka have been discovered, where it appears that, although there are no immense prizes, there are few blanks, and every one doing well!

In describing the road from Melbourne to Geelong, I have made mention of the Broken River. A few weeks after my arrival in the colonies this river was the scene of a sad tragedy.

I give the tale, much in the same words as it was given to me, because it was one out of many somewhat similar, and may serve to show the state of morality in Melbourne.

The names of the parties are, of course, entirely fictitious.

* * * * *

Prettiest among the pretty girls that stood upon the deck as the anchor of the Government immigrant ship 'Downshire' fell into Hobson's Bay, in August, 1851, was Mary H----, the heroine of my story. No regret mingled with the satisfaction that beamed from her large dark eyes, as their gaze fell on the shores of her new country, for her orphan brother, the only relative she had left in their own dear Emerald Isle, was even then preparing to follow her. Nor could she feel sad and lonely whilst the rich Irish brogue, from a subdued but manly and well-loved voice, fell softly on her ear, and the gentle pressure of her hand continually reminded her that she was not alone.

Shipboard is a rare place for match-making, and, somehow or another, Henry Stephens had contrived to steal away the heart of the 'Downshire' belle. Prudence, however, compelled our young people to postpone their marriage, and whilst the good housewife qualities of the one readily procured her a situation in a highly respectable family in Melbourne, Henry obtained an appointment in the police force of the same town.

Their united savings soon mounted up, and in a few months the banns were published, and Christmas-Day fixed on for the wedding. Mary, at her lover's express desire, quitted her mistress's family to reside with a widow, a distant relative of his own, from whose house she was to be married. Delightful to the young people was this short period of leisure and uninterrupted intercourse, for the gold mania was now beginning to tell upon the excited imaginations of all, and Henry had already thrown up his situation; and it was settled their wedding trip should be to the golden gullies round Mount Buninyong.

And now let me hasten over this portion of my narrative. It is sad to dwell upon the history of human frailty, or to relate the oft-told tale of passion and villainy triumphant over virtue. A few days before Christmas, when the marriage ceremony was to be performed, they unfortunately spent one evening together alone, and he left her--ruined. Repentance followed sin, and the intervening time was passed by Mary in a state of the greatest mental anguish. With what trembling eagerness did she now look forward to the day which should make her his lawful wife.

It arrived. Mary and the friends of both stood beside the altar, whilst he, who should have been there to redeem his pledge and save his victim from open ruin and disgrace, was far away on the road to Ballarat.

To describe her agony would be impossible. Day after day, week after week, and no tidings from him came; conscience too acutely accounting to her for his faithlessness. Then the horrible truth forced itself upon her, that its consequences would soon too plainly declare her sin before the world; that upon her innocent offspring would fall a portion of its mother's shame.

Thus six months stole sorrowfully away, and as yet none had even conjectured the deep cause she had for misery. Her brother's non-arrival was also an unceasing source of anxiety, and almost daily might she have been seen at the Melbourne Post-office, each time to return more disappointed than before. At length the oft-repeated inquiry was answered in the affirmative, and eagerly she tore open the long-anticipated letter. It told her of an unexpected sum of money that had come into his hands--to them a small fortune--which had detained him in Ireland. This was read and almost immediately forgotten, as she learnt that he was arrived in Melbourne, and that only a few streets now separated them.

She raised her face, flushed and radiant with joyful excitement--her eyes fell upon him who had so cruelly injured her. The scream that burst from her lips brought him involuntarily to her side. What will not a woman forgive where once her heart has been touched--in the double joy of the moment the past was almost forgotten--together they re-read the welcome letter, and again he wooed her for his bride. She consented, and he himself led her to her brother, confessed their mutual fault, and second preparations for an immediate marriage were hurriedly made.

Once more at the altar of St. Peter's stood the bridal party, and again at the appointed hour Stephens was far gone on his second expedition to the diggings, after having increased (if that was possible) his previous villainy, by borrowing a large portion of the money before mentioned from his intended brother-in-law. It was pretty evident that the prospect of doing this had influenced him in his apparently honourable desire to atone to the poor girl, who, completely prostrated by this second blow, was laid on the bed of sickness.

For some weeks she continued thus and her own sufferings were increased by the sight of her brother's fury, as, on her partial recovery, he quitted her in search of her seducer.

During his absence Mary became a mother, and the little one that nestled in her bosom, made her half forgetful of her sorrows, and at times ready to embrace the delusive hope that some slight happiness in life was in store for her. But her bitter cup was not yet drained. Day by day, hour by hour, her little one pined away, until one dreary night she held within her arms only its tiny corpse.

Not one sound of grief--not an outward sign to show how deeply the heart was touched--escaped her. The busy neighbours left her for awhile, glad though amazed at her wondrous calmness; when they returned to finish their preparations for committing the child to its last resting-place, the mother and her infant had disappeared.

Carrying the lifeless burden closely pressed against her bosom, as though the pelting rain and chilling air could harm it now, Mary rapidly left the town where she had experienced so much misery, on--on--towards Geelong, the route her seducer and his pursuer had

taken--on--across Lett's Flat, until at length, weak and exhausted, she sank down on the barren plains beyond.

Next morning the early dawn found her still plodding her weary way--her only refreshment being a dry crust and some water obtained at an halting-house on the road; and many a passer-by, attracted by the wildness of her eyes, her eager manner, and disordered dress, cast after her a curious wondering look. But she heeded them not--on--on she pursued her course towards the Broken River.

Here she paused. The heavy winter rains had swollen the waters, which swept along, dashing over the irregular pieces of rock that formed the only means of crossing over. But danger was as nothing to her now--the first few steps were taken--the rapid stream was rushing wildly round her--a sensation, of giddiness and exhaustion made her limbs tremble--her footing slipped on the wet and slimy stone--in another moment the ruthless waters carried her away.

The morrow came, and the sun shone brightly upon the still swollen and rapid river. Two men stood beside it, both too annoyed at this impediment to their return to Melbourne to be in the slightest degree aware of their proximity to one another. A bonnet caught by a projecting fragment of rock simultaneously attracted their attention: both moved towards the spot, and thus brought into closer contact they recognized each other. Deadly foes though they were, not a word passed between them, and silently they dragged the body of the unhappy girl to land. In her cold and tightened grasp still lay the child. As they stood gazing on those injured ones, within one breast remorse and shame, in the other, hatred and revenge, were raging violently.

Each step on the road to Ballarat had increased her brother's desire for vengeance, and still further was this heightened on discovering that Stephens had already left the diggings to return to town. This disappointment maddened him; his whole energy was flung into tracing his foe, and in this he had succeeded so closely, that unknown to either, both had slept beneath the same roof at the inn beside the Broken River.

The voices of some of the loungers there, who were coming down to the Creek to see what mischief had been done during the night, aroused him. He glanced upon his enemy, who pale and trembling, stood gazing on the wreck that he had made. Revenge at last was in his hands--not a moment was to be lost--with the yell of a maniac he sprang upon the powerless and conscious-stricken man--seized him in his arms rushed to the river--and ere any could interpose, both had found a grave where but a few minutes before the bodies of Mary and her infant had reposed.

NEW SOUTH WALES

About seventy years ago a small colony of convicts first made the forests ring with the blows of the axe, and a few tents were erected where Sydney now stands. The tents, and they who dwelt beneath them, have long since disappeared, and instead we have one of the finest cities that our colonial empire ever produced.

The streets in Sydney are, as in Melbourne, built at right angles with one another; they are macadamized, well lighted with gas, and perambulated by a number of policemen during the night. Some of the shops almost rival those of London, and the public buildings are good and numerous. There is a custom-house, a treasury, police-office, college, benevolent asylum, banks, barracks, hospitals, libraries, churches, chapels, a synagogue, museum, club-house, theatre, and many splendid hotels, of which the largest is, I think the "Royal Hotel," in George Street, built at the cost of 30,000 pounds.

Hyde Park is close at hand, with un-numbered public walks, and a botanical garden, the favourite resort of all classes.

In the neighbourhood of Sydney are some good oyster-beds, and many are the picnics got up for the purpose of visiting them. The oysters cling to the rocks, and great numbers are easily obtained.

The distance from Sydney to Melbourne, by the overland road, is about six hundred miles; but the steamers, which are constantly plying, afford a more comfortable mode of transit.

The gold diggings of New South Wales are so well known as to require but a cursory notice. The first official notification of the fact of gold having been discovered bears date, May 22, 1851, and is contained in a despatch from the Governor to Earl Grey. In it he announced the existence of a gold field to the westward of Bathurst, about one hundred and fifty miles from Sydney. At the same time, he added his supposition that the gold sent for inspection was Californian.

Mr Stutchbury, the geological surveyor, quickly undeceived his Excellency. He wrote from Hill Creek reporting that four hundred persons were hard at work, and that the gold existed not only in the creek but beyond it. The following postscript was added to his letter: "Excuse this being written in pencil, as there is no ink in this city of Ophir." And this appropriate name has ever since been retained.

The natural consequences of this discovery was the flocking of hundreds of the inhabitants of Sydney to Bathurst. Sober people began to be alarmed at this complete BOULEVERSEMENT of business and tranquillity. For the sake of order the Governor attempted to put a stop to the increasing desertion of the capital by proclaiming that the gold-fields were the prerogative of the Crown, and threatening gold-diggers with prosecution. It was all in vain. The glitterings of

the precious metal were more attractive than the threats of the Governor were otherwise. The people laughed good-humoured at the proclamation, and only flocked in greater numbers to the auriferous spot.

Government now took a wiser course, and finding it impossible to stem the torrent, determined to turn the eagerness of the multitude to some account. A licence-fee of 30s., or half an ounce of gold, per month was imposed, which, with few exceptions, has always been cheerfully paid.

The Turon diggings soon followed those of Bathurst. This river flows into the Macquarie after a course of a hundred miles. Along the entire length auriferous discoveries are constantly being made, and it bids fair to last for many years to come. The gold is not found, as many erroneously suppose, so much among the sand as by digging in the soil. It also exists in paying quantities on the shores and in the rive flows of the Macquarie, the Abercrombie, and Belubula rivers. Major's Creek, too, is a favourite locality, and was first made known by a prospecting woman.

According to Mr. Stutchbury's report, he found gold ALMOST WHEREVER HE TRIED FOR IT, and whilst traversing the Macquarie from Walgumballa to the Turon, he found it at EVERY place he tried. Surely Midas must, once upon a time, have taken a pleasure-trip to Australia!

The delirium of the Sydney gold-fever reached its height when it became publicly known that a piece of one hundred and six pounds weight had been disembowelled from the earth, at one time. This immense quantity was the discovery of a native, who, being excited by the universal theme of conversation, provided himself with a tomahawk, and explored the country adjacent to his employer's land. He was attracted by a glittering yellow substance on the surface of a block of quartz. With his tomahawk he broke off a piece, which he carried home to his master, Dr. Kerr, of Wallawa. Not being able to move the mass conveniently, Dr. Kerr broke it into small fragments. The place where it was found is at the commencement of an undulating table-land, very fertile, and near to a never-failing supply of water in the Murroo Creek. It is distant about fifty miles from Bathurst, thirty from Wellington, and twenty from the nearest point of the Macquarie river.

Dr. Kerr presented the native and his brother with two flocks of sheep, two saddle-horses, a quantity of rations, a team of bullocks, and some land.

About twenty yards from the spot where this mass was found, a piece of gold called the "Brennan Nugget" was soon after discovered. It weighed three hundred and thirty-six ounces, and was sold in Sydney for more than 1,100 pounds.

But it would be useless to enter into fuller particulars of the diggings of New South Wales. Panoramas, newspapers, and serials have made them familiar to all.

Chapter XV.

SOUTH AUSTRALIA

Adelaide, the capital of South Australia, was the last formed of the three sister colonies. In 1834 an act of colonization was obtained; and land, both in town and country, sold rapidly. The colonists, however, were most unfortunately more engaged in speculating with the land, than grazing upon or tilling it; and the consequence was, that in a few years the South Australians were only saved from a famine by the unexpected arrival overland of herds and flocks from Victoria. As it was, horses and cows of a very indifferent kind were sold for more than a hundred pounds a-piece, and sheep for five pounds a head.

The discovery of the copper mines alone saved the country from ruin. The first was the Kapunda. It was accidentally discovered by a shepherd, who picked up a piece on the surface of the ground, and showed it to his master. Pieces of copper ore may even now be found in the same way.

Next followed the far-famed Burra-Burra. In the latter mine there is a great quantity of malachite, which, when smelted, gives copper at an average of eighty-five per cent.

South Australia possesses the finest river in Australia--namely, the Murray, on which steamers will soon ply as far as five hundred miles up the country. On either side of this river is a thick and dry scrub--sometimes ten, sometimes thirty miles wide. In this scrub, manna is not unfrequently found, to the great delight of the natives, who are very fond of it. It is of a very excellent description, and in colour has a slight tendency to pink.

Adelaide itself is a well-laid out town. The streets are built in the same manner as in Sydney and Melbourne; but those in Adelaide are much wider. Many of the buildings and warehouses are highly creditable, particularly when we take the juvenile age of the colony into consideration.

Adelaide has never yet been "a transportation colony," and the society there is usually considered more RECHERCHE than in any other city in Australia. The climate is very good, and the vine flourishes as in the south of France. The principal export of South Australia is copper, to which may be added some wool and tallow.

The roads about are excellent, and the small farms in the neighbourhood are more in the English style than one could expect to meet with so many thousand miles away from home.

The overland route from Adelaide to Melbourne is about four hundred miles in length. In summer the road is pretty good, but in winter, a lake or swamp of twenty miles extent has to be waded through.

The scrub about South Australia is very thick, and any one may easily lose themselves in it. This has in fact often been the case, and a fearful instance of it occurred some few years ago. A young lady--the daughter of a gentleman residing near Adelaide--started out one Sunday afternoon with a book as her companion. Evening came, and she did not return, which alarmed her family, and search was made far and near--but in vain. On the fourth day, they at length discovered her lying dead at the foot of a tree. The pages of her book were covered with sentences, pricked in with a pin, expressive of her sufferings and of her unavailing efforts to retrace her steps. She was only three miles from her father's house when she sank down to die of hunger, thirst, and exhaustion; and probably during the whole time of her wanderings had never exceeded that distance from her home.

The Adelaide gold-diggings began to excite attention in the months of August and September, 1852. In October the following report was made:

"Camp, Echunga, Gold-Fields,
"October 2, 1852.

"Sir,

"I have the honour to state for the information of his Excellency the Lieutenant-Governor, that since my last report sixty licences have been issued, making a total of three hundred and fifty-six. * * * * Many families of respectability have arrived, and are now living in comfortable and commodious tents. The presence of well-dressed women and children gives to the gold-fields, apparently distinguished for decorum, security and respectability.

"From the feeling of greater security and comfort, combined with cheapness of living, all classes of diggers are unanimous in their preference of this place to Victoria. * * * *

"The nugget of gold which I have forwarded for his Excellency's inspection, weighing about an ounce and a half, was found about seven feet below the surface.* * * *

"There are some few amongst the lately arrived who expressed dissatisfaction with the result of their labours and observations, while others, who have been working for the last month, have promptly renewed their expired licences.

(Signed) "A. J. MURRAY,
"Assistant Gold Commissioner.
"The Hon. the Colonial Secretary."

In the month of October several pieces of gold, weighing each half an ounce and upwards, were found, and a few of the holes that had been abandoned by inexperienced hands, when taken possession of by old diggers on the Turon or the Bendigo, were found to contain good washing stuff. The diggings were well supplied with food of every kind; and during the summer months there could be no lack of fruits and vegetables in abundance, at reasonable prices, supplied from the numerous and well-cultivated farms and gardens around. This is certainly an advantage over the diggings of Victoria or New South Wales, if gold really does exist in paying quantities; if not, all the fruit and vegetables in the world would not keep the diggers at Echunga.

The following "Lament" was circulated in Adelaide, but not one of the newspapers there would print it. They were all too anxious for the success of their diggings, to countenance any grumblers against them:

A LAMENT FOR MY THIRTY SHILLINGS,
DEDICATED TO THE ECHUNGA VICTIMS,

My one pound ten! my one pound ten!
I paid as Licence Fee;
Ah! cruel Bonney! pray return,
That one pound ten to me.

When to Echunga diggings first
I hastened up from town,
Thy tent I sought with anxious care
And paid the money down.

And though my folly ever since
I bitterly deplore,
It soothes my mind to know there were
Three scores of fools before.

Then, Bonney, listen to my lay,
And if you wish to thrive,
Send back the money quick to me,
To number sixty-five.

Who wants but little here below,
Nor wants that little long,
Had better to Echunga go,
And not to Mount Coorong.

But as for me I like a swag,
At least a little more
Than what we got there in a week--
Eight pennyweights 'mongst four.

For that, of surface earth we washed

Of dray loads half a score;
I'll swear that cradling never seemed
Such tedious work before.

To sink for gold we then commenced,
With grief I must confess,
'Twas fruitless toil, although we went
Down thirty feet or less.

All you who've paid your one pound ten,
Are on your licence told
That then you are entitled to
Remove alluvial gold.

But if the alluvial gold's not there
I'd like to have it proved
By what ingenious process it
Can ever be removed?

Then back to Bendigo I'll haste,
To seek the precious ore;
Although my one pound ten I fear
Returns to me no more.

Yet as the boundary line I cross,
My parting prayer shall be--
Ah! cruel Bonney! pray return
My one pound ten to me!

ANTIGROPOLOS.
Adelaide, September 1852.

With a short extract from the "South Australian Register" of
February 7, 1853, I shall conclude my remarks on the Adelaide diggings.

"THE GOLD FIELDS.--Although there is at the diggings everything to
indicate gold in large quantities, none have succeeded in realizing
their hopes. The majority content themselves with what they can get on
Chapman's Hill and Gully, knowing that, if a fresh place is discovered,
they will stand as good a chance as those who have spent months
in trying to find better ground.

"The quantity of gold taken to the Assay-office, during four
consecutive weeks, amounting to less than four thousand ounces, the
Governor has proclaimed that after the 17th of February the office will
be closed."

MELBOURNE AGAIN

It was on Monday the 25th of October, that for the second time I entered Melbourne. Not many weeks had elapsed since I had quitted it for my adventurous trip to the diggings, yet in that short space of time how many changes had taken place. The cloudy sky was exchanged for a brilliant sunshine, the chilling air for a truly tropical heat, the drizzling rain for clouds of thick cutting dust, sometimes as thick as a London fog, which penetrated the most substantial veil, and made our skins smart terribly. The streets too had undergone a wondrous transformation. Collins Street looked quite bright and cheerful, and was the fashionable promenade of those who had time or inclination for lounging. Parties of diggers were constantly starting or arriving, trips to St. Kilda and Brighton were daily taking place; and a coach was advertised to run to the diggings! I cannot quite realize the terrified passengers being driven through the Black Forest, but can picture their horror when ordered to "bail up" by a party of Australian Turpins.

In every window--milliners, baby-linen warehouses, &c., included--was exhibited the usual advertisement of the gold buyer--namely, a heap of gold in the centre, on one side a pile of sovereigns, on the other bank-notes. The most significant advertisement was one I saw in a window in Collins Street. In the middle was a skull perforated by a bullet, which lay at a little distance as if coolly examining or speculating on the mischief it had done. On one side of the skull was a revolver, and on the other a quantity of nuggets. Above all, was the emphatic inscription, "Beware in time." This rather uncomfortable-looking tableau signified--in as speaking a manner as symbols can--that the unfortunate skull had once belonged to some more unfortunate lucky digger, who not having had the sense to sell his gold to the proprietor of this attractive window had kept his nuggets in his pocket, thereby tempting some robbers--significantly personified by the revolver--to shoot him, and steal the gold. Nowhere could you turn your eye without meeting "30,000 oz. wanted immediately; highest price given;" "10,000 oz. want to consign per ----; extra price given to immediate sellers," &c. Outwardly it seemed a city of gold, yet hundreds were half perishing for want of food, with no place of shelter beneath which to lay their heads. Many families of freshly-arrived emigrants--wife, children, and all--slept out in the open air; infants were born upon the wharves with no helping hand near to support the wretched mother in her misery.

How greatly the last few weeks had enlarged Melbourne. Cities of tents encompassed it on all sides; though, as I said before, the trifling comfort of a canvas roof above them, was denied to the poorest of the poor, unless a weekly tax were paid!

But I must return to ourselves. Our first business the next morning was

to find for our little Jessie some permanent home; for all our movements were so uncertain--I myself, thinking of a return to the old country--that it was considered advisable to obtain for her some better friends than a set of volatile, though good-hearted young fellows--not the most suitable protection for a young girl, even in so lax a place as the colonies. We never thought of letting her return to England, for there the life of a female, who has her own livelihood to earn, is one of badly-paid labour, entailing constant privation, and often great misery--if not worse. I have before said that William had relatives in Melbourne, and to them we determined to entrust her. Mrs. R----- was a kind-hearted and most exemplary woman; and having a very young family of her own, was well pleased at such an acquisition as the thoughtful, industrious little Jessie. Each of our party contributed a small portion of their golden earnings to form a fund for a future day, which I doubt not will be increased by our little friend's industry, long before she needs it. Here let us leave her, trusting that her future life may be as happy as her many excellent qualities deserve, and hoping that her severest trials have already passed over her.

Our next care was to obtain our gold from the Escort-office; to do which the receipts given in Bendigo had to be handed in, and after very little delay the precious packets were restored to their respective owners. The following is a facsimile of the tickets, printed on parchment, attached to each parcel of which a duplicate, printed on common paper, is given to the depositor:

BENDIGO CREEK.

No. 2772.

Date, 8th of October, 1852.

Name, Mr. A----

Quantity, 60 oz. 10 dwts.

Consigned to, Self.

The trifling charge for all this trouble and responsibility is sixpence an ounce.

The business satisfactorily arranged, the next was to dispose of it. Some was converted into money, and sold for 69s. an ounce; and the remainder was consigned to England, where, being very pure and above standard, it realized 4 pounds an ounce. A great difference that!

We next paid Richard a visit, who, though surprised was well pleased to see us again. He declared his resolution of returning to England as soon as possible. Our party fixed their journey to the Ovens to take place in three weeks. William determined to remain in town, which I think showed wisdom on his part as his health was not equal to roughing it in the bush; and this was a much more formidable trip than the last, on account of length, and being much less frequented.

Meanwhile we enjoyed the fine weather, and our present companionship, as much as possible, while taking little trips here, there, and everywhere. The one I most enjoyed was a sail in the Bay. The captain of the vessel in which we left England, was still detained in

Port Philip for want of hands--the case of hundreds--and offered to give us a sail, and a dinner on board afterwards. We soon made up a large party, and enjoyed it exceedingly. The day was lovely. We walked down to Liardet's Beach, a distance of nearly three miles, and were soon calmly skimming over the waters. We passed St. Kilda and Brighton, and gained an excellent view of the innumerable vessels then lying useless and half-deserted in the Bay.

It was a sad though a pretty sight. There were fine East Indiamen, emigrant ships, American clippers, steamers, traders--foreign and English--whalers, &c., waiting there only through want of seamen.

In the cool of the evening our gallant host rowed us back to the beach. Since our first landing, tents and stores had been erected in great numbers, and Little Adelaide was grown wonderfully. I think I have never mentioned the quantity of frogs that abound in Australia. This particular evening I remarked them more than usual, and without the least exaggeration their croaking resembled a number of mills in motion. I know nothing to which I can more appropriately liken the noise that resounded along the swampy portions of the road, from the beach to Melbourne.

Much has been said of the climate of Australia, and many are the conflicting statements thereon. The following table contains all the information--personal and otherwise--which I have been enabled to collect.

JANUARY AND FEBRUARY.--Generally the hottest months; average of the thermometer, 78 in the shade; thunder-storms and COLONIAL showers of rain occasionally visit us.

MARCH.--Fine genial weather; average temperature, 73 in the shade.

APRIL.--Weather more uncertain; mosquitos depart; average temperature, 70 in the shade:

MAY.--Fine, till towards the latter part of the month, when sometimes the rainy season commences; average temperature in the shade, 64.

JUNE.--Rainy, and much cooler; temperature at an average of 58 in the shade.

JULY.--Coldest month in the year; midwinter in the colonies; average temperature, 53. Ice and snow may be seen inland.

AUGUST.--Very rainy. Average temperature, 58 in the shade.

SEPTEMBER.--Windy stormy month; weather getting warmer. Average temperature, 63 in the shade.

OCTOBER--The presence of the mosquito, a sure proof that the weather is permanently warm. Average temperature in the shade, 66.

NOVEMBER AND DECEMBER.--Tropically warm. Locusts, mosquitos, and unnumbered creeping things swarm both in bush and town. Towards the end of December the creeks commence to dry up, and the earth looks parched for want of rain. No yule-log needed on Christmas Day. Thermometer as high as 97 in the shade; average 75.

The principal trees in Australia are the gum, stringy bark, manna tree, wild cherry (so called), iron bark, shea oak, peppermint, acacia, and the mimosa, which last, however, should more properly be called a shrub. These and others, like the Indian malelucas, are remarkable for the Cajeput oil contained in their leaves, and in the gums which exude from their stems, and in this point of view alone, considering their boundless number, their value can hardly be over estimated. The gum of some of the acacias will bear comparison with gum-arabic. Their bark and timber are likewise useful, and when the gold fever has subsided, will become valuable as exports.

Wild flowers there are in abundance, and some exquisite specimens of ferns. For the benefit of those better skilled in botany than myself, I give the following list of Dr. Muller's indigenous plants of Victoria. *Correaochrolenca* and *Phebalium Asteriscophorum*, both with the medical properties of the Bucco-bush, *Eurybia Rhodochaeta*, *E. Rugosa*, *E. Adenophylla*, *E. Asterotristia*, *Sambucus*, *Gaudichaudiana*, *Prostanthera Hirsuta*, *Pimelea axiflora* (powerful Surrogat of the Mezerion shrub), *Bossidea decumbcus*, *Asterotristia asperifolia*, *Patersonia aspera*, *Grevilliea repens*, *Dallachiana*, &c.

The geranium, fuschia, rhododendrum, and almost all varieties of the Cacti have been taken to the colonies, and flourish well in the open air all the year round, growing much more luxuriantly than in England.

The vineyards must some day form a considerable source of employment and profit to the colonists. The wine made in Australia is very good. The vines are cultivated in the same manner as in France. In the neighbourhood of Sydney, oranges and peaches are grown out in the open air. Apples and other fruits flourish well in Van Diemen's Land. All these fruits are not indigenous to Australia. The only articles of food natural there, are the kangaroos, emus, opossums, and other denizens of the forest, a few snakes, some roots, and a worm, about the length and thickness of a finger, which is abundant in all parts of the colony, and is taken out of the cavities, or from under the bark, of the trees. It is a great favourite with the blacks, as it can be procured when no other food is attainable.

I have before made mention of the bush and scrub; there is a great dissimilarity between the two. The former resembles a forest, with none or very little underwood. The scrub, on the contrary, is always underwood, of from six to twenty feet high, and only here and there a few trees are seen. To be lost in either bush or scrub is a common thing. If on horseback the best way is to give the rein to your four-footed companion, and instinct will most probably enable him to extricate you. If on foot, ascend, if possible, a rise of ground, and notice any FALL in the country; here, most likely, is a creek, and once

beside that, you are pretty sure of coming to a station. If this fails, you must just bush it for the night, and resume your search next morning, trusting to an occasional "coo-ey" to help you out of your difficulty.

The scenery of Australia partakes of all characters. Sometimes miles of swamp reminds one of the Lincolnshire fens; at other times it assumes quite a park-like appearance, though the effect is greatly injured by the want of freshness about the foliage, which always looks of a dirty, dingy green. The native trees in Australia never shed their leaves, never have that exquisite young tint which makes an English spring in the country so delicious. Their faded look always reminded me of those unfortunate trees imprisoned for so many months beneath the Crystal Palace.

The mountains in Australia are high and bold in outline, and the snow-capped Alps on the boundaries of New South Wales are not unlike their European namesakes, the highest tops are from six to seven thousand feet above the level of the sea. The country round Ballarat is more in the North American style, and when the creek is full, it is a fine sight, greatly resembling, I have heard, one of the smaller rivers in Canada; in fact, the scenery round Ballarat is said to approach more to Upper Canada than any in the colony. The rocks, although not high, are in places very bold and romantic, and in the wet season there are several water-falls in the neighbourhood.

Eels are very plentiful in Victoria, and are peculiar to this district, being seldom, if ever, found in any other part of the known continent. Old writers on Australia have stated that eels are unknown in this part of the world, which, since this colony has been settled in, has been found to be erroneous, as the Barwin, the Yarra Yarra, and their tributaries abound with them, some weighing five or six pounds. A few days after our return from the diggings, we breakfasted off a dish of stewed eels, caught by a friend; the smallest weighed about a pound and a half, the largest about three pounds. They were caught three miles from Melbourne, in the Salt Water Creek.

A small kind of fish like the lamprey, another similar to the gudgeon, and also one (of rather a larger kind--the size of the roach) called here "white herrings," but not at all resembling that fish, are found. Pike are also very numerous. Crabs and lobsters are not known here, but in the salt creeks near the sea we have craw-fish.

Of course, parrots, cockatoos and "sich-like," abound in the bush, to the horror of the small gardeners and cultivators, as what they do not eat they ruin by destroying the young shoots.

Kangaroos are extremely numerous in the scrub. They are the size of a large greyhound, and of a mouse colour. The natives call them "kanguru." The tail is of great strength. There are several varieties of them. The largest is the Great Kangaroo, of a greyish-brown colour, generally four or five feet high and the tail three. Some kangaroos are nearly white, others resemble the hare in colour. Pugs, or young

kangaroos, are plentiful about the marshy grounds; so are also the opossum and kangaroo rat. The latter is not a rat, properly speaking, but approaches the squirrel tribe. It is a lilliputian kangaroo, the size of our native wood squirrel and larger, only grey or reddish-grey. It can leap six or eight feet easily, and is excellent eating. The native dog is of all colours; it has the head and brush of a fox, with the body a legs of a dog. It is a cowardly animal, and will run away from you like mad. It is a great enemy of the kangaroo rat, and a torment to the squatter, for a native dog has a great PENCHANT for mutton and will kill thirty or forty sheep in the course of an hour.

A species of mocking-bird which inhabits the bush is a ludicrous creature. It imitates everything, and makes many a camping party imagine there is a man near them, when they hear its whistle or hearty laugh. This bird is nicknamed the "Jackass," and its loud "ha! ha! ha!" is heard every morning at dawn echoing through the woods and serving the purpose of a "boots" by calling the sleepy traveller in good time to get his breakfast and pursue his journey. The bats here are very large.

Insects, fleas, &c., are as plentiful as it is possible to be, and the ants, of which there are several kinds, are a perfect nuisance. The largest are called by the old colonists, "bull-dogs," and formidable creatures they are--luckily not very common, about an inch and a half long, black, or rusty-black, with a red tail. They bite like a little crab. Ants of an inch long are quite common. They do not--like the English ones--run scared away at the sight of a human being--not a bit of it; Australian ants have more PLUCK, and will turn and face you. Nay, more, should you RETREAT, they will run after you with all the impudence imaginable. Often when my organ of destructiveness has tempted me slightly to disturb with the end of my parasol one of the many ant-hills on the way from Melbourne to Richmond, I have been obliged, as soon as they discovered the perpetrator of the attack, to take to my heels and run away as if for my life.

Centipedes and triantelopes (colonial, for tarantula) are very common, and though not exactly fatal, are very dangerous if not attended to. The deaf adder is the most formidable "varmint" in Australia. There are two varieties; it is generally about two feet long. The bite is fatal. The deaf adder never moves unless it is touched, hence its name. I do not think it has the power of twisting or twirling, like the ordinary snake or adder and it is very slow in its movements. There are several species of snakes, some of them are extremely venomous and grow to a large size, as long as ten feet. The black snake is the most venomous of any; its bite is fatal within a few hours.

But let us leave these wilder subjects and return to Melbourne.

The state of society in the town had not much improved during my absence. On the public road from Melbourne to St. Kilda, fifteen men were robbed in one afternoon, and tied to trees within sight of one another. In Melbourne itself the same want of security prevailed, and concerts, lectures, &c., were always advertised to take place when

there was a full moon, the only nights any one, unarmed, dared venture, out after dusk. The following extract from the "Argus," gives a fair specimen of Melbourne order.

"We are led to these remarks (referring to a tirade against the Government) by an occurrence that took place last week in Queen Street, the whole detail of which is peculiarly illustrative of the very creditable state of things, to which, under the happy auspices of a La Trobe dynasty, we are rapidly descending.

"A ruffian robs a man in a public-house, in broad daylight. He is pursued by a constable and taken. On the way to the watchhouse a mob collects, the police are attacked, pistols are pointed, bludgeons and axe-handles are brought out of the adjacent houses (all still in broad daylight, and in a busy street), and distributed amongst the crowd, loud cries inciting attack are heard, a scuffle ensues, the police are beaten, the prisoner is rescued, the crowd separates, and a man is left dead upon the ground. The body is taken into a public-house, an inquest is held, the deceased is recognized as a drunkard, the jury is assured that a POST-MORTEM examination is quite unnecessary; and the man is buried, after a verdict is brought in of 'Died by the visitation of God;' the said visitation of God having, in this instance, assumed the somewhat peculiar form of a fractured skull!"

This is a true picture of Melbourne; but whether the "Argus" is justified in reproaching the "La Trobe dynasty" with it, is quite another matter.

In pages like these, anything resembling an argument on the "transportation question," would be sadly out of place. To avoid thinking or hearing it was impossible, for during my second stay in Melbourne, it was a never-failing subject of conversation. In Victoria (which is only forty-eight hours' journey from Van Diemen's Land), I have seen the bad results of the mingling of so many transports and ticket-of-leave men among the free population. On the other hand, I have heard from many and good authorities, of the substantial benefits conferred on Sydney and New South Wales by convict labour. It is difficult to reconcile these two statements, and it is an apple of discord in the colonies.

Whilst in Victoria, I met with a great variety of emigrants, and I was much struck by the great success that seems to have attended on almost all of those who came out under the auspices of Mrs. Chisholm. No one in England can fully appreciate the benefits her unwearied exertions have conferred upon the colonies. I have met many of the matrons of her ships, and not only do they themselves seem to have made their way in the world, but the young females who were under their care during the voyage appear to have done equally well. Perhaps one way of accounting for this, is the fact that a great many of those going out by the Chisholm Society are from Scotland, the inhabitants of which country are peculiarly fortunate in the colonies, their industry, frugality, and "canniness" being the very qualities to make a fortune there. "Sydney Herbert's needlewomen" bear but a bad name; and the

worst recommendation a young girl applying for a situation can give, is to say she came out in that manner--not because the colonists look down on any one coming out by the assistance of others, but because it is imagined her female associates on the voyage cannot have been such as to improve her morality, even if she were good for anything before.

Much is said and written in England about the scarcity of females in Australia, and the many good offers awaiting the acceptance of those who have the courage to travel so far. But the colonial bachelors, who are so ready to get married, and so very easy in their choice of a wife, are generally those the least calculated, in spite of their wealth, to make a respectable girl happy; whilst the better class of squatters and diggers--if they do not return home to get married, which is often the case--are not satisfied with any one, however pretty, for a wife, unless her manners are cultivated and her principles correct.

To wander through Melbourne and its environs, no one would imagine that females were as one to four of the male population; for bonnets and parasols everywhere outnumber the wide-awakes. This is occasioned by the absence of so many of the "lords of creation" in pursuit of what they value--many of them, at least--more than all the women in the world--nuggets. The wives thus left in town to deplore their husbands' infatuation, are termed "grass-widows"--a mining expression.

And now two out of the three weeks of our party's stay in Melbourne has expired, during which time a change (purely personal) had made my brother's protection no longer needed by me. MY wedding-trip was to be to England, and the marriage was to take place, and myself and CARO SPOSO to leave Australia before my brother departed for the Ovens diggings. The 'C----,' a fine East Indiaman, then lying in the bay, was bound for London. We were to be on board by the 12th of November.

This of course gave me plenty to do, and my last morning but one in Melbourne was dedicated to that favourite feminine occupation--which, however, I detest--I mean, shopping. This being accomplished to my great dissatisfaction--for all I bought could have been obtained, of a better description, for half the price in England--I was preparing to return home by way of Collins Street, when my name in familiar accents made me suddenly pause. I instantly recognised the lady who addressed me as one of the English governesses in a "finishing" school where three years of my girlhood were passed. Julia ----- was a great favourite among us; no one could have done otherwise than admire the ability and good-humour with which she fulfilled her many arduous duties. Perhaps, of all miserable positions for a well-educated and refined young person to be placed in, that of "little girls' teacher" in a lady's school is the worst.

Her subsequent history I learnt as we walked together to my present abode.

Her mother had had a cousin in Sydney, who being old and unmarried, wrote to her, promising to settle all his property, which was

considered large, upon her daughter and herself, his only living relatives, provided they came out to the colonies to live with him until his death. A sum of money to defray the expenses of the voyage was enclosed. This piece of unexpected good news was received with pleasure, and the invitation gladly accepted. They sailed for Sydney. On arriving there, they found that some speculation, in which he was greatly involved, had failed; and the old man had taken the loss so greatly to heart, that he died only five months after having dispatched the letter to his English relatives.

Poor Julia was placed in a most painful position. In England she had scarcely been able to support her invalid mother by her own exertions, but in a strange country and without friends these difficulties seemed increased. Her first act was to look over the advertizing columns of the papers, and her eye caught sight of one which seemed exactly to suit her. It was, "Wanted, a governess to take the entire charge of a little girl, the daughter of a widower, and also an elderly lady, to superintend the domestic arrangements of the same family during the continual absence of the master at another station." Julia wrote immediately, and was accepted. In the occasional visits that her pupil's father paid to his little girl, he could not fail to be struck by the sweet disposition and many other good qualities of her governess, and it ended by his making her his wife. I felt at liberty to congratulate her, for she looked the picture of happiness. I saw her again next day, when she showed me the advertisement which had been the means of such a change in her circumstances.

The day before my departure was a painful one, so many farewells to be taken of dear friends whom I should never meet again.

On Friday, the 15th of November, my brother and all our party, Richard and Jessie included, accompanied us to the pier at Williamstown, to which we were conveyed by a steamer. For this we paid five shillings a-piece, and the same for each separate box or parcel, and twelve shillings to a man for carting our luggage down to the Melbourne wharf, a distance of not a mile.

On landing at the pier, how greatly was I astonished to meet Harriette and her husband. Her modest desires were gratified, and they had realized sufficient capital at the diggings to enable them to settle most comfortably near Adelaide. In hurried words she told me this, for their boat was already alongside the pier waiting to take them to their ship. Hardly had they departed than a boat arrived from our vessel to convey us to it. Sad adieux were spoken, and we were rowed away.

That evening a pilot came on board, anchors were weighed, we left the bay, and I saw Melbourne no more.

HOMeward BOUND

We soon left Port Philip far behind, and in a few days saw nothing but a vast expanse of water all around us. Our vessel was filled with returning diggers; and it is worth while to remark that only two had been unsuccessful, and these had only been at the diggings a few days.

One family on board interested me very much. It consisted of father, mother, and two children. The eldest, a little girl, had been born some time before they left England. Her brother was a sturdy fellow of two years old, born in the colonies soon after their arrival. He could just toddle about the deck, where he was everlastingly looking for "dold," and "nuddets." The whole family had been at the diggings for nine months, and were returning with something more than 2,000 pounds worth of gold. In England it had been hard work to obtain sufficient food by the most constant labour; they had good reason to be thankful for the discovery of the gold-fields.

Saturday, November 27, was forty-eight hours long, or two days of the same name and date. Sailing right round the world in the direction of from west to east, we gained exactly twenty-four hours upon those who stay at home; and we were therefore obliged to make one day double to prevent finding ourselves wrong in our dates and days on our arrival in England. Melbourne is about ten hours before London, and therefore night, and day are reversed.

Rapidly it became cooler, for the winds were rather contrary, and drove us much farther south than was needed. We were glad to avail ourselves of our opossum rugs to keep ourselves warm. One of these rugs is quite sufficient covering of a night in the coldest weather, and imparts as much heat as a dozen blankets. They are made from the skins of the opossums, sewn together by the natives with the sinews of the same animal. Each skin is about twelve inches by eight, or smaller; and as the rugs are generally very large, they contain sometimes as many as eighty skins. They may be tastefully arranged, as there is a great difference in the colours; some being like a rich sable, others nearly black, and others again of a grey and light brown. The fur is long and silky. At one time a rug of this description was cheap enough--perhaps as much as two sovereigns but the great demand for them by diggers, &c., has made them much more scarce, and it now requires a ten pound-note to get a good one. The best come from Van Diemen's Land. In summer they are disagreeable, as they harbour insects.

However, whilst rounding Cape Horn, in the coldest weather I ever experienced, we were only too happy to throw them over us during the nights.

One morning we were awakened by a great confusion on deck. Our ship was ploughing through a quantity of broken ice. That same afternoon, we

sighted an immense iceberg about ten miles from us. Its size may be imagined from the fact, that, although we were sailing at a rate of ten knots an hour, we kept it in sight till dark. This was on the 3rd of December.

We soon rounded the Horn, and had some very rough weather. One of the sailors fell off the jib-boom; and the cry of "man overboard" made our hearts beat with horror. Every sail was on; we were running right before the wind, and the waves were mountains high, a boat must have been swamped; and long before we could "bout ship", he had sunk to rise no more.

After rounding Cape Horn, we made rapid progress; by Christmas Day, we were in the Tropics. It was not kept with much joviality, for water and food were running scarce. Provisions were so dear in Melbourne, that they had laid in a short allowance of everything, and our captain had not anticipated half so many passengers. We tried, therefore, to put into St. Helena, but contrary winds preventing us, we sailed back again to the South American coast, and anchored off Pernambuco. It was providential that economical intentions made our captain prefer this port, for had we touched at Rio, we should have encountered the yellow fever, which we afterwards heard was raging there.

Pernambuco is apparently a very pretty place. We were anchored about four miles from the town, so had a good view of the coast. I longed to be on shore to ramble beneath the elegant cocoa-nut-trees. The weather was intensely hot, for it was in the commencement of January; and the boats full of fruit, sent from the shore for sale, were soon emptied by us. I call them boats, but they are properly termed catamarans. They are made of logs of wood lashed securely together; they have a sail and oars but no sides, so the water rushes over, and threatens every moment to engulf the frail conveyance; but no, the wood is too light for that. The fruits brought us from shore were oranges, pine-apples, water-melons, limes, bananas, cocoa-nuts, &c., and some yams, which were a good substitute for potatoes. The fruit was all very good, and astonishingly cheap; our oranges being green, lasted till we reached England. Some of our passengers went on shore, and returned with marvellous accounts of the dirtiness and narrowness of the streets, and the extremely NATURAL costume of the natives.

We remained here about four days, and then, with favourable winds, pursued our voyage at an average rate of ten or twelve knots an hour. As we neared the English coast, our excitement increased to an awful height; and for those who had been many years away, I can imagine every trivial delay was fraught with anxiety.

But we come in sight of land; and in spite of the cold weather, for it is now February, 1853, every one rushes to the deck. On we go; at last we are in the Downs, and then the wind turned right against us.

Boats were put off from the Deal beach. The boatmen there rightly calculated that lucky gold-diggers wouldn't mind paying a pound a-piece to get ashore, so they charged that, and got plenty of customers

notwithstanding.

On Sunday, the 27th of February, I again set foot on my native land. It was evening when we reached the shore, and there was only an open vehicle to convey us to the town of Deal itself. The evening was bitterly cold, and the snow lay upon the ground. As we proceeded along, the sounds of the Sabbath bell broke softly on the air. No greeting could have been more pleasing or more congenial to my feelings.

Chapter XVIII.

CONCLUSION

As I trust that, in the foregoing pages, I have slightly interested my readers in "our party," the following additional account of their movements, contained in letters addressed to me by my brother, may not be quite uninteresting.

The Ovens diggings are on the river of the same name, which takes its rise in the Australian Alps, and flows into the Murray. As these Alps separate New South Wales from Victoria, these diggings belong to the latter province. They are about forty miles from the town of Albury. They are spread over a large space of ground. The principal localities are Spring and Reid's Creeks.

Now for the letters.

"Melbourne, January 5, 1853.

"My dear E--,

"You'll be surprised at the heading of this but the Ovens are not to my taste, and I'm off again with Frank and Octavius to Bendigo tomorrow. I suppose you'll like to hear of our adventures up to the Ovens, and the reasons for this sudden change of plans. We left Melbourne the Monday after you sailed, and camped out half-way to Kilmore, a little beyond the 'Lady of the Lake.' The day was fine, but the dust made us wretched. Next day, we reached Kilmore--stopped there all night. Next day on again, and the farther we went, the more uncivilized it became--hills here, forests there, as wild and savage as any one could desire. It was 'bushing it' with a vengeance. This lasted several days. Once we lost our road, and came, by good luck, to a sort of station. They received us very hospitably, and set us right next morning. Four days after, we came to the Goulburn river. There was a punt to take us over, and a host of people (many from Bendigo) waiting to cross. Three days after, we pitched out tents at the Ovens. Here I soon saw it was no go. There was too much water, and too little gold;

and even if they could knock the first difficulty on the head, I don't think they could do the same to the second. In my own mind, I think it impossible that the Ovens will ever turn out the second Bendigo that many imagine. Hundreds differ from me, therefore it's hundreds to one that I'm wrong. The average wages, as far as I can judge, are an ounce a-week; some much more, many much less. We did not attempt digging ourselves. Eagle Hawk shallowness has spoilt us, for not even Octavius (who, you know of old, was a harder worker than either Frank or self) thinks it worth digging through fourteen or sixteen feet of hard clay for the mere pleasure of exercising our limbs. Provisions there were not at the high price that many supposed they would be, but quite high enough, Heaven knows! Meat was very scarce and bad, and flour all but a shilling a pound; and if the fresh arrivals keep flocking in, and no greater supply of food, it will get higher still. We stayed there two weeks, then brought our dray back again, and are now busy getting ready for a fresh start to Bendigo. Among other things we shall take, are lemonade and ginger-beer powders, a profitable investment, though laughable. The weather is very hot--fancy 103 degrees in the shade. Water is getting scarce."

* * * * *

"Have seen all our friends in Melbourne except Richard, who left for England a fortnight ago. Jessie is well, and growing quite pretty. She says she is extremely happy, and sends such a number of messages to you, that I'll write none, for fear of making a mistake. Will write again soon."

* * * * *

"Your affectionate brother, in haste,
"----"

"Melbourne, April 17, 1853.

"My dear E----,

"I suppose you've thought I was buried in my hole, or 'kilt' by bushrangers in the Black Forest; but I've been so occupied in the worship of Mammon, as to have little thoughts for anything else.

* * * * *

"We made a good thing of our last two speculations. Ginger-beer and lemonade, or lemon kali, at sixpence a tiny glass, paid well. A successful digger would drink off a dozen one after another. Some days, we have taken ten pounds in sixpences at this fun. What they bought of us wouldn't harm them, but many mix up all sorts of injurious articles to sell; but our consciences, thank God! are not colonised sufficiently for that. We have had steady good luck in the digging line (for we combine everything), and after this next trip, mean to dissolve partnership.

* * * * *

"Octavius talks of going out as overseer, or something of that sort, to some squatter in New South Wales for a year or so, just to learn the system, &c., and then, if possible, take a sheep-run himself. Frank means to send for Mrs. Frank and small Co. He says he shall stay in Victoria for some years. I do believe he likes the colony. As for myself, I hope to see the last of it in six weeks' time.

* * * * *

"Hurrah for Old England!--no place like it.

* * * * *

"Your very affectionate brother,
"----"

With a cordial assent to the last few words, I conclude these pages.

APPENDIX

WHO SHOULD EMIGRATE?

The question of "Who should emigrate?" has now become one of such importance (owing to the number who are desirous of quitting their native land to seek a surer means of subsistence in our vast colonial possessions), that any book treating of Australia would be sadly deficient were a subject of such universal interest to be left unnoticed; and where there are so many of various capabilities, means and disposititons, in need of guidance and advice as to the advantage of their emigrating, it is probable that the experience of any one, however slight that experience may be, will be useful to some.

Any one to succeed in the colonies must take with him a quantity of self-reliance, energy, and perseverance; this is the best capital a man can have. Let none rely upon introductions--they are but useless things at the best--they may get you invited to a good dinner; but now that fresh arrivals in Melbourne are so much more numerous than heretofore, I almost doubt if they would do even that. A quick, clever fellow with a trade of his own, inured to labour, and with a light heart, that can laugh at the many privations which the gipsy sort of life he must lead in the colonies will entail upon him; any one of this description cannot fail to get on. But for the number of clerks, shopmen, &c., who daily arrive in Australia, there is a worse chance of their gaining a

livelihood than if they had remained at home. With this description of labour the colonial market is largely overstocked; and it is distressing to notice the number of young men incapable of severe manual labour, who, with delicate health, and probably still more delicately filled purses, swarm the towns in search of employment, and are exposed to heavy expenses which they can earn nothing to meet. Such men have rarely been successful at the diggings; the demand for them in their accustomed pursuits is very limited in proportion to their numbers; they gradually sink into extreme poverty--too often into reckless or criminal habits--till they disappear from the streets to make way for others similarly unfortunate.

A little while since I met with the histories of two individuals belonging to two very different classes of emigrants; and they are so applicable to this subject, that I cannot forbear repeating them.

The first account is that of a gentleman who went to Melbourne some eight months ago, carrying with him a stock of elegant acquirements and accomplishments, but little capital. He is now in a starving condition, almost with-out the hope of extrication, and is imploring from his friends the means to return to England, if he live long enough to receive them. The colours in which he paints the colonies are deplorable in the extreme.

The other account is that of a compositor who emigrated much about the same time. He writes to his former office-mates that he got immediate and constant employment at the rate of 7 pounds per week, and naturally thinks that there is no place under the sun like Melbourne. Both emigrants are right. There is no better place under the sun than Melbourne for those who can do precisely what the Melbourne people want; and which they must and will have at any price; but there is no worse colony to which those can go who have not the capabilities required by the Melbourne people. They are useless and in the way, their accomplishments are disregarded, their misfortunes receive no pity; and, whilst a good carpenter or bricklayer would make a fortune, a modern Raphael might starve.

But even those possessed of every qualification for making first-class colonists, will at first meet with much to surprise and annoy them, and will need all the energy they possess, to enable them to overcome the many disagreeables which encounter them as soon as they arrive.

Let us, for example, suppose the case of an emigrant, with no particular profession or business, but having a strong constitution, good common sense, and a determination to bear up against every hardship, so that in the end it leads him to independence. Let us follow him through the difficulties that bewilder the stranger in Melbourne during the first few days of his arrival.

The commencement of his dilemmas will be that of getting his luggage from the ship; and so quickly do the demands for pounds and shillings fall upon him, that he is ready to wish he had pitched half his "traps" over-board. However, we will suppose him at length safely landed on the

wharf at Melbourne, with all his boxes beside him. He inquires for a store, and learns that there are plenty close at hand; and then forgetting that he is in the colonies, he looks round for a porter and truck, and looks in vain. After waiting as patiently as he can for about a couple of hours, he manages to hire an empty cart and driver; the latter lifts the boxes into the conveyance (expecting, of course, his employer to lend a hand), smacks his whip, and turns down street after street till he reaches a tall, grim-looking building, in front of which he stops, with a "That ere's a store," and a demand for a sovereign, more or less. This settled, he coolly requests the emigrant to assist him in unloading, and leaves him to get his boxes carried inside as best he can. Perhaps some of the storekeeper's men come to the rescue, and with their help the luggage is conveyed into the store-room (which is often sixty or eighty feet in length), where the owner receives a memorandum of their arrival. Boxes or parcels may remain there in perfect safety for months, so long as a shilling a week is paid for each.

Our emigrant, having left his property in security, now turns to seek a lodging for himself; and the extreme difficulty of procuring house accommodation, with its natural consequences, an extraordinary rate of rent, startles and amazes him. He searches the city in vain, and betakes himself to the suburbs, where he procures a small, half-furnished room, in a wooden house for thirty shillings a week. The scarcity of houses in proportion to the population, is one of the greatest drawbacks to the colony; but we could not expect it to be otherwise when we remember that in one year Victoria received an addition of nearly 80,000 inhabitants. The masculine portion of these emigrants, with few exceptions, started off at once to the diggings; hence the deficiency in the labour market is only partially filled up by the few who remained behind, and by the fewer still who forsake the gold-fields; whilst the abundance of money, and the deficiency of good workmen, have raised the expenses of building far above the point at which it would be a profitable investment for capital. Meantime, the want is only partially supplied by the wooden cottages which are daily springing up around the boundaries of the city; but this is insufficient to meet the increasing want of shelter, and on the southern bank of the Yarra there are four or five thousand people living in tents. This settlement is appropriately called "Canvas Town."

But let us return to our newly-arrived emigrant.

Having succeeded in obtaining a lodging, he proceeds to purchase some necessary articles of food, and looks incredulously at the shopkeeper when told that butter is 3s. 6d. a pound, cheese, ham, or bacon 2s. to 2s. 6d., and eggs 4s. or 5s. a dozen. He wisely dispenses with such luxuries, and contents himself with bread at 1s. 6d. the four-pound loaf, and meat at 5d. a pound. He sleeps soundly, for the day has been a fatiguing one, and next morning with renewed spirits determines to search immediately for employment. He does not much care what it is at first, so that he earns something; for his purse feels considerably lighter after the many demands upon it yesterday. Before an hour is over, he finds himself engaged to a storekeeper at a rate of

three pounds a-week; his business being to load and unload drays, roll casks, lift heavy goods, &c.; and here we will leave him, for once set going he will soon find a better berth. If he have capital, it is doubtless safely deposited in the Bank until a little acquaintance with the colonies enables him to invest it judiciously; and meanwhile, if wise, he will spend every shilling as though it were his last; but if his capital consists only of the trifle in his purse, no matter, the way he is setting to work will soon rectify that deficiency, and he stands a good chance in a few years of returning to England a comparatively wealthy man.

To those of my own sex who desire to emigrate to Australia, I say do so by all means, if you can go under suitable protection, possess good health, are not fastidious or "fine-lady-like," can milk cows, churn butter, cook a good damper, and mix a pudding. The worst risk you run is that of getting married, and finding yourself treated with twenty times the respect and consideration you may meet with in England. Here (as far as number goes) women beat the "lords of creation;" in Australia it is the reverse, and, there we may be pretty sure of having our own way.

But to those ladies who cannot wait upon themselves, and whose fair fingers are unused to the exertion of doing anything useful, my advice is, for your own sakes remain at home. Rich or poor, it is all the same; for those who can afford to give 40 pounds a-year to a female servant will scarcely know whether to be pleased or not at the acquisition, so idle and impertinent are they; scold them, and they will tell you that "next week Tom, or Bill, or Harry will be back from the diggings, and then they'll be married, and wear silk dresses, and be as fine a lady as yourself;" and with some such words will coolly dismiss themselves from your service, leaving their poor unfortunate mistress uncertain whether to be glad of their departure or ready to cry because there's nothing prepared for dinner, and she knows not what to set about first.

For those who wish to invest small sums in goods for Australia, boots and shoes, cutlery, flash jewellery, watches, pistols (particulary revolvers), gunpowder, fancy articles, cheap laces, and baby-linen offer immense profits.

The police in Victoria is very inefficient, both in the towns and on the roads. Fifteen persons were stopped during the same afternoon whilst travelling on the highway between Melbourne and St. Kilda. They were robbed, and tied to trees within sight of each other--this too in broad daylight. On the roads to the diggings it is still worse; and no one intending to turn digger should leave England without a good supply of fire-arms. In less than one week more than a dozen robberies occurred between Kyneton and Forest Creek, two of which terminated in murder. The diggings themselves are comparatively safe--quite as much so as Melbourne itself--and there is a freemasonry in the bush which possesses an irresistible charm for adventurous bachelors, and causes them to prefer the risk of bushrangers to witnessing the dreadful scenes that are daily and hourly enacting in a colonial town. Life in

the bush is wild, free and independent. Healthy exercise, fine scenery, and a clear and buoyant atmosphere, maintain an excitement of the spirits and a sanguineness of temperament peculiar to this sort of existence; and many are the pleasant evenings, enlivened with the gay jest or cheerful song, which are passed around the bush fires of Australia.

The latest accounts from the diggings speak of them most encouragingly. Out of a population of 200,000 (which is calculated to be the number of the present inhabitants of Victoria), half are said to be at the gold-fields, and the average earnings are still reckoned at nearly an ounce per man per week. Ballarat is again rising into favour, and its riches are being more fully developed. The gold there is more unequally distributed than at Mount Alexander, and therefore the proportion of successful to unsuccessful diggers is not so great as at the latter place. But then the individual gains are in some cases greater. The labour is also more severe than at the Mount or Bendigo, as the gold lies deeper, and more numerous trials have to be made before the deposits are struck upon.

The Ovens is admitted to be a rich gold-field, but the work there is severely laborious, owing to a super-abundance of water.

The astonishing mineral wealth of Mount Alexander is evidenced by the large amounts which it continues to yield, notwithstanding the immense quantities that have already been taken from it. The whole country in that neighbourhood appears to be more or less auriferous.

Up to the close of last year the total supposed amount of gold procured from the Victoria diggings, is 3,998,324 ounces, which, when calculated at the average English value of 4 pounds an ounce, is worth nearly SIXTEEN MILLIONS STERLING. One-third of this is distinctly authenticated as having come down by escort during the three last mouths of 1852.

In Melbourne the extremes of wealth and poverty meet, and many are the anecdotes of the lavish expenditure of successful diggers that are circulated throughout the town. I shall only relate two which fell under my own observation.

Having occasion to make a few purchases in the linen drapery line, I entered a good establishment in Collins Street for that purpose. It was before noon, for later in the day the shops are so full that to get a trifling order attended to would be almost a miracle. There was only one customer in the shop, who was standing beside the counter, gazing with extreme dissatisfaction upon a quantity of goods of various colours and materials that lay there for his inspection. He was a rough-looking customer enough, and the appearance of his hands gave strong indication that the pickaxe and spade were among the last tools he had handled.

"It's a SHINY thing that I want," he was saying as I entered.

"These are what we should call shining goods," said the shopman, as he

held up the silks, alpacas, &c., to the light.

"They're not the SHINY sort that I want," pursued the digger, half-doggedly, half-angrily. "I'll find another shop; I guess you won't show your best goods to me--you think, mayhap, I can't pay for them--but I can, though," and he laid a note for fifty pounds upon the counter, adding, "maybe you'll show me some SHINY stuff now!"

Unable to comprehend the wishes of his customer, the shopman called to his assistance the master of the establishment, who being, I suppose, of quicker apprehension, placed some satins before him.

"I thought the paper would help you find it. I want a gown for my missus. What's the price?"

"Twenty yards at one-ten--thirty pounds. That do, Sir?"

"No; not good enough!" was the energetic reply.

The shrewd shopkeeper quickly fathomed his customer's desires, and now displayed before him a rich orange-coloured satin, which elicited an exclamation of delight.

"Twenty-five yards--couldn't sell less, it's a remnant--at three pounds the yard."

"That's the go!" interrupted the digger, throwing some more notes upon the counter. "My missus was married in a cotton gown, and now she'll have a real gold 'un!"

And seizing the satin from the shopkeeper, he twisted up the portion that had been unrolled for his inspection, placed the whole under his arm, and triumphantly walked out of the shop, little thinking how he had been cheated.

"A 'lucky digger' that," observed the shopman, as he attended to my wants.

I could not forbear a smile, for I pictured to myself the digger's wife mixing a damper with the sleeves of her dazzling satin dress tucked up above her elbows.

A few days after, a heavy shower drove me to take shelter in a pastry-cook's, where, under the pretence of eating a bun, I escaped a good drenching. Hardly had I been seated five minutes, when a sailor-looking personage entered, and addressed the shopwoman with: "I'm agoing to be spliced to-morrow, young woman; show us some large wedding-cakes."

The largest (which was but a small one) was placed before him, and eighteen pounds demanded for it. He laid down four five-pound notes upon the counter, and taking up the cake, told her to "keep the change to buy ribbons with."

"Pleasant to have plenty of gold-digging friends," I remarked, by way of saying something.

"Not a friend," said she, smiling. "I never saw him before. I expect he's only a successful digger."

Turn we now to the darker side of this picture.

My favourite walk, whilst in Melbourne, was over Prince's Bridge, and along the road to Liardet's Beach, thus passing close to the canvas settlement, called Little Adelaide. One day, about a week before we embarked for England, I took my accustomed walk in this direction, and as I passed the tents, was much struck by the appearance of a little girl, who, with a large pitcher in her arms, came to procure some water from a small stream beside the road. Her dress, though clean and neat, bespoke extreme poverty; and her countenance had a wan, sad expression upon it which would have touched the most indifferent beholder, and left an impression deeper even than that produced by her extreme though delicate beauty.

I made a slight attempt at acquaintanceship by assisting to fill her pitcher, which was far too heavy, when full of water, for so slight a child to carry, and pointing to the rise of ground on which the tents stood, I inquired if she lived among them.

She nodded her head in token of assent.

"And have you been long here? and do you like this new country?" I continued, determined to hear if her voice was as pleasing as her countenance.

"No!" she answered quickly; "we starve here. There was plenty of food when we were in England;" and then her childish reserve giving way, she spoke more fully of her troubles, and a sad though a common tale it was.

Some of the particulars I learnt afterwards. Her father had held an appointment under Government, and had lived upon the income derived from it for some years, when he was tempted to try and do better in the colonies. His wife (the daughter of a clergyman, well educated, and who before her marriage had been a governess) accompanied him with their three children. On arriving in Melbourne (which was about three months previous), he found that situations equal in value, according to the relative prices of food and lodging, to that which he had thrown up in England were not so easily procured as he had been led to expect. Half desperate, he went to the diggings, leaving his wife with little money, and many promises of quick remittances of gold by the escort. But week followed week, and neither remittances nor letters came. They removed to humbler lodgings, every little article of value was gradually sold, for, unused to bodily labour, or even to sit for hours at the needle, the deserted wife could earn but little. Then sickness came; there were no means of paying for medical advice, and one child

died. After this, step by step, they became poorer, until half a tent in Little Adelaide was the only refuge left.

As we reached it, the little girl drew aside the canvas, and partly invited me to enter. I glanced in; it was a dismal sight. In one corner lay the mother, a blanket her only protection from the humid soil, and cowering down beside her was her other child. I could not enter; it seemed like a heartless intrusion upon misery; so, slipping the contents of my purse (which were unfortunately only a few shillings) into the little, girl's hand, I hurried away, scarcely waiting to notice the smile that thanked me so eloquently. On arriving at home, I found that my friends were absent, and being detained by business, they did not return till after dusk, so it was impossible for that day to afford them any assistance. Early next morning we took a little wine and other trifling articles with us, and proceeded to Little Adelaide. On entering the tent, we found that the sorrows of the unfortunate mother were at an end; privation, ill health and anxiety had claimed their victim. Her husband sat beside the corpse, and the golden nuggets, which in his despair he had flung upon the ground, formed a painful contrast to the scene of poverty and death.

The first six weeks of his career at the diggings had been most unsuccessful, and he had suffered as much from want as his unhappy wife. Then came a sudden change of fortune, and in two weeks more he was comparatively rich. He hastened immediately to Melbourne, and for a whole week had sought his family in vain. At length, on the preceding evening, he found them only in time to witness the last moments of his wife.

Sad as this history may appear, it is not so sad as many, many others; for often, instead of returning with gold, the digger is never heard of more.

In England many imagine that the principal labour at the diggings consists in stooping to pick up the lumps of gold which lie upon the ground at their feet, only waiting for some one to take possession of them. These people, when told of holes being dug in depths of from seven to forty feet before arriving at the desired metal, look upon such statements as so many myths, or fancy they are fabricated by the lucky gold-finders to deter too many others from coming to take a share of the precious spoil. There was a passenger on board the vessel which took me to Australia, who held some such opinions as these, and, although in other respects a sensible man, he used seriously to believe that every day that we were delayed by contrary winds he could have been picking up fifty or a hundred pounds worth of gold had he but been at the diggings. He went to Bendigo the third day after we landed, stayed there a fortnight, left it in disgust, and returned to England immediately--poorer than he had started.

This is not an isolated case. young men of sanguine dispositions read the startling amounts of gold shipped from the colonies, they think of the "John Bull Nugget" and other similar prizes, turn a deaf ear when you speak of blanks, and determinately overlook the vast amount of

labour which the gold diggings have consumed. Whenever I meet with this class of would-be emigrants, the remarks of an old digger, which I once over heard, recur to my mind. The conversation at the time was turned upon the subject of the many young men flocking from the "old country" to the gold-fields, and their evident unfitness for them. "Every young man before paying his passage money," said he, "should take a few days' spell at well-sinking in England; if he can stand that comfortably, the diggings won't hurt him."

Many are sadly disappointed on arriving in Victoria, at being unable to invest their capital or savings in the purchase of about a hundred acres of land, sufficient for a small farm. I have referred to this subject before, but cannot resist adding some facts which bear upon it.

By a return of the LAND SALES of Victoria, from 1837 to 1851, it appears that 380,000 acres of land were sold in the whole colony; and the sum realized by Government was 700,000 pounds. In a return published in 1849, it is stated that there were THREE persons who each held singly more land in their own hands than had been sold to all the rest of the colony in fourteen years, for which they paid the sum of 30 pounds each per annum. Yet, whilst 700,000 pounds is realized by the sale of land, and not 100 pounds a-year gained by LETTING three times the quantity, the Colonial Government persists in the latter course, in spite of the reiterated disapprobation of the colonists themselves; and by one of the last gazettes of Governor La Trobe, he has ordered 681,700 acres, or 1,065 square miles, to be given over to the squatters. The result of this is, that many emigrants landing in Victoria are compelled to turn their steps towards the sister colony of Adelaide. There was a family who landed in Melbourne whilst I was there. It consisted of the parents, and several grown-up sons and daughters. The father had held a small tenant farm in England, and having saved a few hundreds, determined to invest it in Australian land. He brought out with him many agricultural implements, an iron house, &c.; and on his arrival found, to his dismay, that no less than 640 acres of crown lands could be sold, at a time, at the upset price of one pound an acre. This was more than his capital could afford, and they left for Adelaide. The expenses of getting his goods to and from the ships, of storing them, of supporting his family while in Melbourne, and of paying their passage to Adelaide, amounted almost to 100 pounds. Thus he lost nearly a fourth of his capital, and Victoria a family who would have made good colonists.

Much is done now-a-days to assist emigration, but far greater exertions are needed before either the demand for labour in the colonies or the over-supply of it in England can be exhausted. Pass down the best streets of Melbourne: you see one or two good shops or houses, and on either side an empty spot or a mass of rubbish. The ground has been bought, the plans for the proposed budding are all ready. Then why not commence?--there are no workmen. Bricks are wanted, and 15 pounds a thousand is offered; carpenters are advertized for at 8 pounds a week; yet the building makes no progress--there are no workmen. Go down towards the Yarra, and an unfinished Church will attract attention. Are funds wanting for its completion? No. Thousands were subscribed in one day, and would

be again were it necessary; but that building, like every other, is stopped for lack of workmen. In vain the bishop himself published an appeal to the various labourers required offering the very highest wages; others offered higher wages still, and the church (up to the time I left Victoria) remained unfinished. And yet, whilst labour is so scarce, so needed in the colonies, there are thousands in our own country ABLE AND WILLING TO WORK, whose lives here are one of prolonged privation, whose eyes are never gladdened by the sight of nature, who inhale no purer atmosphere than the tainted air of the dark courts and dismal cellars in which they herd. Send them to the colonies--food and pure air would at least be theirs--and much misery would be turned into positive happiness.

I heard of a lady who every year sent out a whole family from the poor but hard-working classes to the colonies (it was through one of the objects of her thoughtful benevolence that this annual act became known to me), and what happiness must it bring when she reflects on the heartfelt blessings that are showered upon her from the far-off land of Australia. Surely, among the rich and the influential, there are many who, out of the abundance of their wealth, could "go and do likewise."

THE END.

End of this Project Gutenberg etext of A Lady's Visit to the Gold Diggings of Australia in 1852-53, by Mrs. Charles (Ellen) Clacy

-53, by Mrs. Charles (Ellen) Clacy

fore arriving at the desired metal, look upon such statements as so many myths, or fancy they are fabricated by the lucky gold-finders to deter too many others from coming to take a share of the precious spoil. There was a passenger on board the vessel which took me to Australia, who held some such opinions as these, and, although in other respects a sensible man, he used seriously to believe that every day that we were delayed by contrary winds he could have been picking up fifty or a hundred pounds worth of gold had he but been at the diggings. He went to Bendigo the third day

after we landed, stayed there a fortnight, left it in disgust, and returned to England immediately--poorer than he had started.

This is not an isolated case. young men of sanguine dispositions read the startling amounts of gold shipped from the colonies, they think of the "John Bull Nugget" and other similar prizes, turn a deaf ear when you speak of blanks, and determinately overlook the vast amount of labour which the gold diggings have consumed. Whenever I meet with this class of would-be emigrants, the remarks of an old digger, which I once over heard, recur to my mind. The conversation at the time was turned upon the subject of the many young men flocking from the "old country" to the gold-fields, and their evident unfitness for them.

"Every young man before paying his passage money," said he, "should take a few days' spell at well-sinking in England; if he can stand that comfortably, the diggings won't hurt him."

Many are sadly disappointed on arriving in Victoria, at being unable to invest their capital or savings in the purchase of about a hundred acres of land, sufficient for a small farm. I have referred to this subject before, but cannot resist adding some facts which bear upon it.

By a return of the LAND SALES of Victoria, from 1837 to 1851, it appears that 380,000 acres of land were sold in the whole colony; and the sum realized by Government was 700,000 pounds. In a return published in 1849, it is stated that there were THREE persons who each held singly more land in their own hands than had been sold to all the rest of the colony in fourteen years, for which they paid the sum of 30 pounds

each per annum. Yet, whilst 700,000 pounds is realized by the sale of land, and not 100 pounds a-year gained by LETTING three times the quantity, the Colonial Government persists in the latter course, in spite of the reiterated disapprobation of the colonists themselves; and by one of the last gazettes of Governor La Trobe, he has ordered 681,700 acres, or 1,065 square miles, to be given over to the squatters. The result of this is, that many emigrants landing in Victoria are compelled to turn their steps towards the sister colony of Adelaide. There was a family who landed in Melbourne whilst I was there. It consisted of the parents, and several grown-up sons and daughters. The father had held a small tenant farm in England, and having saved a few hundreds, determined to invest it in Australian land. He brought out with him many agricultural implements, an iron house, &c.; and on his arrival found, to his dismay, that no less than 640 acres of crown lands could be sold, at a time, at the upset price of one pound an acre. This was more than his capital could afford, and they left for Adelaide. The expenses of getting his goods to and from the ships, of storing them, of supporting his family while in Melbourne, and of paying their passage to Adelaide, amounted almost to 100 pounds. Thus he lost nearly a fourth of his capital, and Victoria a family who would have made good colonists.

Much is done now-a-days to assist emigration, but far greater exertions are needed before either the demand for labour in the colonies or the over-supply of it in England can be exhausted. Pass down the best streets of Melbourne: you see one or two good shops or houses, and on

either side an empty spot or a mass of rubbish. The
